DESCRIPTION

The LT[®]1034 is a micropower, precision 1.2V/2.5V reference combined with a 7V auxiliary reference. The 1.2V/2.5V reference is a trimmed, thin-film, band-gap, voltage reference with 1% initial tolerance and guaranteed 20ppm/°C temperature drift. Operating on only 20 μ A, the LT1034 offers guaranteed drift, low temperature cycling hysteresis and good long-term stability. The low dynamic impedance makes the LT1034 easy to use from unregulated supplies. The 7V reference is a subsurface zener device for less demanding applications.

The LT1034 reference can be used as a high performance upgrade of the LM385 or LT1004, where guaranteed temperature drift is desired.

Note 1: Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

Note 2: Forward biasing either diode will affect the operation of the other diode.

Note 3: This parameter guaranteed by “reverse breakdown change with current” test.

Note 4: For the LT1034-1.2: $20\mu\text{A} \leq I_R \leq 2\text{mA}$. For the LT1034-2.5: $30\mu\text{A} \leq I_R \leq 2\text{mA}$.
