

Dual SPDT Negative Rail Analog Switches with $\pm V_{CC}$ Capability

General Description

The MAX14504/MAX14505/MAX14505A/MAX14506 dual single-pole/double-throw (SPDT) audio switches feature negative signal capability that allows signals from $-V_{CC}$ to $+V_{CC}$ to pass without distortion. They feature high continuous current ratings of 550mA (continuous) and 850mA (pulsed). These analog switches have low on-resistance, low supply current, and operate from a single $+2.3V$ to $+5.5V$ supply.

The MAX14505/MAX14505A have internal shunt switches that discharge the audio amplifier AC-coupling capacitance at the normally open (NO) terminals. This reduces click-and-pop sounds that occur when switching audio signals between precharged points. The MAX14504/MAX14505/MAX14505A/MAX14506 control the switches with control bit, CB, and feature an enable input, \overline{EN} , that place COM in a high-impedance mode.

The MAX14504/MAX14505/MAX14505A/MAX14506 are fully specified to operate from a single $+2.3V$ to $+5.5V$ power supply. These devices are available in a 1.56mm x 2.14mm, 12-bump WLP package, and operate over the $-40^{\circ}C$ to $+85^{\circ}C$ extended temperature range.

Applications

Cell Phones
MP3 Players
Portable Audio Equipment
Speaker Switching

Typical Operating Circuit appears at end of data sheet.

Features

- ◆ Distortion-Free Negative Signal Throughput from $-V_{CC}$ to $+V_{CC}$
- ◆ Internal Shunt Switches Reduce Click/Pop (MAX14505/MAX14505A)
- ◆ Low On-Resistance 0.36Ω (typ)
- ◆ $1m\Omega$ (typ) On-Resistance Flatness
- ◆ COM High Impedance for $\overline{EN} = \text{High}$
- ◆ Low $0.2\mu A$ (max) Shutdown Current (MAX14505A/MAX14506)
- ◆ $+2.3V$ to $+5.5V$ Single-Supply Voltage
- ◆ Small, 1.56mm x 2.14mm, 12-Bump WLP Package

Pin Configuration

Ordering Information/Selector Guide

PART	PIN-PACKAGE	TOP MARK	COM SIGNAL RANGE FOR $\overline{EN} = V_{CC}$	CLICKLESS
MAX14504EWC+	12 WLP	AAH	$\pm V_{CC}$	NO
MAX14505EWC+*	12 WLP	AAI	$\pm V_{CC}$	YES
MAX14505AEWC+	12 WLP	AAK	0 to $+V_{CC}$	YES
MAX14506EWC+*	12 WLP	AAJ	0 to $+V_{CC}$	NO

Note: All devices are specified over the $-40^{\circ}C$ to $+85^{\circ}C$ temperature range.

Dual SPDT Negative Rail Analog Switches with $\pm V_{CC}$ Capability

ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND, unless otherwise noted.)

V_{CC}	-0.3V to +6.0V
NC_{-} , NO_{-} , COM_{-} (Note 1).....	$-V_{CC} - 0.3V$ to $V_{CC} + 0.3V$
NC_{-} , NO_{-} , COM_{-} (MAX14505A/MAX14506, $\overline{EN} = V_{CC}$) (Note 1).....	-0.3V to $V_{CC} + 0.3V$
CB , \overline{EN}	-0.3V to +6V
Continuous Current (NC_{-} , NO_{-} , COM_{-}).....	$\pm 550mA$
Continuous Current on Shunt Switches.....	$\pm 5mA$
Peak Current (NC_{-} , NO_{-} , COM_{-}) (pulsed at 1ms, 10% duty cycle).....	$\pm 850mA$

Continuous Power Dissipation ($T_A = +70^{\circ}C$) for multilayer board:

12-Pin WLP (derate 8.5mW/ $^{\circ}C$ above $+70^{\circ}C$).....	678mW
Operating Temperature Range.....	$-40^{\circ}C$ to $+85^{\circ}C$
Junction Temperature.....	$+150^{\circ}C$
Storage Temperature Range.....	$-65^{\circ}C$ to $+150^{\circ}C$
Package Junction-to-Ambient Thermal Resistance (θ_{JA}) (Note 2).....	$118^{\circ}C/W$
Lead Temperature (soldering).....	$+300^{\circ}C$

Note 1: Signals on NC_{-} , NO_{-} , and COM_{-} exceeding $-V_{CC}$ or $+V_{CC}$ are clamped by internal diodes. For $\overline{EN} \geq V_{IH}$ signals on NC_{-} , NO_{-} , and COM_{-} exceeding 0 or $+V_{CC}$ are clamped by internal diodes (MAX14505A/MAX14506). Limit forward-diode current to maximum current rating.

Note 2: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a 4-layer board. For detailed information on package thermal considerations, refer to www.maxim-ic.com/thermal-tutorial.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

($V_{CC} = +2.3$ to $+5.5V$, $T_A = T_{MIN}$ to T_{MAX} , $C_{NEG} = 3.3nF$, unless otherwise noted. Typical values are at $V_{CC} = +3.0V$, $T_A = +25^{\circ}C$, unless otherwise noted.) (Note 3)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
ANALOG SWITCH						
Analog Signal Range	NC_{-} , NO_{-} , COM_{-}	$V_{\overline{EN}} = 0$	$-V_{CC}$		$+V_{CC}$	V
		$V_{\overline{EN}} = V_{CC}$	(MAX14504/MAX14505)	$-V_{CC}$	$+V_{CC}$

		$V_{CC} = +5.5V$, $V_{EN} = V_{CC}$ (MAX14504/MAX14505)			29	
		$V_{CC} = +3.0V$, $V_{EN} = V_{CC}$ (MAX14505A/MAX14506)			0.15	
		$V_{CC} = +5.5V$, $V_{EN} = V_{CC}$ (MAX14505A/MAX14506)			0.2	
Supply Current Increase with Supply Voltage	I_{CC_CTRL}	$V_{CC} = 5.5V$, $V_{CB} = V_{EN} = 0.5V$ or $1.4V$		2	5	μA
Negative Charge-Pump Output	V_{NEG}	$C_{NEG} = 3.3nF$	$-1.01V_{CC}$	$-V_{CC}$	$-0.95V_{CC}$	V

Note 3: All parameters are production tested at $T_A = +85^\circ C$, and guaranteed by design over the specified temperature range.

Note 4: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal range.

Note 5: All timing is measured using 20% and 80% levels.

Note 6: Off-Isolation = $20\log_{10}[V_{COM_}/(V_{NO_}$ or $V_{NC_})]$, $V_{COM_}$ = output, $V_{NO_}$ or $V_{NC_}$ = input to off switch.

Note 7: Between any two switches.

Pin Description

PIN	NAME	FUNCTION
A1	NO2	Analog Switch 2, Normally Open Terminal
A2	NEG	Negative Supply Voltage Output. Connect NEG to GND with a 3.3nF capacitor. Do not use NEG to power any external circuitry.
A3	V _{CC}	Positive Supply Voltage Input. Connect V _{CC} to a +2.3V to +5.5V supply voltage. Bypass V _{CC} to GND with a 0.1µF ceramic capacitor placed as close as possible to the device.
A4	NO1	Analog Switch 1, Normally Open Terminal
B1	COM2	Analog Switch 2, Common Terminal
B2	\overline{EN}	Active-Low Enable Input. Drive \overline{EN} high to put switches in a high-impedance mode. Shunt click/pop switches are not affected by the state of \overline{EN} . The MAX14505A/MAX14506 enter a low current state when \overline{EN} is driven high.
B3, C3	GND	Ground
B4	COM1	Analog Switch 1, Common Terminal
C1	NC2	Analog Switch 2, Normally Closed Terminal
C2	CB	Control Bit Input. CB controls switch 1 and switch 2. See the <i>Functional Diagram/Truth Table</i> .
C4	NC1	Analog Switch 1, Normally Closed Terminal

Dual SPDT Negative Rail Analog Switches with $\pm V_{CC}$ Capability

Detailed Description

The MAX14504/MAX14505/MAX14505A/MAX14506 are low on-resistance, low-voltage, dual SPDT analog switches that operate from a +2.3V to +5.5V single supply. These devices feature a negative signal capability that allows signals as low as $-V_{CC}$ to pass through without distortion.

The MAX14504/MAX14505/MAX14505A/MAX14506 have an enable input \overline{EN} to put the switches in a high-

impedance mode. When $\overline{EN} = V_{CC}$, the MAX14504/MAX14505 terminals have a signal range of $-V_{CC}$ to $+V_{CC}$. The MAX14505A/MAX14506 terminals have a signal range of 0 to $+V_{CC}$. The MAX14505A/MAX14506 feature a low supply current when $\overline{EN} = V_{CC}$.

The MAX14505/MAX14505A have internal shunt switches on both NO1 and NO2 terminals to suppress click-and-pop sounds that can occur when switching audio signals between precharged points.

Functional Diagram/Truth Table

MAX14504/MAX14505/MAX14505A/MAX14506

Dual SPDT Negative Rail Analog Switches with $\pm V_{CC}$ Capability

Digital Control Inputs

The MAX14504/MAX14505/MAX14505A/MAX14506 logic inputs accept up to +5.5V, regardless of supply voltage. For example, with a +3.3V supply, CB and \overline{EN} can be driven low to GND and high to +5.5V, allowing for mixed logic levels in a system. Using logic levels of $V_{IL} = 0$ to $V_{IH} \geq V_{CC}$ reduces supply current.

Analog Signal Levels

These devices pass signals from $-V_{CC}$ to $+V_{CC}$ with minimal distortion and very little change in on-resistance (see the *Typical Operating Characteristics*). The switches are bidirectional; therefore, the NO_, NC_, and COM_ terminals can be used as either inputs or outputs.

Click-and-Pop Suppression

The MAX14505/MAX14505A have a shunt switch on NO1 and NO2 terminals to automatically discharge any capacitance when they are not connected to COM1 and COM2. The shunt switch reduces audible click-

and-pop sounds that occur when switching between capacitively coupled audio sources. Audible clicks and pops are caused when a step DC voltage is switched into the speaker. The DC step transients are reduced by automatically discharging the side that is not connected to the COM terminal, reducing any residual DC voltage and reducing clicks and pops.

Applications Information

Power-Supply Sequencing

Proper power-supply sequencing is recommended for all CMOS devices. Improper supply sequencing can force the switch into latch-up, causing it to draw excessive supply current. The only way out of latch-up is to remove all signals and power and then reapply properly. Connect all ground pins first, apply power to V_{CC} , and finally apply signals to NO_, NC_, and COM_. Follow the reverse order upon power-down.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
