

## Low-Cost, UCSP/SOT23, Micropower, High-Side Current-Sense Amplifier with Voltage Output

### General Description

The MAX4372 low-cost, precision, high-side current-sense amplifier is available in a tiny, space-saving SOT23-5-pin package. Offered in three gain versions (T = 20V/V, F = 50V/V, and H = 100V/V), this device operates from a single 2.7V to 28V supply and consumes only 30µA. It features a voltage output that eliminates the need for gain-setting resistors and is ideal for today's notebook computers, cell phones, and other systems where battery/DC current monitoring is critical.

High-side current monitoring is especially useful in battery-powered systems since it does not interfere with the ground path of the battery charger. The input common-mode range of 0 to 28V is independent of the supply voltage and ensures that the current-sense feedback remains viable even when connected to a 2-cell battery pack in deep discharge.

The user can set the full-scale current reading by choosing the device (T, F, or H) with the desired voltage gain and selecting the appropriate external sense resistor. This capability offers a high level of integration and flexibility, resulting in a simple and compact current-sense solution. For higher bandwidth applications, refer to the MAX4173T/F/H data sheet.

### Applications

- Power-Management Systems
- General-System/Board-Level Current Monitoring
- Notebook Computers
- Portable/Battery-Powered Systems
- Smart-Battery Packs/Chargers
- Cell Phones
- Precision-Current Sources

### Pin Configurations

### Features

- ◆ Low-Cost, Compact Current-Sense Solution
- ◆ 30µA Supply Current
- ◆ 2.7V to 28V Operating Supply
- ◆ 0.18% Full-Scale Accuracy
- ◆ 0.3mV Input Offset Voltage
- ◆ Low 1.5Ω Output Impedance
- ◆ Three Gain Versions Available
  - 20V/V (MAX4372T)
  - 50V/V (MAX4372F)
  - 100V/V (MAX4372H)
- ◆ High Accuracy +2V to +28V Common-Mode Range, Functional Down to 0V, Independent of Supply Voltage
- ◆ Available in a Space-Saving 5-Pin SOT23 Package and 3 x 2 UCSP™ (1mm x 1.5mm) Package

### Ordering Information

PART	TEMP RANGE	PIN-PACKAGE	TOP MARK
MAX4372TEUK+T	-40°C to +85°C	5 SOT23-5	ADIU
MAX4372TESA+T	-40°C to +85°C	8 SO	—
MAX4372TEBT+T	-40°C to +85°C	3 x 2 UCSP	ACX

+ Denotes a lead(Pb)-free/RoHS-compliant package.  
T = Tape and reel.

**Note:** Gain values are as follows: 20V/V for the T version, 50V/V for the F version, and 100V/V for the H version.

**Ordering Information continued at end of datasheet.**

2	4	A3	OUT	Output Voltage. $V_{OUT}$ is proportional to the magnitude of $V_{SENSE}$ ( $V_{RS+} - V_{RS-}$ ).
3	1	A1	$V_{CC}$	Supply Voltage. Use at least a 0.1 $\mu$ F capacitor to decouple $V_{CC}$ from fast transients.
4	8	B1	$RS+$	Power Connection to the External Sense Resistor
5	6	B3	$RS-$	Load-Side Connection to the External Sense Resistor
—	2, 5, 7	—	N.C.	No Connection. Not internally connected.

### Detailed Description

The MAX4372 high-side current-sense amplifier features a 0 to 28V input common-mode range that is independent of supply voltage. This feature allows the monitoring of current flow out of a battery in deep discharge, and also enables high-side current sensing at voltages far in excess of the supply voltage ( $V_{CC}$ ).

Current flows through the sense resistor, generating a sense voltage (Figure 1). Since A1's inverting input is high impedance, the voltage on the negative terminal equals  $V_{IN} - V_{SENSE}$ . A1 forces its positive terminal to match its negative terminal; therefore, the voltage across  $R_{G1}$  ( $V_{IN} - V_{1-}$ ) equals  $V_{SENSE}$ . This creates a current to flow through  $R_{G1}$  equal to  $V_{SENSE} / R_{G1}$ . The transistor and current mirror amplify the current by a factor of  $\beta$ . This makes the current flowing out of the current mirror equal to:

$$I_M = \beta V_{SENSE} / R_{G1}$$

A2's positive terminal presents high impedance, so this current flows through  $R_{GD}$ , with the following result:

$$V_{2+} = R_{GD} \beta \cdot V_{SENSE} / R_{G1}$$

$R_1$  and  $R_2$  set the closed-loop gain for A2, which amplifies  $V_{2+}$ , yielding:

$$V_{OUT} = R_{GD} \cdot \beta \cdot V_{SENSE} / R_{G1} (1 + R_2 / R_1)$$

The gain of the device equals:

$$\frac{V_{OUT}}{V_{SENSE}} = R_{GD} \cdot \beta (1 + R_2 / R_1) / R_{G1}$$

### Applications Information

#### Recommended Component Values

The MAX4372 operates over a wide variety of current ranges with different sense resistors. Table 1 lists common resistor values for typical operation of the MAX4372.

Figure 1. Functional Diagram

#### Choosing RSENSE

Given the gain and maximum load current, select  $R_{SENSE}$  such that  $V_{OUT}$  does not exceed  $V_{CC} - 0.25V$  or 10V. To measure lower currents more accurately, use a high value for  $R_{SENSE}$ . A higher value develops a higher sense voltage, which overcomes offset voltage errors of the internal current amplifier.

In applications monitoring very high current, ensure  $R_{SENSE}$  is able to dissipate its own  $I^2R$  losses. If the resistor's rated power dissipation is exceeded, its value may drift or it may fail altogether, causing a differential voltage across the terminals in excess of the absolute maximum ratings.

### Using a PC Board Trace as R<sub>SENSE</sub>

If the cost of R<sub>SENSE</sub> is an issue and accuracy is not critical, use the alternative solution shown in Figure 2. This solution uses copper PC board traces to create a sense resistor. The resistivity of a 0.1-inch-wide trace of 2-ounce copper is about 30mΩ/ft. The resistance temperature coefficient of copper is fairly high (approximately 0.4%/°C), so systems that experience a wide temperature variance must compensate for this effect. In addition, self-heating will introduce a nonlinearity error. Do not exceed the maximum power dissipation of the copper trace.

For example, the MAX4372T (with a maximum load current of 10A and an R<sub>SENSE</sub> of 5mΩ) creates a full-scale V<sub>SENSE</sub> of 50mV that yields a maximum V<sub>OUT</sub> of 1V. R<sub>SENSE</sub>, in this case, requires about 2 inches of 0.1-inch-wide copper trace.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
