

MICROCHIP MCP102/103/121/131

Micropower Voltage Supervisors

Features

- Ultra low supply current: 1.75 μ A (steady-state max.)
- Precision monitoring options of:
 - 1.90V, 2.32V, 2.63V, 2.93V, 3.08V, 4.38V and 4.63V
- Resets microcontroller in a power-loss event
- $\overline{\text{RST}}$ pin (Active-low):
 - **MCP121**: Active-low, open-drain
 - **MCP131**: Active-low, open-drain with internal pull-up resistor
 - **MCP102** and **MCP103**: Active-low, push-pull
- Reset Delay Timer (120 ms delay, typ.)
- Available in SOT23-3, TO-92 and SC-70 packages
- Temperature Range:
 - Extended: -40°C to +125°C (except MCP1XX-195)
 - Industrial: -40°C to +85°C (**MCP1XX-195 only**)
- Pb-free devices

Applications

- Critical Microcontroller and Microprocessor Power-monitoring Applications
- Computers
- Intelligent Instruments
- Portable Battery-powered Equipment

General Description

The MCP102/103/121/131 are voltage supervisor devices designed to keep a microcontroller in reset until the system voltage has reached and stabilized at the proper level for reliable system operation. Table 1 shows the available features for these devices.

TABLE 1: DEVICE FEATURES

Device	Output		Reset Delay (typ)	Package Pinout (Pin # 1, 2, 3)	Comment
	Type	Pull-up Resistor			
MCP102	Push-pull	No	120 ms	$\overline{\text{RST}}$, V_{DD} , V_{SS}	
MCP103	Push-pull	No	120 ms	V_{SS} , $\overline{\text{RST}}$, V_{DD}	
MCP121	Open-drain	External	120 ms	$\overline{\text{RST}}$, V_{DD} , V_{SS}	
MCP131	Open-drain	Internal (~95 k Ω)	120 ms	$\overline{\text{RST}}$, V_{DD} , V_{SS}	
MCP111	Open-drain	External	No	V_{OUT} , V_{SS} , V_{DD}	See MCP111/112 Data Sheet (DS21889)
MCP112	Push-Pull	No	No	V_{OUT} , V_{SS} , V_{DD}	See MCP111/112 Data Sheet (DS21889)

Package Types

Block Diagram

MCP102/103/121/131

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings†

V_{DD}	7.0V
Input current (V_{DD})	10 mA
Output current ($\overline{RST}$)	10 mA
Rated Rise Time of V_{DD}	100V/ μ s
All inputs and outputs (except $\overline{RST}$) w.r.t. V_{SS}	-0.6V to ($V_{DD} + 1.0$ V)
$\overline{RST}$ output w.r.t. V_{SS}	-0.6V to 13.5V
Storage temperature	-65°C to +150°C
Ambient temp. with power applied	-40°C to +125°C
Maximum Junction temp. with power applied	150°C
ESD protection on all pins	≥ 2 kV

† **Notice:** Stresses above those listed under “Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

DC CHARACTERISTICS

Electrical Specifications: Unless otherwise indicated, all limits are specified for: $V_{DD} = 1$ V to 5.5V, $R_{PU} = 100$ k Ω (**MCP121** only), $T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$.

Parameters		Sym	Min	Typ	Max	Units	Conditions
Operating Voltage Range		V_{DD}	1.0	—	5.5	V	
Specified V_{DD} Value to $\overline{RST}$ low		V_{DD}	1.0	—		V	$I_{\overline{RST}} = 10$ μ A, $V_{\overline{RST}} < 0.2$ V
Operating Current	MCP102, MCP103, MCP121	I_{DD}	—	< 1	1.75	μ A	Reset Power-up Timer (t_{RPU}) Inactive
			—	—	20.0	μ A	Reset Power-up Timer (t_{RPU}) Active
	MCP131	I_{DD}	—	< 1	1.75	μ A	$V_{DD} > V_{TRIP}$ and Reset Power-up Timer (t_{RPU}) Inactive
			—	—	75	μ A	$V_{DD} < V_{TRIP}$ and Reset Power-up Timer (t_{RPU}) Inactive (Note 3)
			—	—	90	μ A	Reset Power-up Timer (t_{RPU}) Active (Note 4)
			—	—			

- Note 1:** Trip point is $\pm 1.5\%$ from typical value.
Note 2: Trip point is $\pm 2.5\%$ from typical value.
Note 3: $\overline{RST}$ output is forced low. There is a current through the internal pull-up resistor.
Note 4: This includes the current through the internal pull-up resistor and the reset power-up timer.
Note 5: This specification allows this device to be used in PIC[®] microcontroller applications that require In-Circuit Serial Programming[™] (ICSP[™]) (see device-specific programming specifications for voltage requirements). This specification DOES NOT allow a continuous high voltage to be present on the open-drain output pin (V_{OUT}). The total time that the V_{OUT} pin can be above the maximum device operational voltage (5.5V) is 100s. Current into the V_{OUT} pin should be limited to 2 mA and it is recommended that the device operational temperature be maintained between 0°C to 70°C ($+25^\circ\text{C}$ preferred). For additional information, please refer to Figure 2-33.
Note 6: This parameter is established by characterization and not 100% tested.

DC CHARACTERISTICS (CONTINUED)

Electrical Specifications: Unless otherwise indicated, all limits are specified for: $V_{DD} = 1V$ to $5.5V$, $R_{PU} = 100\text{ k}\Omega$ (**MCP121** only), $T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$.

3.0 PIN DESCRIPTION

The descriptions of the pins are listed in Table 3-1.

TABLE 3-1: PIN FUNCTION TABLE

Pin No.		Symbol	Function
MCP102 MCP121 MCP131	MCP103		
1	1	$\overline{\text{RST}}$	Output State V_{DD} Falling: $H = V_{DD} > V_{TRIP}$ $L = V_{DD} < V_{TRIP}$ V_{DD} Rising: $H = V_{DD} > V_{TRIP} + V_{HYS}$ $L = V_{DD} < V_{TRIP} + V_{HYS}$
2	3	V_{DD}	Positive power supply
3	2	V_{SS}	Ground reference

MCP102/103/121/131

4.0 APPLICATION INFORMATION

For many of today's microcontroller applications, care must be taken to prevent low-power conditions that can cause many different system problems. The most common causes are brown-out conditions, where the system supply drops below the operating level momentarily. The second most common cause is when a slowly decaying power supply causes the microcontroller to begin executing instructions without sufficient voltage to sustain volatile memory (RAM), thus producing indeterminate results. Figure 4-1 shows a typical application circuit.

The MCP102/103/121/131 are voltage supervisor devices designed to keep a microcontroller in reset until the system voltage has reached and stabilized at the proper level for reliable system operation. These devices also operate as protection from brown-out conditions.

FIGURE 4-1: Typical Application Circuit.

4.1 $\overline{RST}$ Operation

The $\overline{RST}$ output pin operation determines how the device can be used and indicates when the system should be forced into reset. To accomplish this, an internal voltage reference is used to set the voltage trip point (V_{TRIP}). Additionally, there is a hysteresis on this trip point.

When the falling edge of V_{DD} crosses this voltage threshold, the reset power-down timer (T_{RPD}) starts. When this delay timer times out, the $\overline{RST}$ pin is forced low.

When the rising-edge of V_{DD} crosses this voltage threshold, the reset power-up timer (T_{RPU}) starts. When this delay timer times out, the $\overline{RST}$ pin is forced high, T_{RPU} is active and there is additional system current.

The actual voltage trip point (V_{TRIPAC}) will be between the minimum trip point ($V_{TRIPMIN}$) and the maximum trip point ($V_{TRIPMAX}$). The hysteresis on this trip point and the delay timer (T_{RPU}) are to remove any "jitter" that would occur on the $\overline{RST}$ pin when the device V_{DD} is at the trip point.

Figure 4-2 shows the waveform of the $\overline{RST}$ pin as determined by the V_{DD} voltage, while Table 4-1 shows the state of the $\overline{RST}$ pin. The V_{TRIP} specification is for falling V_{DD} voltages. When the V_{DD} voltage is rising, the $\overline{RST}$ will not be driven high until V_{DD} is at $V_{TRIP} + V_{HYS}$. Once V_{DD} has crossed the voltage trip point, there is also a minimal delay time (T_{RPD}) before the $\overline{RST}$ pin is driven low.

TABLE 4-1: $\overline{RST}$ PIN STATES

Device	State of $\overline{RST}$ Pin when:		Output Driver
	$V_{DD} < V_{TRIP}$	$V_{DD} > V_{TRIP} + V_{HYS}$	
MCP102	L	H	Push-pull
MCP103	L	H	Push-pull
MCP121	L	H (1)	Open-drain (1)
MCP131	L	H (2)	Open-drain (2)

Note 1: Requires External Pull-up resistor

2: Has Internal Pull-up resistor

FIGURE 4-2: $\overline{RST}$ Operation as Determined by the V_{TRIP} and V_{HYS} .

4.2 Negative Going V_{DD} Transients

The minimum pulse width (time) required to cause a reset may be an important criteria in the implementation of a Power-on Reset (POR) circuit. This time is referred to as transient duration, defined as the amount of time needed for these supervisory devices to respond to a drop in V_{DD} . The transient duration time is dependant on the magnitude of $V_{TRIP} - V_{DD}$. Generally speaking, the transient duration decreases with increases in $V_{TRIP} - V_{DD}$.

Figure 4-3 shows a typical transient duration vs. reset comparator overdrive, for which the MCP102/103/121/131 will not generate a reset pulse. It shows that the farther below the trip point the transient pulse goes, the duration of the pulse required to cause a reset gets shorter. Figure 2-32 shows the transient response characteristics for the MCP102/103/121/131.

A 0.1 μF bypass capacitor, mounted as close as possible to the V_{DD} pin, provides additional transient immunity (refer to Figure 4-1).

FIGURE 4-3: Example of Typical Transient Duration Waveform.

4.3 Reset Power-up Timer (t_{RPU})

Figure 4-4 illustrates the device current states. While the system is powering down, the device has a low current. This current is dependent on the device V_{DD} and trip point. When the device V_{DD} rises through the voltage trip point (V_{TRIP}), an internal timer starts. This timer consumes additional current until the $\overline{RST}$ pin is driven (or released) high. This time is known as the Reset Power-up Time (t_{RPU}). Figure 4-4 shows when t_{RPU} is active (device consuming additional current).

FIGURE 4-4: Reset Power-up Timer Waveform.

4.3.1 EFFECT OF TEMPERATURE ON RESET POWER-UP TIMER (T_{RPU})

The Reset Power-up timer time-out period (t_{RPU}) determines how long the device remains in the reset condition. This is affected by both V_{DD} and temperature. Typical responses for different V_{DD} values and temperatures are shown in Figures 2-26, 2-27 and 2-28.

MCP102/103/121/131

4.4 Using in PIC[®] Microcontroller, ICSP[™] Applications (MCP121 only)

Figure 4-5 shows the typical application circuit for using the MCP121 for voltage supervisory function when the PIC microcontroller will be programmed via the ICSP feature. Additional information is available in TB087, "Using Voltage Supervisors with PIC[®] Microcontroller Systems which Implement In-Circuit Serial Programming[™]", DS91087.

Note: It is recommended that the current into the RST pin be current limited by a 1 k Ω resistor.

FIGURE 4-5: Typical Application Circuit for PIC[®] Microcontroller with the ICSP[™] feature.

5.0 PACKAGING INFORMATION

5.1 Package Marking Information

3-Lead TO-92

Example:

3-Pin SOT-23

Example:

Part Number	MCP1xx =			
	MCP102	MCP103	MCP121	MCP131
MCP1xxT-195I/TT	JGNN	TGNN	LGNN	KGNN
MCP1xxT-240ETT	JHNN	THNN	LHNN	KHNN
MCP1xxT-270E/TT	JJNN	TJNN	LJNN	KJNN

NOTES:

APPENDIX A: REVISION HISTORY

Revision C (January 2013)

- Added a note to each package outline drawing.

Revision B (March 2005)

The following is the list of modifications:

1. Added **Section 4.4 “Using in PIC® Microcontroller, ICSP™ Applications (MCP121 only)”** on using the MCP121 in PIC microcontroller ICSP applications.
2. Added V_{ODH} specifications in **Section 1.0 “Electrical Characteristics”** (for ICSP applications).
3. Added Figure 2-33.
4. Updated SC-70 package markings and added Pb-free marking information to **Section 5.0 “Packaging information”**.
5. Added **Appendix A: “Revision History”**.

Revision A (August 2004)

- Original Release of this Document.

MCP102/103/121/131

NOTES:

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

PART NO.		-	X	XXX	X	/	XX
Device	Tape/Reel Option	Monitoring Options	Temperature Range	Package			
Device:		MCP102: MicroPower Voltage Supervisor, push-pull MCP102T: MicroPower Voltage Supervisor, push-pull (Tape and Reel) MCP103: MicroPower Voltage Supervisor, push-pull MCP103T: MicroPower Voltage Supervisor, push-pull (Tape and Reel) MCP121: MicroPower Voltage Supervisor, open-drain MCP121T: MicroPower Voltage Supervisor, open-drain (Tape and Reel) MCP131: MicroPower Voltage Supervisor, open-drain MCP131T: MicroPower Voltage Supervisor, open-drain (Tape and Reel)					
Monitoring Options:		195 = 1.90V 240 = 2.32V 270 = 2.63V 300 = 2.93V 315 = 3.08V 450 = 4.38V 475 = 4.63V					
Temperature Range:		I = -40°C to +85°C (MCP11X-195 only) E = -40°C to +125°C (Except MCP11X-195 only)					
Package:		TT = SOT-23B, 3-lead LB = SC-70, 3-lead TO = TO-92, 3-lead					

Examples:	
a)	MCP102T-195I/TT: Tape and Reel, 1.95V MicroPower Voltage Supervisor, push-pull, -40°C to +85°C, SOT-23B-3 package.
b)	MCP102-300E/TO: 3.00V MicroPower Voltage Supervisor, push-pull, -40°C to +125°C, TO-92-3 package.
a)	MCP103T-270E/TT: Tape and Reel, 2.70V MicroPower Voltage Supervisor, push-pull, -40°C to +125°C, SOT-23B-3 package.
b)	MCP103T-475E/LB: Tape and Reel, 4.75V MicroPower Voltage Supervisor, push-pull, -40°C to +125°C, SC-70-3 package.
a)	MCP121T-315I/LB: Tape and Reel, 3.15V MicroPower Voltage Supervisor, open-drain, -40°C to +125°C, SC-70-3 package.
b)	MCP121-300E/TO: 3.00V MicroPower Voltage Supervisor, open-drain, -40°C to +125°C, TO-92-3 package.
a)	MCP131T-195I/TT: Tape and Reel, 1.95V MicroPower Voltage Supervisor, open-drain, -40°C to +85°C, SOT-23B-3 package.
b)	MCP131-300E/TO: 3.00V MicroPower Voltage Supervisor, open-drain, -40°C to +125°C, TO-92-3 package.

MCP102/103/121/131

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Trademarks

QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
= ISO/TS 16949 =

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
