

CMOS LDO Regulator Series for Portable Equipments

High-speed Load Response FULL CMOS LDO Regulators

BU□□TA2WNVX Series, BU□□TA2WHFV Series

No.09020EAT01

●Description

BU□□TA2WNVX /HFV series is high-performance FULL CMOS regulator with 200-mA output, which is mounted on microminiature package SSON004X1216 (1.2 mm × 1.6 mm × 0.6 mm) & HVSO5 (1.6mm X 1.6mm X 0.6mm). It has excellent noise characteristics and load responsiveness characteristics despite its low circuit current consumption of 40 μA. It is most appropriate for various applications such as power supplies for logic IC, RF, and camera modules. Microminiature package SSON004X1216 & HVSO5 with built-in heatsink is adopted for the package, which contributes to the space-saving design of the set.

●Features

- 1) High-accuracy output voltage of ±1% (±25 mV on 1.5-V & 1.8-V products)
- 2) High ripple rejection: 70 dB (Typ., 1 kHz, VOUT ≤ 1.8 V)
- 3) Compatible with small ceramic capacitor (CIN=Co=1.0 μF)
- 4) Low current consumption: 40 μA
- 5) ON/OFF control of output voltage
- 6) With built-in overcurrent protection circuit and overheat protection circuit
- 7) With built-in output discharge circuit
- 8) Adopting microminiature power package SSON004X1216

●Applications

Battery-powered portable equipment, etc.

● Absolute maximum rating

Parameter	Symbol	Limits	Unit
Maximum applied power voltage	VMAX	-0.3 ~ +6.5	V
Power dissipation	Pd1	220* ¹ (SSON004X1216)	mW
	Pd2	410* ² (HVSO5)	mW
Maximum junction temperature	TjMAX	+125	°C
Operational temperature range	Topr	-40 ~ +85	°C
Storage temperature range	Tstg	-55 ~ +125	°C

*1 When 1 PCB (70 mm × 70 mm, thickness 1.6-mm glass epoxy) a standard ROHM board is implemented.
Reduced to 2.2 mW/°C when used at Ta=25°C or higher.

*2 When 1 PCB (70 mm × 70 mm, thickness 1.6-mm glass epoxy) a standard ROHM board is implemented.
Reduced to 4.1 mW/°C when used at Ta=25°C or higher.

● Recommended operating range (Do not exceed Pd.)

Parameter	Symbol	Limits	Unit
Input power supply voltage	VIN	2.5 ~ 5.5	V
Maximum output current	IMAX	200	mA

● Recommended operating conditions

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Input capacitor	CIN	0.5* ³	1.0	—	μF	A ceramic capacitor is recommended.
Output capacitor	Co	0.5* ³	1.0	—	μF	A ceramic capacitor is recommended.

*3 Set the capacity value of the capacitor so that it does not fall below the minimum value, taking temperature characteristics, DC device characteristics, and change with time into consideration.

● Input/Output terminal equivalent circuit schematic

Fig. 2 Input/Output equivalent circuit

● About input/output capacitor

It is recommended to place a capacitor as close as possible to the pins between the input terminal and GND or between the output terminal and GND.

The capacitor between the input terminal and GND becomes valid when source impedance increases or when wiring is long. The larger the capacity of the output capacitor between the output terminal and GND is, the better the stability and characteristics in output load fluctuation become. However, please check the status of actual implementation. Ceramic capacitors generally have variation, temperature characteristics, and direct current bias characteristics and the capacity value also decreases with time depending on the usage conditions. It is recommended to select a ceramic capacitor upon inquiring about detailed data of the related manufacturer.

● About the equivalent series resistance (ESR) of a ceramic capacitor

Capacitors generally have ESR (equivalent series resistance) and it operates stably in the ESR-IOUT area shown on the right. Since ceramic capacitors, tantalum capacitors, electrolytic capacitors, etc. generally have different ESR, please check the ESR of the capacitor to be used and use it within the stability area range shown in the right graph for evaluation of the actual application.

● About power dissipation (Pd)

As for power dissipation, an approximate estimate of the heat reduction characteristics and internal power consumption of IC are shown, so please use these for reference. Since power dissipation changes substantially depending on the implementation conditions (board size, board thickness, metal wiring rate, number of layers and through holes, etc.), it is recommended to measure Pd on a set board. Exceeding the power dissipation of IC may lead to deterioration of the original IC performance, such as causing operation of the thermal shutdown circuit or reduction in current capability. Therefore, be sure to prepare sufficient margin within power dissipation for usage.

Calculation of the maximum internal power consumption of IC (P_{MAX})

$$P_{MAX} = (V_{IN} - V_{OUT}) \times I_{OUT(MAX)}$$

(V_{IN}: Input voltage V_{OUT}: Output voltage I_{OUT(MAX)}: Maximum output current)

○ SSON004X1216

Measurement conditions

	Evaluation Board 1 (Single-side Board)	Evaluation Board 2 (Double-side Board)
Layout of Board for Measurement (Unit: mm)		
		
Measurement State	With board implemented (Wind speed 0 m/s)	With board implemented (Wind speed 0 m/s)
Board Material	Glass epoxy resin (Single-side board)	Glass epoxy resin (Double-side board)
Board Size	40 mm x 40 mm x 0.8 mm	40 mm x 40 mm x 0.8 mm
Wiring Rate	Top layer	Metal (GND) wiring rate: Approx. 25%
	Bottom layer	Metal (GND) wiring rate: Approx 0%
Through Hole	0 holes	Diameter 0.5 mm × 12 holes
Power Dissipation	1100 mW	1250 mW
Thermal Resistance	θ _{ja} =91°C/W	θ _{ja} =80°C/W

* Please design the margin so that P_{MAX} becomes is than Pd (P_{MAX}<Pd) within the usage temperature range.

○ HVSOF5

- Other notes

- About absolute maximum rating

Breakage may occur when absolute maximum ratings such as applied voltage and operating temperature range are exceeded. Short mode or open mode cannot be specified at occurrence of a break, so please prepare physical safety measures (e.g., fuse) if such special mode in which the absolute maximum rating is exceeded can be assumed.

- About GND potential

Please be sure that the potential of the GND terminal is the lowest in any operating condition.

- About thermal design

Please provide thermal design with sufficient margin, taking power dissipation (Pd) in actual usage conditions into consideration.

- About short between pins and misattachment

Please be careful regarding the IC direction and misalignment at attachment onto a printed circuit board. Misattachment may cause a break of IC. Short caused by foreign matter between outputs, output and power supply, or GNDs may also lead to a break.

- About operation in a strong electromagnetic field

Please note that usage in a strong electromagnetic field may cause malfunction.

- About common impedance

Please give due consideration to wiring of the power source and GND by reducing common-mode ripple or making ripple as small as possible (e.g., making the wiring as thick and short as possible, or reducing ripple by L-C), etc.

- About STBY terminal voltage

Set STBY terminal voltage to 0.3 V or less to put each channel into a standby state and to 1.5 V or more to put each channel into an operating state. Do not fix STBY terminal voltage to 0.3 V or more and 1.5 V or less or do not lengthen the transition time. This may cause malfunction or failure.

When shorting the VIN terminal and STBY terminal for usage, the status will be "STBY=VIN=LOW" at turning the power OFF, and discharge of the VOUT terminal cannot operate, which means voltage may remain for a certain time in the VOUT terminal. Since turning the power ON again in this state may cause overshoot, turn the power ON for use after the VOUT terminal is completely discharged.

- About overcurrent protection circuit

Output has a built-in overcurrent protection circuit, which prevents IC break at load short. Note that this protection circuit is effective for prevention of breaks due to unexpected accidents. Please avoid usage by which the protection circuit operates continuously.

- About thermal shutdown

Output is OFF when the thermal circuit operates since a temperature protection circuit is built in to prevent thermal breakdown. However, it recovers when the temperature returns to a certain temperature. The thermal circuit operates at emergency such as overheating of IC. Since it is prepared to prevent IC breakdown, please do not use it in a state in which protection works.

- About reverse current

For applications on which reverse current is assumed to flow into IC, it is recommended to prepare a path to let the current out by putting a bypass diode between the VIN-VOUT terminals.

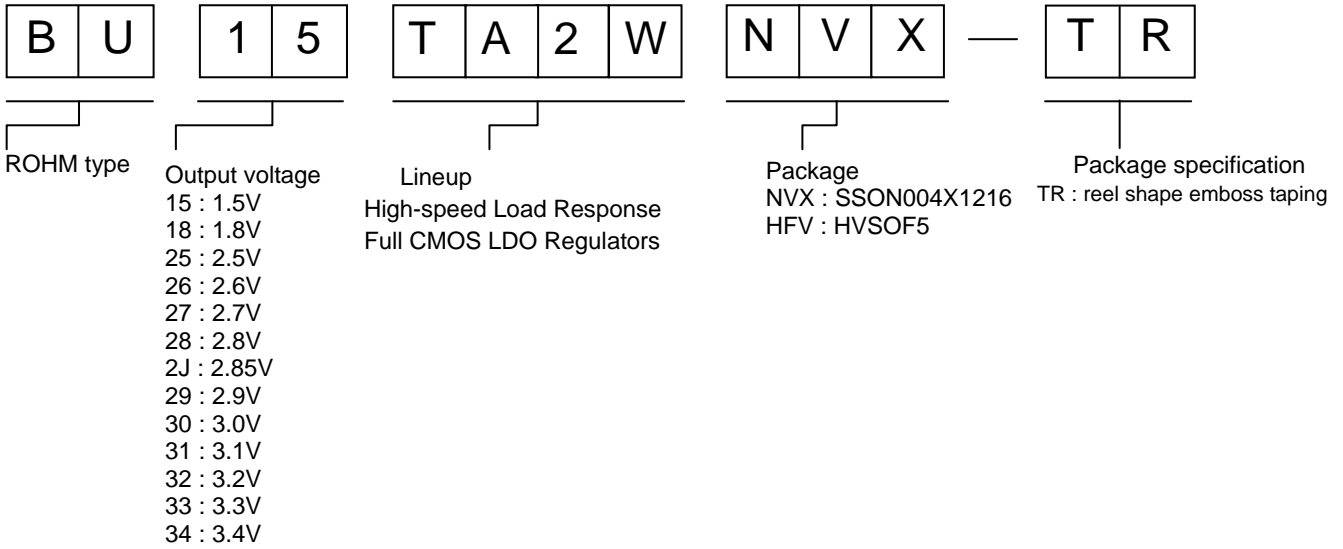

Fig.181 Example of bypass diode connection

- About testing on a set board

When connecting a capacitor to a terminal with low impedance for testing on a set board, please be sure to discharge for each process since IC may be stressed. As a countermeasure against static electricity, prepare grounding in the assembly process and take sufficient care in transportation and storage. In addition, when connecting a capacitor to a jig in a testing process, please do so after turning the power OFF and remove it after turning the power OFF.

● Selection of order type

SSON004X1216

<Tape and Reel information>

Tape	Embossed carrier tape
Quantity	5000pcs
Direction of feed	TR (The direction is the 1pin of product is at the upper right when you hold reel on the left hand and you pull out the tape on the right hand)

* Order quantity needs to be multiple of the minimum quantity.

Notes

No copying or reproduction of this document, in part or in whole, is permitted without the consent of ROHM Co.,Ltd.

The content specified herein is subject to change for improvement without notice.

The content specified herein is for the purpose of introducing ROHM's products (hereinafter "Products"). If you wish to use any such Product, please be sure to refer to the specifications, which can be obtained from ROHM upon request.

Examples of application circuits, circuit constants and any other information contained herein illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.

Great care was taken in ensuring the accuracy of the information specified in this document. However, should you incur any damage arising from any inaccuracy or misprint of such information, ROHM shall bear no responsibility for such damage.

The technical information specified herein is intended only to show the typical functions of and examples of application circuits for the Products. ROHM does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by ROHM and other parties. ROHM shall bear no responsibility whatsoever for any dispute arising from the use of such technical information.

The Products specified in this document are intended to be used with general-use electronic equipment or devices (such as audio visual equipment, office-automation equipment, communication devices, electronic appliances and amusement devices).

The Products specified in this document are not designed to be radiation tolerant.

While ROHM always makes efforts to enhance the quality and reliability of its Products, a Product may fail or malfunction for a variety of reasons.

Please be sure to implement in your equipment using the Products safety measures to guard against the possibility of physical injury, fire or any other damage caused in the event of the failure of any Product, such as derating, redundancy, fire control and fail-safe designs. ROHM shall bear no responsibility whatsoever for your use of any Product outside of the prescribed scope or not in accordance with the instruction manual.

The Products are not designed or manufactured to be used with any equipment, device or system which requires an extremely high level of reliability the failure or malfunction of which may result in a direct threat to human life or create a risk of human injury (such as a medical instrument, transportation equipment, aerospace machinery, nuclear-reactor controller, fuel-controller or other safety device). ROHM shall bear no responsibility in any way for use of any of the Products for the above special purposes. If a Product is intended to be used for any such special purpose, please contact a ROHM sales representative before purchasing.
