

DATA SHEET

SKY12211-478LF: 0.05 to 2.70 GHz 40 W High Power Silicon PIN Diode SPDT Switch

Applications

- Transmit/receive switching and RF path switching in TD-SCDMA, WiMAX, and LTE base stations
- Transmit/receive and RF path switching in land mobile radios, public safety radio, cable TV, and military communication systems

Features

- High power handling: 40 W CW
- Low insertion loss: 0.3 dB typical
- Controlled with positive power supply
- High isolation: 47 dB @ 1.2 GHz
- Fast RF rise time: 32 ns typical
- Bias driver circuit available on request
- Small, QFN (16-pin, 4 x 4 mm) Pb-free package (MSL1, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Figure 1. SKY12211-478LF Block Diagram

Description

The SKY12211-478LF is a high power handling, Single-Pole, Double-Throw (SPDT) silicon PIN diode switch with symmetrical switching paths from a single common port. The device operates over the 0.05 GHz to 2.70 GHz band. It features low insertion loss, excellent power handling, and superb linearity with low DC power consumption.

The SKY12211-478LF is well-suited for use as a high power transmit/receive and RF path switch in a variety of telecommunication systems such as WiMAX, TD-SCDMA, or LTE base stations.

The device is provided in a 4 x 4 mm, 16-pin Quad Flat No-Lead (QFN) package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY12211-478LF are provided in Table 2. Recommended operating conditions are specified in Table 3 and electrical specifications are provided in Table 4.

Typical performance characteristics of the SKY12211-478LF are illustrated in Figures 3 through 10.

The state of the SKY12211-478LF is determined by the logic provided in Table 6. Table 7 provides the logic for use with the SKY12211-478LF Evaluation Board.

Power derating data is plotted against temperature in Figures 11 and 12. Equivalent circuit diagrams for transmit and receive are shown in Figure 13.

Table 2. SKY12211-478LF Absolute Maximum Ratings

Parameter	Symbol	Minimum	Maximum	Units
RF CW input power ($T_{\text{SUBSTRATE}} = 25\text{ }^{\circ}\text{C}$)	P_{IN}		60	W
RF peak input power ($T_{\text{SUBSTRATE}} = 25\text{ }^{\circ}\text{C}$, RF burst width = 10 μs , RF burst repetition rate = 25 kHz)	P_{IN}		240	W
Control port reverse voltage	V_{CTL}		200	V
Control port forward current	I_{CTL}		200	mA
Operating temperature	T_{OP}	-55	+175	$^{\circ}\text{C}$
Storage temperature	T_{STG}	-55	+200	$^{\circ}\text{C}$
Electrostatic discharge:	ESD			
Charged Device Model (CDM), Class 4			1000	V
Human Body Model (HBM), Class 1A			250	V
Machine Model (MM), Class A			100	V

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Table 3. Recommended Operating Conditions

Parameter	Symbol	Min	Typical	Max	Units
Control port reverse voltage	V_{CTL}	5	28	100	V
Control port forward current (Note 1)	I_{CTL}	20	50	100	mA

Evaluation Board Description

The SKY12211-478LF Evaluation Board is used to test the performance of the SKY12211-478LF PIN Diode SPDT switch. An assembly drawing for the Evaluation Board is shown in Figure 14. The layer detail is provided in Figure 15.

The SKY12211-478LF is designed to handle very large signals. Sufficient power may be dissipated by this switch to cause heating of the PIN diodes contained in the switch. It is very important to use a printed circuit board design that provides adequate cooling capability to keep the junction temperature of the PIN diodes below their maximum rated operating temperature.

As indicated in Figure 11, the x-axis temperature is referenced to the bottom of the QFN package. A printed circuit board with a very low thermal resistance and external heat sink design must be used to achieve the results shown in this Figure. The power derating curve with the x-axis temperature referenced to the bottom of the printed circuit board is provided in Figure 12.

The evaluation circuit is designed to facilitate control of the SKY12211-478LF SPDT switch with bias signals derived from positive voltages. The state of the PIN diodes within the

S2675

Figure 13. SKY12211-478LF Equivalent Circuit Diagrams

SKY12211-478LF is controlled with 5 V applied to the RFC port and bias voltages of either 28 V or 0 V applied to the remaining bias inputs (RF1 and RF2 ports). The switch state circuit diagrams are shown in Figure 13.

The values of resistors R2 and R3 (refer to the schematic diagram in Figure 16), which are both nominally 540 Ω , together with the magnitudes of the voltages applied to the RF1 and RF2 ports, determine which of the two series of diodes is biased into conduction and how much current flows through the forward biased diode.

For example, to place the SKY12211-478LF into the RFC to RF1 low insertion loss state, 0 V is applied to the RF1 port (which forward biases the diode between pins 2 and 14), 28 V is applied to the RF2 port (which reverse biases the diode between pins 2 and 7), 0 V is applied to the RF2_BIAS port (which applies a forward bias through R3 to the diode connected between pins 7 and 9), and 28 V is applied to the RF1_BIAS port (which applies a forward bias through R2 to the diode connected between pins 14 and 11).

The values of R2 and R3 may be adjusted to accommodate other bias voltages. Resistance values of 540 Ω are selected to

produce approximately 50 mA of forward bias current in the diodes, which are forced into conduction when the bias source voltage is 28 V.

The component values shown in the Evaluation Board circuit diagram (Figure 16) were selected to optimize performance in the 0.05 to 2.70 GHz band.

Refer to Table 8 for the Evaluation Board Bill of Materials. Table 9 provides voltage, current, and resistor values for bias adjustments.

Package Dimensions

The PCB layout footprint for the SKY12211-478LF is shown in Figure 17. Typical case markings are noted in Figure 18. Package dimensions for the 16-pin QFN are shown in Figure 19, and tape and reel dimensions are provided in Figure 20.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY12211-478LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

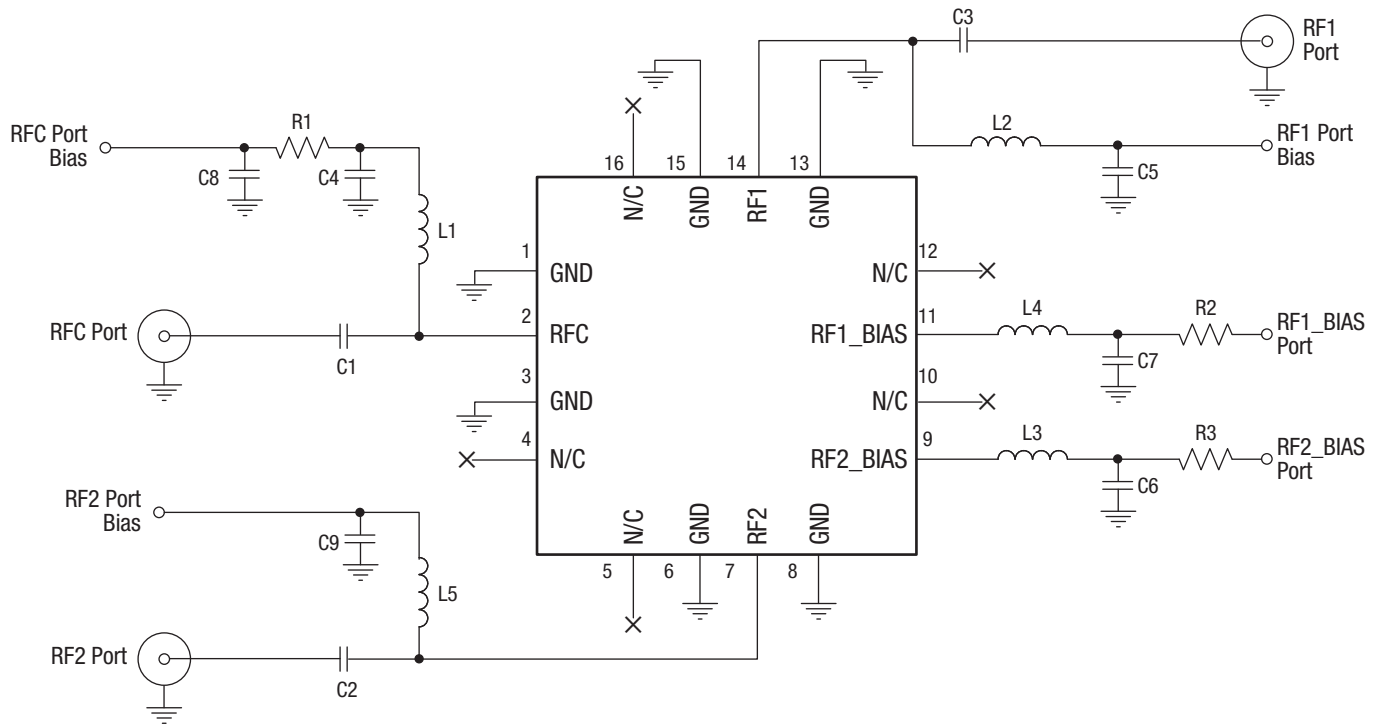

Figure 15. Layer Detail Physical Characteristics

NOTE: The N/C pins (4, 5, 10, 12, and 16) are not internally connected, so they can be left open or grounded.

S2676

Figure 16. Evaluation Board Schematic

Table 8. Evaluation Board Bill of Materials (Note 1)

Component	Value	Size	Manufacturer	Manufacturer Part Number	Characteristics
C1, C2, C3, C4, C5, C6, C7, C9	1000 pF	0603	TDK	C1608C0G1H102JT	COG, 50 V, $\pm 5\%$
C8	1 μ F	0603	TDK	C2012X7R1H104K	X7R, 50 V, $\pm 10\%$
L1, L2, L3, L4, L5	820 nH	0603	Coil Craft	0603LS-821XJLB	SRF, 410 MHz, $\pm 5\%$
R1 (Note 2)	80 Ω	0603	Panasonic	ERJ-3GEYJ161V	0.1 W, $\pm 5\%$
R2, R3 (Note 3)	540 Ω	—	—	—	Axial leaded (off board)

Note 1: Component values selected are based on the desired frequency and bias level. Values may be adjusted for a specific response.

Note 2: Two 160 Ω resistors are combined in parallel to achieve a minimum power handling requirement and 80 Ω resistance.

Note 3: Evaluation Board does not include resistors R2 and R3. Operating at 28 V and 50 mA requires R2 and R3 resistors with a power dissipation greater than 1.35 W.

Table 9. Component Calculation Values

Vs (V)	V _{DIODE} (V)	V _{RES} (V)	Current (A)	Resistance (Ω)	Power Dissipation (W)
28	1	27	0.05	540	1.35
28	1	27	0.02	1350	0.54
5	1	4	0.05	80	0.20
5	1	4	0.02	200	0.08

Notes: Vs = supply voltage; V_{DIODE} = voltage drop across the diode; V_{RES} = voltage drop across the resistor.

R2 and R3 values are calculated by $(V_s - V_{DIODE})/I$, where I is the desired bias current.

The power dissipation in R2 and R3 is calculated by $I \times (V_s - V_{DIODE})$. The resistor selected must be safely rated with a power greater than the dissipated power.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
