

## ADG733/ADG734

### FEATURES

1.8 V to 5.5 V Single Supply  
 $\pm 2.5$  V Dual Supply  
 2.5  $\Omega$  On Resistance  
 0.5  $\Omega$  On Resistance Flatness  
 100 pA Leakage Currents  
 19 ns Switching Times  
 Triple SPDT: ADG733  
 Quad SPDT: ADG734  
 Small TSSOP and QSOP Packages  
 Low Power Consumption  
 TTL/CMOS Compatible Inputs

### APPLICATIONS

Data Acquisition Systems  
 Communication Systems  
 Relay Replacement  
 Audio and Video Switching  
 Battery Powered Systems

### GENERAL DESCRIPTION

The ADG733 and ADG734 are low voltage, CMOS devices comprising three independently selectable SPDT (single pole, double throw) switches and four independently selectable SPDT switches respectively.

Low power consumption and operating supply range of 1.8 V to 5.5 V and dual  $\pm 2.5$  V make the ADG733 and ADG734 ideal for battery powered, portable instruments. All channels exhibit break-before-make switching action preventing momentary shorting when switching channels. An  $\overline{\text{EN}}$  input on the ADG733 is used to enable or disable the device. When disabled, all channels are switched OFF.

These 2–1 multiplexers/SPDT switches are designed on an enhanced submicron process that provides low power dissipation yet gives high switching speed, very low on resistance, high signal bandwidths, and low leakage currents. On resistance is in the region of a few ohms, is closely matched between switches, and is very flat over the full signal range. These parts can operate equally well in either direction and have an input signal range that extends to the supplies.

The ADG733 is available in small TSSOP and QSOP packages, while the ADG734 is available in a small TSSOP package.

### PRODUCT HIGHLIGHTS

1. Single/Dual Supply Operation. The ADG733 and ADG734 are fully specified and guaranteed with 3 V and 5 V single supply rails and  $\pm 2.5$  V dual supply rails.
2. Low On Resistance (2.5  $\Omega$  typical)
3. Low Power Consumption ( $< 0.01$   $\mu\text{W}$ )
4. Guaranteed Break-Before-Make Switching Action

### NOTES

<sup>1</sup> Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those listed in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Only one absolute maximum rating may be applied at any one time.

<sup>2</sup> Overvoltages at A, EN, IN, S, or D will be clamped by internal diodes. Current should be limited to the maximum ratings given.

## CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although the ADG733/ADG734 feature proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.
