

# STM6717/6718/6719/6720 STM6777/6778/6779/6780

Dual/triple ultra-low voltage supervisors  
with push-button reset (with delay option)

## Features

- Primary supply ( $V_{CC1}$ ) monitor.  
Fixed (factory-programmed) reset thresholds:  
4.63 V to 1.58 V
- Secondary supply ( $V_{CC2}$ ) monitor  
(STM6717/18/19/20/77/78)
- Fixed (factory-programmed) reset thresholds:  
3.08 V to 0.79 V
- Tertiary supply monitor (using externally  
adjustable RSTIN): 0.626 V internal reference
- $\overline{RST}$  outputs (push-pull or open drain); state  
guaranteed if  $V_{CC1}$  or  $V_{CC2} \geq 0.8$  V
- Reset delay time ( $t_{rec}$ ) on power-up: 13.2 ms,  
210 ms, 900 ms (typ)
- Manual reset input ( $\overline{MR}$ )
- Optional delayed manual reset input (MRC)  
with external capacitor (STM6777/78/79/80)
- Low supply current - 11  $\mu$ A (typ),  
 $V_{CC1} = V_{CC2} = 3.6$  V
- Operating temperature:  $-40$  °C to  $85$  °C  
(industrial grade)

# 1 Description

The STM6717/18/19/20 and STM6777/78/79/80 supervisors are a family of low-voltage/low-supply current processor (micro or DSP) supervisors, designed to monitor two (or three) system power supply voltages. They are targeted at applications such as set-top boxes (STBs), portable, battery-powered systems, networking, and communication systems.

All device options have a push-button-type manual reset input ( $\overline{\text{MR}}$ ). The STM6777/78/79/80 also includes an option which enables the user to delay the start of the manual reset process from 6  $\mu\text{s}$  (MRC pin left open) or more with external capacitor. The delay is implemented by connecting the appropriately sized capacitor between the MRC pin and  $V_{\text{SS}}$  (typical 4 s delay with a 3.3  $\mu\text{F}$  capacitor, see [Table 7 on page 21](#)).

Two of the three supplies monitored ( $V_{\text{CC1}}$  and  $V_{\text{CC2}}$ ) have fixed (customer-selectable, factory-trimmed) thresholds ( $V_{\text{RST1}}$  and  $V_{\text{RST2}}$ ). The third voltage is monitored using an externally adjustable RSTIN threshold (0.626 V internal reference).

If any of the three monitored voltages drop below its factory-trimmed or adjustable thresholds, or if  $\overline{\text{MR}}$  is asserted to logic low, a  $\overline{\text{RST}}$  is asserted (driven low). Once asserted,  $\overline{\text{RST}}$  is maintained at low for a minimum delay period ( $t_{\text{rec}}$ ) after ALL supplies rise above their respective thresholds and  $\overline{\text{MR}}$  returns to high. These devices are guaranteed to be in the correct reset output logic state when  $V_{\text{CC1}}$  and/or  $V_{\text{CC2}}$  is greater than 0.8 V.

These devices are available in standard 5-pin or 6-pin SOT23 packages (see [Table 1 on page 1](#)).

## 1.1 Pin descriptions

### 1.1.1 Active-low, push-pull reset output ( $\overline{RST}$ ) - STM6718/20/78/80

The  $\overline{RST}$  pin is driven low and stays low whenever  $V_{CC1}$  or  $V_{CC2}$  or RSTIN falls below its factory-trimmed or adjustable reset threshold or when MR goes to logic low. It remains low for  $t_{rec}$  after ALL supply voltages being monitored rise above their reset thresholds and MR goes from low to high. (Push-pull outputs are referenced to  $V_{CC1}$ .)

### 1.1.2 Active-low, open drain reset output ( $\overline{RST}$ ) - STM6717/19/77/79

The  $\overline{RST}$  pin is driven low and stays low whenever  $V_{CC1}$  or  $V_{CC2}$  or RSTIN falls below its factory-trimmed or adjustable reset threshold or when MR goes to logic low. It remains low for  $t_{rec}$  after ALL supply voltages being monitored rise above their reset thresholds and MR goes from low to high. Connect an external pull-up resistor to  $V_{CC1}$ . A 10 kΩ pull-up resistor should be sufficient for most applications.

### 1.1.3 Push-button reset input ( $\overline{MR}$ )

When  $\overline{MR}$  goes low the  $\overline{RST}$  output is driven low.  $\overline{RST}$  remains low as long as  $\overline{MR}$  is low and for  $t_{rec}$  after  $\overline{MR}$  returns to high. This active-low input has an internal 50 kΩ pull-up resistor to

$V_{CC1}$ . It can be driven from a TTL or CMOS logic line, or with open drain/collector outputs, or connected to  $V_{SS}$  through a switch. If unused, leave this pin open or connect it to  $V_{CC1}$ .

Connect a normally open momentary switch from  $\overline{MR}$  to  $V_{SS}$ ; external debounce circuitry is not required. (If  $\overline{MR}$  is driven from long cables or if the device is used in noisy environments, connecting a 0.1 $\mu$ F capacitor from  $\overline{MR}$  to  $V_{SS}$  provides additional noise immunity.

#### 1.1.4 Manual reset delay input (MRC) - STM6777/78/79/80)

This pin is either left open or connected to  $V_{SS}$  via a capacitor. By selecting the appropriate capacitor, the manual reset process, initiated by pressing the push-button manual reset input, can be delayed by any value from 6  $\mu$ s or more (see [Table 7 on page 21](#)).

#### 1.1.5 Primary supply voltage monitoring input ( $V_{CC1}$ )

It also is the input for the primary reset threshold monitor. Available fixed (customer-selectable, factory-programmed) reset thresholds include 4.63 V to 1.58 V.

#### 1.1.6 Secondary supply voltage monitoring input ( $V_{CC2}$ )

This function is available on the STM6717/18/19/20/77/78. Fixed (customer-selectable, factory-programmed) reset thresholds include 3.08 V to 0.79 V.

#### 1.1.7 Adjustable reset comparator input (RSTIN; STM6719/20/79/80)

This is a high impedance input.  $\overline{RST}$  is driven low when the voltage at the RSTIN pin falls below 0.626 V (internal reference voltage at this comparator). The monitored voltage reset threshold is set with an external resistor-divider network.

**Table 3. Pin functions**

Pin				Name	Function
STM6717 STM6718	STM6719 STM6720	STM6777 STM6778	STM6779 STM6780		
1	1	1	1	$\overline{RST}$	Active-low reset output
3	3	3	3	$\overline{MR}$	Push-button reset input
—	—	5	4	MRC	Manual reset delay input
5	6	6	6	$V_{CC1}$	Primary supply voltage input
4	4	4	—	$V_{CC2}$	Secondary supply voltage input
—	5	—	5	RSTIN	Adjustable reset comparator input
2	2	2	2	$V_{SS}$	Ground

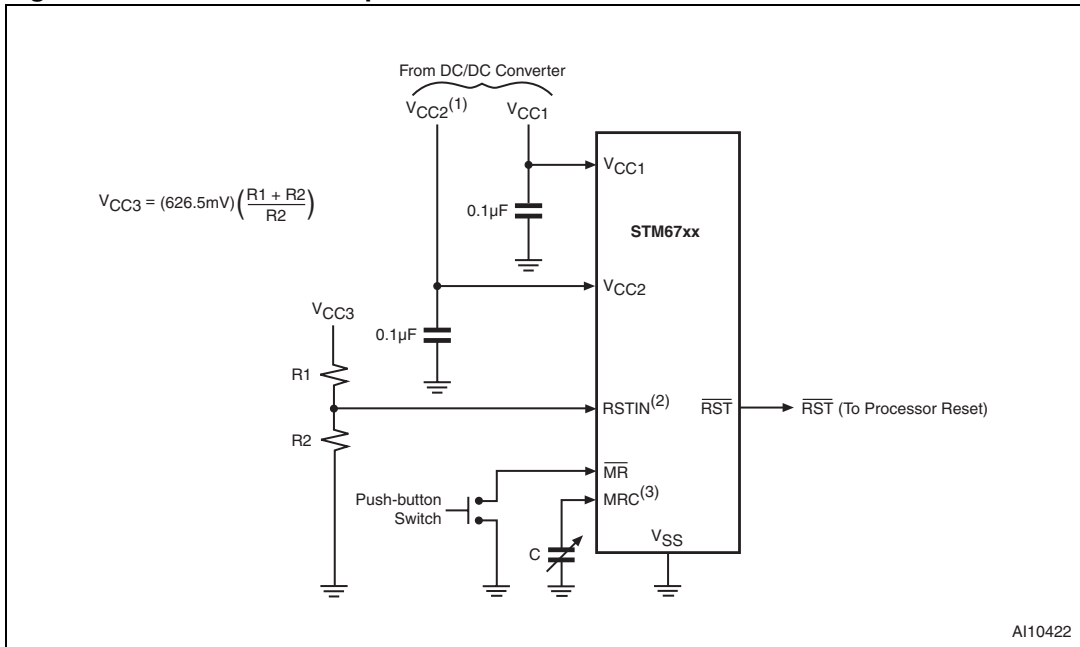

**Figure 9. Block diagram**

1. V<sub>CC2</sub> input is available on STM6717/18/19/20/77/78.
2. RSTIN available only on STM6719/20/79/80.
3. MRC available only on STM6777/78/79/80.

2. RSTIN available only on STM6719/20/79/80.
3. MRC available only on STM6777/78/79/80.

## 2 Operation

### 2.1 Applications information

1. Interfacing to processors with bi-directional reset pins

Most processors with bi-directional reset pins can interface directly to the open drain  $\overline{RST}$  outputs (STM6717/19/77/79). Systems simultaneously requiring a push-pull  $\overline{RST}$  output and a bi-directional reset interface can be in logic contention. To prevent this contention, connect a 4.7 k $\Omega$  resistor between  $\overline{RST}$  and the processor's reset I/O as shown in [Figure 11](#).

2. Ensuring a valid  $\overline{RST}$  output down to  $V_{CC} = 0$  V

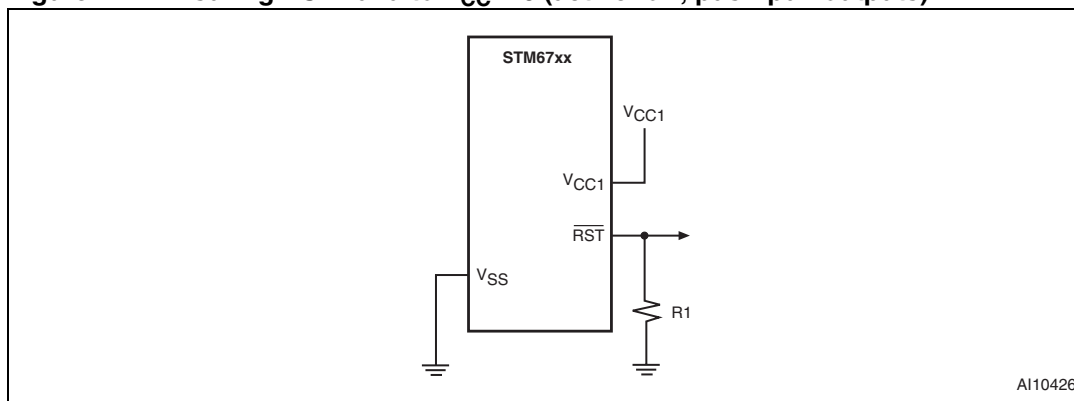

The STM67xx supervisors are guaranteed to be in the correct  $\overline{RST}$  output logic state when  $V_{CC1}$  and/or  $V_{CC2}$  is greater than 0.8 V. In applications which require valid reset levels down to  $V_{CC} = 0$ , a pull-down resistor to active-low outputs (push-pull only, see [Figure 12](#)) will ensure that the reset line is valid while the reset output can no longer sink or source current. This scheme does NOT work with the open drain outputs of the STM6717/19/77/79.

The resistor value used is not critical, but it must be large enough not to load the reset output when  $V_{CC}$  is above the reset threshold. For most applications, 100 k $\Omega$  is adequate.

**Figure 11. STM67xx interface to processor with bi-directional reset pins**

**Figure 12. Ensuring  $\overline{RST}$  valid to  $V_{CC} = 0$  (active-low, push-pull outputs)**

### 3 Typical operating characteristics

Note: Typical values are at  $T_A = 25\text{ }^\circ\text{C}$  unless otherwise noted.

## 4 Maximum rating

Stressing the device above the rating listed in the Absolute Maximum Ratings” table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality documents.

**Table 4. Absolute maximum ratings**

Symbol	Parameter	Value	Unit
$T_{STG}$	Storage temperature ( $V_{CC}$ off)	-55 to 150	°C
$T_{SLD}^{(1)}$	Lead solder temperature for 10 seconds	260	°C
$V_{IO}$	Input or output voltage	-0.3 to $V_{CC1} + 0.3$	V
		-0.3 to $V_{CC2} + 0.3$	V
$V_{CC1}, V_{CC2}$	Supply voltage	-0.3 to 7.0	V
$I_{IO}$	Input or output current (all pins)	20	mA
$P_D$	Power dissipation	SOT23-5	654
		SOT23-6	675

1. Reflow at peak temperature of 260 °C. The time above 255 °C must not exceed 30 seconds.

## 5 DC and AC parameters

This section summarizes the operating measurement conditions, and the DC and AC characteristics of the device. The parameters in the DC and AC characteristics tables that follow, are derived from tests performed under the measurement conditions summarized in [Table 5: Operating and AC measurement conditions](#). Designers should check that the operating conditions in their circuit match the operating conditions when relying on the quoted parameters.

**Table 5. Operating and AC measurement conditions**

Parameter	STM67xx	Unit
V <sub>CC</sub> supply voltage	0.8 to 5.5	V
Ambient operating temperature (T <sub>A</sub> )	-40 to 85	°C
Input rise and fall times	≤ 5	ns
Input pulse voltages	0.2 to 0.8V <sub>CC</sub>	V
Input and output timing ref. voltages	0.3 to 0.7V <sub>CC</sub>	V

**Figure 25. AC testing input/output waveforms**

**Figure 26. MR timing waveform (STM6717/18/19/20)**

**Figure 27. MR timing waveform (STM6777/78/79/80)**

1. By connecting a certain capacitor between the MRC pin and V<sub>SS</sub>, the RST can be delayed from 6 μs or more (t<sub>MLMH</sub>, see [Table 7 on page 21](#)).

		$\overline{MR}$ glitch immunity (STM6717/18/19/20)			100		ns
		$\overline{MR}$ pull-up resistance		25	50	80	k $\Omega$

- Valid for ambient operating temperature:  $T_A = -40$  to  $85$  °C;  $V_{CC1} = 0.8$  to  $5.5$  V and  $V_{CC2} = 0.8$  to  $3.6$  V (except where noted).
- Input leakage for the MRC pin is not tested.
- Guaranteed by design.
- The leakage current measured on the  $\overline{RST}$  pin is tested with the reset de-asserted (output high impedance).

Table 7.  $t_{MLMH}$  minimum pulse width

$V_{CC1}$	Capacitor value <sup>(1)</sup>					
	100 pF	0.1 $\mu\text{F}$	2.2 $\mu\text{F}$	3.3 $\mu\text{F}$	4.7 $\mu\text{F}$	6.8 $\mu\text{F}$
1.6 V	120 $\mu\text{s}$	120 ms	2.6 s	4.0 s	5.6 s	8.2 s
2.0 V	122 $\mu\text{s}$	122 ms	2.7 s	4.0 s	5.8 s	8.3 s
3.0 V	125 $\mu\text{s}$	125 ms	2.7 s	4.1 s	5.9 s	8.5 s
4.0 V	128 $\mu\text{s}$	129 ms	2.8 s	4.2 s	6.0 s	8.7 s
5.0 V	130 $\mu\text{s}$	130 ms	2.8 s	4.3 s	6.1 s	8.8 s

- At  $25$  °C (typical)

## 6 Package mechanical data

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK<sup>®</sup> packages, depending on their level of environmental compliance. ECOPACK<sup>®</sup> specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com). ECOPACK<sup>®</sup> is an ST trademark.

B: $t_{rec} = 8.8$ ms to 17.6 ms						
G: $t_{rec} = 600$ ms to 1200 ms						
<b>Package</b>						
WY = SOT23-5						
WB = SOT23-6						
<b>Temperature range</b>						
6 = -40 to 85°C						
<b>Shipping method</b>						
E = ECOPACK <sup>®</sup> package, tubes						
F = ECOPACK <sup>®</sup> package, tape and reel						
R <sup>(4)</sup> = ECOPACK <sup>®</sup> package, tape and reel (pin 1 at top right).						

1. These are standard versions and are typically held in stock. A non-standard version may require a higher minimum volumes, and/or longer delivery times. For other options, or for more information on any aspect of this device, please contact the ST sales office nearest you.
2. Available in STM6719 version only.
3. Available in STM6717 version only.
4. Available for STM6720SY, STM6719SF and STM6719SFB versions only.

Table 12. Marking description

Part number	V <sub>RST1</sub> threshold (V)	V <sub>RST2</sub> threshold (V)	Topside marking	Bottomside marking
STM6717SD	2.925	0.788	7SD1	PYWW

STM6777TZ	3.075	2.313	7TZ5	PYWW

Table 12. Marking description (continued)

Part number	$V_{RST1}$ threshold (V)	$V_{RST2}$ threshold (V)	Topside marking	Bottomside marking
STM6778SF	2.925	1.050	7SF6	PYWW
STM6778TG	3.075	1.110	7TG6	PYWW
STM6778TW	3.075	1.665	7TW6	PYWW
STM6778SV	2.925	1.575	7SV6	PYWW
STM6778SY	2.925	2.188	7SY6	PYWW
STM6778TZ	3.075	2.313	7TZ6	PYWW
STM6779L	4.625	—	7Lx7	PYWW
STM6779T	3.075	—	7Tx7	PYWW
STM6779S	2.925	—	7Sx7	PYWW
STM6779Y	2.188	—	7Yx7	PYWW
STM6779V	1.575	—	7Vx7	PYWW
STM6780L	4.625	—	7Lx8	PYWW
STM6780T	3.075	—	7Tx8	PYWW
STM6780S	2.925	—	7Sx8	PYWW
STM6780Y	2.188	—	7Yx8	PYWW
STM6780V	1.575	—	7Vx8	PYWW

Note: For topside marking, “7” is the family number, followed by the  $V_{RST1}$  threshold,  $V_{RST2}$  threshold and device number (1,9 = STM6717, 2 = 6718, 3 = 6719, 4 = 6720, 5 = 6777, 6 = 6778, 7 = 6779, 8 = 6780).

For bottomside marking, “P” = assembly site, “Y” = 1-digit year, and “WW” = 2-digit work week.

## 8 Revision history

**Table 13. Document revision history**

Date	Revision	Changes
18-Oct-2004	1	First draft
25-Oct-2004	1.1	Descriptive text, sales types ( <a href="#">Table 11</a> )
14-Jan-2005	1.2	Update characteristics, pin functions ( <a href="#">Table 2</a> )
09-Feb-2005	1.3	Update characteristics ( <a href="#">Figure 9</a> ; <a href="#">Table 3</a> )
08-Apr-2005	1.4	Update characteristics and mechanical dimensions; add table ( <a href="#">Figure 9</a> , <a href="#">10</a> , <a href="#">27</a> , <a href="#">28</a> , <a href="#">29</a> ; <a href="#">Table 4</a> , <a href="#">6</a> , <a href="#">11</a> , <a href="#">8</a> , <a href="#">9</a> )
28-Jul-2005	1.5	Update characteristics, reset delay ( <a href="#">Figure 10</a> , <a href="#">27</a> ; <a href="#">Table 4</a> , <a href="#">6</a> , <a href="#">7</a> , <a href="#">11</a> )
13-Sep-2005	2	Add operating characteristics; update timings, document status, Lead-free text ( <a href="#">Figure 13</a> , <a href="#">14</a> , <a href="#">15</a> , <a href="#">16</a> , <a href="#">17</a> , <a href="#">18</a> , <a href="#">19</a> , <a href="#">20</a> , <a href="#">21</a> , <a href="#">22</a> , <a href="#">23</a> , <a href="#">24</a> , <a href="#">26</a> , <a href="#">27</a> ; <a href="#">Table 11</a> )
07-Oct-2005	3	Marked STM6779/6780 as availability request parts ( <a href="#">Table 1</a> , <a href="#">11</a> )
07-Feb-2007	4	Updated STM6779/6780 availability (cover page, <a href="#">Table 1</a> , <a href="#">11</a> )
12-Jun-2007	5	Updated <a href="#">Table 11</a> , added <a href="#">Table 12: Marking description</a> .
05-Dec-2007	6	Updated cover page, <a href="#">Table 6</a> , <a href="#">11</a> , and <a href="#">12</a> .
22-Mar-2010	7	Updated <a href="#">Features</a> ; <a href="#">Table 6</a> , <a href="#">8</a> , <a href="#">9</a> , <a href="#">11</a> , <a href="#">12</a> ; footnote <a href="#">1</a> of <a href="#">Table 4</a> ; <a href="#">Section 6: Package mechanical data</a> ; added tape and reel specifications ( <a href="#">Figure 30</a> , <a href="#">Table 10</a> , footnote <a href="#">4</a> of <a href="#">Table 11</a> ); reformatted document.
02-Aug-2011	8	Removed footnote from <a href="#">Table 6: DC and AC characteristics</a> .

**Please Read Carefully:**

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

**UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.**

**UNLESS EXPRESSLY APPROVED IN WRITING BY TWO AUTHORIZED ST REPRESENTATIVES, ST PRODUCTS ARE NOT RECOMMENDED, AUTHORIZED OR WARRANTED FOR USE IN MILITARY, AIR CRAFT, SPACE, LIFE SAVING, OR LIFE SUSTAINING APPLICATIONS, NOR IN PRODUCTS OR SYSTEMS WHERE FAILURE OR MALFUNCTION MAY RESULT IN PERSONAL INJURY, DEATH, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE. ST PRODUCTS WHICH ARE NOT SPECIFIED AS "AUTOMOTIVE GRADE" MAY ONLY BE USED IN AUTOMOTIVE APPLICATIONS AT USER'S OWN RISK.**

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
