

FEATURES

- Demonstrates a complete 2 channel digitally-controlled microphone preamplifier system based on THAT5263 IC
- Controls gain of two microphone preamplifiers
- Balanced main audio input/output on XLR connectors
- Balanced TRS line input with -20dB pad
- Switchable phantom power (with external +48V)
- Supports pro audio signal levels: +26 dBu (input and output, $\pm 15V$ supplies)
- Gain adjustable in 3 dB steps from 0 dB to 51 dB
- Easy to use PC Graphical User Interface software
- Generous prototyping area

DESCRIPTION

The THAT 5263-DEMO Digitally-Controlled Mic Preamp Demo Board allows developers to evaluate the THAT5263 digital gain controller IC with THAT differential output microphone preamplifiers. A fully-featured microphone preamplifier is demonstrated

with phantom power switching and fault protection, mic/line inputs, RFI filtering, and output conditioning. The board is controlled by a user-friendly PC graphical user interface over USB.

Figure 1. THAT5263 Simplified Application Circuit

Overview

The THAT5263 is a digital gain controller for low-noise, analog, differential, current-feedback audio preamplifiers. When used in conjunction with an appropriate analog gain block (e.g. THAT 1580 or 1583), the 5263 can digitally control gain from 0dB to 51dB in 3dB steps, while preserving low noise and distortion. It operates from $\pm 5\text{V}$ to $\pm 17\text{V}$ supplies, supporting input signal levels as high as +27 dBu (at 0dB gain, $\pm 17\text{ V}$) without an input pad.

The THAT5263-DEMO Board demonstrates the 5263 mated with the 1580 and 1583 mic preamplifier ICs in a typical circuit. An easy to use USB Graphical User Interface provides total control over all 5263 features. Developers can take advantage of the generous prototyping area to customize the circuit for their own application.

Connections

Power

The USB interface runs on USB bus power, but the rest of the demo board requires an external power supply. +/-15 V (maximum +/-17V) supplies the analog circuitry. +48V phantom power is input (not generated on the board) and switched on and off via the on-board Phantom Power switch. Note that the ground return for +48V phantom power is via the PPGND and connects to the Analog ground via a zero ohm resistor. connector. The +5V input is regulated on board to 3.3V and supplies the digital logic.

Audio Input

The Neutrik combo connector accepts an XLR or 1/4" TRS cable. The 1/4" TRS signal path includes a 20dB pad in order to support line levels.

Audio Output

The Output XLR connector provides access to the balance audio output signal. Please note that the differential attenuator/ output buffers (U3/U5) add a small amount of noise and distortion to the signal and it is therefore recommended that test points TP10 - TP11 be used to measure performance of the mic preamp circuit in isolation.

USB

A PC must be plugged into the demo board via USB in order to control parameters in the 5263. Take care not to hot plug the demo board while the GUI software is running as this will sometimes crash the Windows drivers.

General Purpose Outputs (GPOA, GPOB) and Busy Signal Outputs (BSYA, BSYB)

Each channel of the 5263 provides a GPO in addition to a digital busy signal (BSY). These pins are connected to header P12 via small series resistors. The GPOs are also connected to LEDs D10 and D11. The LEDs can be enabled/disabled by the on-board DIP switches SW2-1 and SW2-2. When enabled, these LEDs can be controlled with the GPO check box on the GUI.

Connecting Multiple Demo Boards in Daisy Chain Mode

Headers P9 and P10 provide easy access to the SPI signals for linking multiple pairs of 5263 channels. Please refer to the 5263 Data Sheet for complete details. Note that the on-board DIP switches SW2-3 and SW2-4 control the Daisy Chain function. These switches must be set to the OFF position (toward the left side of the board) in order to insure proper operation in the normal two channel mode.

Software Set-up and Operation

Download the latest 5362 Demo Board GUI software from the THAT Corporation web site

In the .zip file you will find the GUI executable along with other associated demo board documentation. Simply un-zip the file and place the MicPre_v1_3.exe in some convenient location on your PC.

Once the hardware has been set up as described above, double click the MicPre.exe icon and the GUI should appear:

Figure 2. 5263-DEMO GUI

Next connect the GUI to the demo board by clicking on the Port pull down menu at the top and selecting Reconnect.

The small green LED on the USB module should blink, indicating that communications have been established. Try the GPO check boxes on the GUI and the red LEDs on the demo board should light up,

indicating that the GUI is successfully talking to the 5263.

If the GUI fails to recognize the demo board (most likely caused by a missing USB connection) you will see the following error message:

Figure 3. 5263-DEMO software error message.

If this message appears, you can click OK and the GUI will open, but there will be no connection to the demo board. Once the source of the problem has been resolved (i.e. Turn on the power or connect the missing USB cable), use the Port=>Reconnect pull down to establish communications.

The Port=>Reconnect pull down can be used any-time to reestablish the USB link between the GUI and demo board.

Select "Update immediately" or "Update on zero crossings" from the Gain Mode and GPO Mode drop down menus.

Move the gain slider to adjust gain of the 5263. Gains are continuously adjusted as you move the slider. You may also adjust the gain slider by first giving it scope (clicking it with the mouse) and then pressing the UP and DOWN arrow keys on your computer keyboard, or by clicking the up or down arrow buttons next to the numeric gain text box below the gain slider.

Jumper Options

T-Bias Jumpers, P4, P8

The input circuit provides jumpers (P4, P8) which enable/disable the "T-Bias" function. With the shunts installed, T-Bias is disabled and the circuit provides a 2kΩ differential input impedance to the XLR input. With the shunts removed, T-Bias is enabled and provides a high common mode impedance (ideal for both mic and line inputs) but maintains a modest differential impedance.

FCC Warning

This device is only intended for laboratory test environments. It may radiate radio frequency energy and has not been tested for compliance with subpart J of part 15

of the FCC regulations. Operation of this device in other environments may cause interference with radio communications.

Revision History

Revision	ECO	Date	Changes	Page
00	—	10/28/15	Initial Release	—

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
