Safety Information

The CY4500 EZ-PD[™] Protocol Analyzer is intended for use as a development, demonstration, and debugging platform for hardware or software in a laboratory environment. The analyzer is not intended for general consumer use. It generates, uses, and can radiate radio frequency energy. It has not been tested for compliance with the limits applicable under any standard. Operation of the equipment may cause interference with radio communications, in which case users, at their own expense, will be required to take whatever measures may be required to correct this interference.

Attaching additional wiring to this product or modifying the product operation from the factory default may affect its performance and cause interference with other apparatus in the immediate vicinity. If such interference is detected, suitable mitigating measures must be taken.

The CY4500 EZ-PD[™] Protocol Analyzer as shipped from the factory has been verified to meet with requirements of CE as a Class A product.

| The CY4500 EZ-PD [™] Protocol Analyzer board contains electrostatic discharge (ESD)- sensitive devices. Electrostatic charges readily accumulate on the human body and any equipment, which can cause a discharge without detection. Permanent damage may occur to devices subjected to high-energy discharges. Proper ESD precautions are recommended to avoid performance degradation or loss of functionality. Store unused CY4500 EZ-PD [™] Protocol Analyzer board in the protective shipping package. |
|---|
| End-of-Life/Product Recycling The end-of-life cycle for this analyzer is five years from the date of manufacture mentioned on the back of the box. Contact the nearest recycler to discard the analyzer. |

General Safety Instructions

ESD Protection

ESD can damage boards and associated components. If an ESD workstation is not available, use appropriate ESD protection by wearing an antistatic wrist strap attached to the chassis ground (any unpainted metal surface) on the board when handling parts.

Handling Boards

The board provided with CY4500 EZ-PD[™] Protocol Analyzer is sensitive to ESD. This also applies to the boards that are provided with a plastic casing when they are removed from the casing. Hold the boards only by the edges. After removing a board from the box/casing, place it on a grounded, static-free surface. Use a conductive foam pad, if available. Do not slide the board over any surface.

1. Introduction

Cypress's CY4500 EZ-PD™ Protocol Analyzer supports protocol analysis of the USB-PD and USB Type-C specifications. It performs non-intrusive probing and captures accurate protocol messages on the CC line. This analyzer consists of Cypress's programmable MCU (PSoC[®] 5LP), which monitors data on the CC lines and sends this data to the host application over a USB interface. The Type-C plug and Type-C receptacle on this analyzer provide a pass-through for the Power Delivery (PD) Packets transmitted between each Type-C PD connection. The processor MCU taps these Power Delivery Packets without disturbing the system and transfers them over the USB interface to a PC running the host application.

1.1 Analyzer Contents

The CY4500 EZ-PD[™] Protocol Analyzer consists of the following contents:

- CY4500 EZ-PD[™] Protocol Analyzer board enclosed in a transparent casing
- USB 2.0 Type-A to Micro-B Cable
- Jumper wires (6 in number)
- Quick Start Guide

1.1.1 Hardware Not Included With the Analyzer

The CY4500 EZ-PD[™] Protocol Analyzer Guide references the CY4531 CCG3 EVK as a Type-C host device for all the examples covered in this document. While it is highly recommended to have the CY4531 CCG3 EVK as a Type-C host device, it is not required and can be replaced with any USB Type-C host device, such as a notebook with a Type-C port. The following items are not included with the Analyzer:

- A USB Type-C host device (for example, a notebook with a Type-C port, CY4531 EZ-PD[™] CCG3 Evaluation Kit (EVK)) and a USB Type-C client device.
- Type-C Power Adapter that supports USB-PD. Recommended power adapters are listed in the Recommended Adapters and Cables section.
- As an option, Type-C to DisplayPort/HDMI/VGA adapters that can be used as Type-C devices for running the examples in this user guide. Recommended adapters are listed in the Recommended Adapters and Cables section.

1.2 Getting Started

Once the steps to install the analyzer as described in Analyzer Installation chapter are completed, refer to the Analyzer Operation chapter for instructions on how to run a quick demonstration and observe analyzer functionality.

1.2.1 CY4500 EZ-PD™ Protocol Analyzer Installation

The CyInstaller installs the CY4500 EZ-PD[™] Protocol Analyzer along with the EZ-PD[™] Analyzer Utility software and all necessary CYUSB3.0 drivers. Refer to the Analyzer Installation chapter for more details.

1.3 List of Recommended Hardware

1.3.1 Recommended Host and Client Devices

See Table 1-1 for different options on choosing USB Type-C host and client devices. This analyzer is not shipped with any of the listed devices. A Type-C Power Adapter is required to run the example in the Analyzer Operation chapter.

| No. | Description | Manufacturer | Vendor Link |
|-----|--|--------------|-------------------|
| | Host Devices | | |
| 1 | Apple MacBook | Apple | Apple Store Link |
| 2 | Google Chrome book | Google | Google Store Link |
| 3 | CY4501 CCG1 Development Kit (Host Board) | Cypress | Cypress Link |
| 4 | CY4531 EZ-PD™ CCG3 EVK | Cypress | Cypress Link |
| 5 | CY4541 EZ-PD™ CCG4 EVK | Cypress | Cypress Link |
| | Client Devices | | |
| 1 | Type-C Power Adapter that supports USB-PD | Apple | Apple Store Link |
| 2 | Type-C to Digital AV Multiport Adapter | Apple | Apple Store Link |
| 3 | CY4501 CCG1 Development Kit (Client Board) | Cypress | Cypress Link |

Table 1-1. List of Recommended Host & Client Devices

1.3.2 Recommended Adapters and Cables

See Table 1-2 for different options to obtain a set of cables recommended to work with Type-C host/client devices. This analyzer is not shipped with these adapters or cables.

| No. | Description | Manufacturer | MPN | Vendor Link |
|-----|---|---------------|----------------|-------------|
| 1 | Type-C to Display Port Adapter | Belinda | - | Amazon Link |
| 2 | Type-C to HDMI Adapter | Cable Matters | - | Amazon Link |
| 3 | Type-C to VGA Adapter | Cable Matters | - | Amazon Link |
| 4 | DisplayPort to DisplayPort Cable (6", gold plated) | Cable Matters | 102005-6 | Amazon Link |
| 5 | Mini DisplayPort to DisplayPort Cable (3", gold plated) | Cable Matters | 101007-BLACK-3 | Amazon Link |

Table 1-2. List of Recommended Adapters and Cables

2. Analyzer Installation

This chapter describes the steps to install the CY4500 EZ-PD™ Protocol Analyzer.

2.1 CY4500 EZ-PD™ Protocol Analyzer Software Installation

To install the analyzer software, follow these steps:

1. Download the latest analyzer software setup *CY4500Setup.exe* file from the Cypress website http://www.cypress.com/CY4500. This package contains the software EZ-PD Analyzer Utility for running the analyzer and the relevant documentation (User Guide, Quick Start Guide, and Release Notes). Double-click on the executable to start the installation. Click **Next** when the screen shown in Figure 2-1 appears.

Figure 2-1. CY4500 EZ-PD[™] Protocol Analyzer Installer Screen

2. Select the required **Installation Type** and click **Next** to start the install (Figure 2-2). For first-time installation, it is recommended that you select "Typical" as the **Installation Type**.

| Figure | 2-2. | Installation | Wizard |
|--------|------|--------------|--------|
|--------|------|--------------|--------|

| Choose the type of installation Product: CY4500 EZ-PD Protocol Analyzer Installation Type: Typical Installs the most common features of CY4500 EZ-PD Protocol Analyzer. | USB Type-C www.cypress.com/CCG |
|--|--------------------------------------|
|--|--------------------------------------|

3. Accept the license agreement for the software components and click Next (Figure 2-3).

Figure 2-3. License Agreement

4. Figure 2-4 shows the installation progress.

5. Enter Contact Information or select Continue Without Contact Information and click Finish (Figure 2-5).

6. When installation is complete, you have the option to launch **Cypress Update Manager** (Figure 2-6) to ensure you have the latest software package. Click the **Check for updates** button at the bottom of the window. If "No Updates" appears adjacent to the CY4500 EZ-PD[™] Protocol Analyzer, click the **Exit** button. If there are updates, click the **Update** button to download and install the latest analyzer package.

Figure 2-6. Cypress Update Manager

Note: You can launch the Cypress Update Manager at any time from Start > All Programs > Cypress > Cypress Update Manager.

7. After the installation is complete, the contents are available at the following location: <Install Directory>\CY4500 EZ-PD Protocol Analyzer\1.0.

Note: On the Windows 32-bit platform, the default <Install Directory> is C:\Program Files\Cypress; on the Windows 64-bit platform, it is C:\Program Files(x86)\Cypress.

3. CY4500 EZ-PD[™] Protocol Analyzer Hardware

The CY4500 EZ-PD[™] Protocol Analyzer consists of a PSoC 5LP controller that probes into the USB Type-C signals over I²C transpiring between the USB Type-C plug and receptacle, and then transfers them over to a host PC via a USB Micro-B cable. The EZ-PD Analyzer Utility must already be running on the host PC to receive these messages, decode them, and show them as an output. The block diagram for the CY4500 EZ-PD[™] Protocol Analyzer board is shown in Figure 3-1.

The board comprises of a Type-C plug at one end and a Type-C receptacle at the other, which is used to connect to the Type-C device or system under test. The board is powered over the USB micro-B port, which provides 4V, 500mA. The board also consists of one LED to indicate the power status. Besides this, it has connector headers brought out for the GPIOs, CC lines, VBUS, and SBU lines from the USB-PD system. Figure 3-2, Figure 3-3 and Figure 3-4 show the front view, back view and side view of CY4500 EZ-PD[™] Protocol Analyzer board respectively. Table 3-1 contains their detailed description. Headers J1 and J8 are located on the back side of the board. Users need to take precaution and ensure that the exposed header pins of J1 and J8 do not get shorted. Shorting these exposed pins may result in a functional failure or unexpected behavior of the CY4500 EZ-PD[™] Protocol Analyzer.

| J7 | USB Micro-B Connector |
| J8 | Message Trigger Header Pin 1: SOM Pin 2: EOM Pin 3: MTR |

Table 3-1: CY4500 EZ-PD™ Protocol Analyzer Board Interfaces

Note 1: Pins of header J8 are used for the triggering functionality. They can be connected using the jumper cables provided with the kit to an oscilloscope or other hardware that needs to be triggered. See the EZ-PDTM Analyzer Utility User Guide's section 2.3 for more details on how to use this functionality.

Note 2: The EZ-PD[™] Protocol Analyzer Board is protected using a transparent casing. The board should not be removed from the casing any time while using the Analyzer.

4. Analyzer Operation

This chapter describes how to run the CY4500 EZ-PD[™] Protocol Analyzer with the EZ-PD Analyzer Utility and also how to update the firmware of the PSoC 5LP device of the analyzer. You must complete the installation procedure explained in the Analyzer Installation chapter before proceeding.

4.1 Capturing PD Packets Using CY4500 EZ-PD™ Protocol Analyzer

The steps to run the CY4500 EZ-PD[™] Protocol Analyzer in order to capture the Power Delivery Packets on the CC bus are as follows:

- 1. Using a USB Micro-B cable, connect the USB Micro-B receptacle (Connector J7) of the CY4500 EZ-PD[™] Protocol Analyzer board to the host PC. LED1 of the CY4500 EZ-PD[™] Protocol Analyzer board starts blinking in white color.
- Connect the USB Type-C plug (Connector J3) of the CY4500 EZ-PD[™] Protocol Analyzer board to the Type-C host device. In this user guide, the CY4531 EZ-PD[™] CCG3 Evaluation Kit (EVK) (not provided with this analyzer) is used as a Type-C host device as an example.
- 3. Verify that your setup looks similar to the image shown in Figure 4-1.

Figure 4-1: Setup for Operating CY4500 EZ-PD™ Protocol Analyzer

4. On the host PC, launch the EZ-PD Analyzer Utility from **Start** > **All Programs** > **Cypress EZ-PD Analyzer Utility**. The EZ-PD Analyzer Utility's start-up page will look similar to the image shown in Figure 4-2.

Figure 4-2: EZ-PD Analyzer Utility Start-up Page

| EZ-PD™ Analyzer Utility | | | | | |

- 5. Click on the **Start Capturing** icon ►. The icon changes to the **Stop Capturing** icon ■. Alternatively, you can start capturing data by clicking on **Actions > Start Capturing** from the menu bar. The status bar at the bottom of the utility window shows the message "EZ-PD Analyzer is running" (similar to the status bar at the bottom of Figure 4-4).
- Connect a USB Type-C power adapter (not provided with the analyzer) to the USB Type-C receptacle (Connector J2) of the CY4500 EZ-PD[™] Protocol Analyzer board. Verify that your setup looks similar to the image shown in Figure 4-3. The USB Type-C power adapter mentioned here is just an example. Any USB Type-C device can be used in its place.

Figure 4-3: Completing the Setup for Operating CY4500 EZ-PD™ Protocol Analyzer

7. Upon connecting the USB Type-C power adapter, the utility running on the host PC automatically displays a string of messages on the screen. Make sure that the hardware connections are not loose or do not get disconnected in the middle of a data capturing event. The running EZ-PD Analyzer Utility, along with the messages, will look similar to the image shown in Figure 4-4.

Figure 4-4: EZ-PD Analyzer Utility Showing PD Packets Captured on CC Line

- 8. The EZ-PD Analyzer Utility displays the messages that have been captured (sent and received) between the USB Type-C host device and the USB Type-C client device on the CC line. Click on the icon to stop capturing messages. Alternatively, you can stop capturing data by clicking on Actions > Stop Capturing from the menu bar. Upon clicking this icon, the status bar at the bottom of the utility window displays EZ-PD Analyzer is stopped.
- You can save the captured set of messages by clicking on File > Save. These files can be saved in the .ccgx, .xlsx or .csv formats, but only the file saved in .ccgx format can be opened using the EZ-PD Analyzer Utility by clicking File > Open.
- 10. To clear a captured group of messages, you can either click the Clear Data sicon or click on Actions > Clear Data from the menu bar. This clears all the captured group of messages. If they are not saved prior to clicking the Clear Data icon, then these messages are lost.
- 11. If the hardware shown in Figure 4-3 is not stable or gets disconnected at any point, the status bar at the bottom of the utility window shows the message **EZ-PD Analyzer is disconnected.**
- 12. For more information on how to use the EZ-PD Analyzer Utility, refer to the EZ-PD[™] Analyzer Utility User Manual by clicking **Help > User Manual**.

4.2 Updating PSoC 5LP Device Firmware on the CY4500 EZ-PD[™] Protocol Analyzer

The firmware of the PSoC 5LP device present on the CY4500 EZ-PD[™] Protocol Analyzer board can be updated using the EZ-PD Analyzer Utility.

4.2.1 Updating Firmware Using EZ-PD Analyzer Utility

- 1. Using a USB Micro-B cable, connect the USB Micro-B receptacle (Connector J7) of the CY4500 EZ-PD[™] Protocol Analyzer board to the host PC. LED1 of the CY4500 EZ-PD[™] Protocol Analyzer board starts blinking in white color.
- 2. On the host PC, launch the EZ-PD Analyzer Utility from **Start > All Programs > Cypress EZ-PD Analyzer Utility**. The utility's start-up page will look similar to the image shown in Figure 4-2.
- 3. Check the current firmware loaded on the EZ-PD Protocol Analyzer Hardware by selecting Actions > Get Firmware Version as shown in Figure 4-5.

Figure 4-5: Get the current firmware version

4. Wait for the firmware version dialog box to appear as shown in Figure 4-6.

Figure 4-6: Firmware version dialog box

| EZ-PD™ An | alyzer Utility |
|-----------|-----------------------------|
| 1 | Firmware version : 1.0.0.31 |
| | ОК |

Click **OK** to return to the main menu. Proceed with rest of the procedure to download the firmware incase a newer version of the firmware is available.

- 5. Click on Actions > Download Firmware to initiate the firmware update. If the analyzer hardware is not connected, the status bar at the bottom of the utility window shows the message EZ-PD Analyzer is not connected. Ensure that the board connections are secure. If the utility window has any unsaved messages, a new window will pop up with a message "Data is about to clear from the window. Do you want to save?". Users can select Yes or No based on their requirement.
- 6. Upon executing step 5, a new window, **Download firmware,** opens as shown in Figure 4-7. The device enters the bootloader mode by default.

| Load File Program Exit | |

Figure 4-7: "Download Firmware" Window

Click Load File... as shown in Figure 4-7 and select the CY4500 firmware file in .cyacd format as shown in Figure 4-8. Click Open. The binary file provided with the analyzer is available at the following location: <Install Directory>\CY4500 EZ-PD Protocol Analyzer\1.0\Firmware.

Note: On a Windows 32-bit platform, the default <Install Directory> is C:\Program Files\Cypress; on the Windows 64-bit platform, it is C:\Program Files(x86)\Cypress.

| Firmware downloaded successfully. Download ended at 8/12/2016 9:53:02 PM Bootloader HID Device(0x4b4, 0xb71d) is disconnected. | ^ |
| Load File Program | Exit |

10. The steps to update the firmware are now complete. The CY4500 EZ-PD[™] Protocol Analyzer hardware restarts with the firmware used in step 7 and is ready to use.

5. Appendix A: Terminology

This guide assumes that the user of the CY4500 EZ-PD Protocol Analyzer is familiar with the fundamentals of Type-C connectivity and the USB Power Delivery protocol. A brief description of Type-C terms is provided here for reference.

- Alternate Modes: A feature of a USB Type-C system whereby one or both of the SuperSpeed lanes may be repurposed for use with a different serial protocol, such as a DisplayPort, eSATA, or Thunderbolt.
- Client Device: A USB peripheral such as a hub, docking station, or monitor.
- Configuration channel (CC): A USB Type-C bus wire used to transmit protocol signals. This is a half-duplex 300-kHz signal.
- Consumer: A Type-C port that sinks power from VBUS.
- DisplayPort: A digital display interface standard developed by the Video Electronics Standards Association. It is used primarily to connect a video source to a display such as a computer monitor.
- Downstream facing port (DFP): A USB Type-C port on a host or a hub to which devices are connected.
- Dp, Dn: USB Type-C bus wires used to transmit and receive USB 2.0 data.
- Dual-role port (DRP): A USB Type-C port that can operate as either a DFP or a UFP.
- Electronically Marked Cable Assembly (EMCA): A USB cable that includes an IC that reports cable characteristics (such as current rating) to the Type-C ports.

Figure 5-1. Type-C Plug & Receptacle pins

USB3.0 Type-C Plug

- Host Device: A USB Host system such as a PC, notebook, laptop, and so on.
- Provider: A Type-C port that sources power over VBUS.
- Sideband use (SBU): A USB Type-C bus wire used for non-USB control signals, such as DisplayPort control signals.
- Type-C Transceiver: A transmitter/receiver that communicates over the CC.
- TX1p, TX1n, RX1p, RX1n, TX2p, TX2n, RX2p, and RX2n: USB Type-C bus wires used to transmit and receive SuperSpeed USB and PCIe or DisplayPort data.
- Upstream facing port (UFP): A USB Type-C port on a device or a hub that connects to a host or the DFP of a hub.
- USB Power Delivery (USB PD, PD): A new USB standard that increases maximum power delivery over USB from 7.5 W to 100 W.
- USB Type-C (Type-C): A new standard with a slimmer USB connector and a reversible cable, capable of sourcing up to 100 W of power and supporting Alternate Modes.
- VBUS: A USB Type-C bus wire used for power; initially 5 V, but increased up to 20 V on USB PD systems.
- VCONN: A USB Type-C bus wire used to power the IC in the EMCA.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;

- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);

- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;

- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком):

- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
