

MAX17115 Evaluation Kit

General Description

The MAX17115 evaluation kit (EV kit) is a fully assembled and tested surface-mount PCB that provides the voltages and features required for thin-film transistor (TFT), liquid-crystal display (LCD) applications. The EV kit contains a high-performance step-up regulator, a high-accuracy, high-voltage low-dropout (LDO) linear regulator, a positive single-stage charge pump, a negative single-stage charge pump with a shunt voltage regulator, and a high-performance buffer amplifier.

Features

- ◆ **+4.5V to +5.5V Input Range**
- ◆ **Output Voltages**
 - +16V at 500mA (Step-Up Switching Regulator)**
 - +15V at 20mA (High-Voltage LDO Linear Regulator)**
 - +30V at 20mA (Positive Charge Pump)**
 - 6.8V at 20mA (Negative Charge Pump with a Shunt Voltage Regulator, D5)**
- ◆ **Adjustable Output Voltages (External Resistors)**
- ◆ **Selectable Frequency (640kHz/1.2MHz)**
- ◆ **Two High-Speed Operational Amplifiers**
- ◆ **Low-Profile Surface-Mount Components**
- ◆ **Fully Assembled and Tested**

MAX17115 Evaluation Kit

Evaluates: MAX17115

Quick Start

Recommended Equipment

- +4.5V to +5.5V DC power supply
- Voltmeter

Procedure

The MAX17115 EV kit is fully assembled and tested. Follow the steps below to verify board operation.

Caution: Do not turn on the power supply until all connections are completed.

- 1) Verify that all jumpers are in their default positions (see the *Jumper Selection* section).
- 2) Connect the positive terminal of the power supply to the VIN pad. Connect the negative terminal of the power supply to the PGND pad.
- 3) Turn on the power supply and verify that the step-up switching regulator output (VMAIN) is +16V.
- 4) Verify that the LDO linear regulator output (VREF_O) is approximately +15V.
- 5) Verify that the gate-on supply (VGON) is approximately +30V.
- 6) Verify that the gate-off supply (VGOFF) is approximately -6.8V.
- 7) Verify that the buffer amplifier (OPO) is approximately +6.4V.

Detailed Description of Hardware

The MAX17115 EV kit contains a high-performance step-up regulator, a high-accuracy, high-voltage low-dropout (LDO) linear regulator, a positive single-stage charge pump, a negative single-stage charge pump with a shunt voltage regulator, and a high-performance buffer amplifier. The EV kit operates from a DC power supply between +4.5V and +5.5V.

Although the MAX17115 IC has a +2.5V to +5.5V input supply range, the EV kit is optimized to operate from a DC supply voltage of +4.5V to +5.5V. The step-up switching regulator is configured for a +16V output providing at least 500mA. The high-accuracy, high-voltage LDO linear regulator is configured for a +15V output providing at least 20mA. The gate-on (VGON) supply voltage is configured for a +30V output providing at

least 20mA. The gate-off (VGOFF) supply voltage is configured for a -6.8V output providing at least 20mA. The high-performance buffer amplifier is configured for a +6.4V output providing a 200mA output short-circuit current.

Step-Up Regulator Output-Voltage Selection (VMAIN)

The output voltage of the main step-up regulator is set by connecting a resistive voltage-divider from the output (VMAIN) to AGND with the center tap connected to FB. Select R14 in the 10kΩ to 50kΩ range. Calculate R13 with the following equation:

$$R13 = R14 \times \left(\frac{V_{VMAIN}}{V_{FB}} - 1 \right)$$

where V_{FB} , the step-up regulator's feedback set point, is 1.24V.

High-Voltage LDO Linear Regulator Output-Voltage Selection (VREF_O)

The output voltage of the high-accuracy LDO linear regulator is set by connecting a resistive voltage-divider from the output (VREF_O) to AGND with the center tap connected to VREF_FB. Select R10 in the 10kΩ to 50kΩ range. Calculate R9 with the following equation:

$$R9 = R10 \times \left(\frac{V_{VREF_O}}{V_{VREF_FB}} - 1 \right)$$

where V_{VREF_FB} , the LDO linear regulator's feedback set point, is 1.24V.

Buffer Amplifier Output-Voltage Selection (OPO)

The output voltage of the buffer amplifier is set by connecting a resistive voltage-divider from the output (VMAIN) to AGND with the center tap connected to OPI. Calculate R1 with the following equation:

$$R1 = R2 \times \left(\frac{V_{VMAIN}}{V_{OPI}} - 1 \right)$$

where V_{OPI} , the buffer amplifier's noninverting input, equals the desired buffer output (OPO).

MAX17115 Evaluation Kit

Jumper Selection

Several jumper settings in the following tables illustrate features of the MAX17115 EV kit.

Enable Control Input (EN)

Connect EN to AGND to disable the step-up switching regulator operation. Connect EN to VIN to enable the boost operation. See Table 1 for jumper JU1 functions.

Frequency Select Input (FREQ)

Connect FREQ to AGND to select the step-up regulator's 640kHz operating frequency. Connect FREQ to VIN to select the step-up regulator's 1.2MHz operating frequency. See Table 2 for jumper JU2 functions.

Table 1. Jumper JU1 Functions

SHUNT POSITION	EN PIN	EV KIT OUTPUTS
Installed	EN connected to AGND	Outputs disabled (VMAIN = 0V)
Not installed*	EN connected to VIN through R3	Outputs enabled (VMAIN = 16V)

*Default position.

Table 2. Jumper JU2 Functions

SHUNT POSITION	FREQ PIN	OPERATION OF FREQUENCY
Installed	FREQ connected to AGND	640kHz
Not installed*	FREQ connected to VIN through R4	1.2MHz

*Default position.

High-Voltage Stress Control Input (HVS_EN)

Connect HVS_EN to VIN to turn on the internal switch between RHVS and AGND. Connect HVS_EN to AGND to make the RHVS pin high-impedance. See Table 3 for jumper JU3 functions.

High-Voltage Switch Control Input (VFLK)

When VFLK is connected to VIN, the high-voltage switch between VGH and VGHM is on and the high-voltage switch between VGHM and DRN is off. When VFLK is connected to AGND, the switch between VGH and VGHM is off and the switch between VGHM and DRN is on. See Table 4 for jumper JU4 functions.

Table 3. Jumper JU3 Functions

SHUNT POSITION	HVS_EN PIN	RHVS
Installed	HVS_EN connected to VIN	RHVS connected to AGND
Not installed*	HVS_EN connected to AGND through R5	RHVS at high impedance

*Default position.

Table 4. Jumper JU4 Functions

SHUNT POSITION	VFLK	VGHM
Installed*	VFLK connected to VIN	VGHM = VGON
Not installed	VFLK connected to AGND through R6	VGHM = VDRN

*Default position.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
