

## TRANSIENT VOLTAGE SUPPRESSOR

# VRD

VRD is a transient voltage suppressor used for protecting electric circuits from surge voltage and thus preventing breakdown.

VRD has superior surge suppression characteristics, such as extremely fast response time, very low clamping voltage, and high surge capacity. Unlike metal oxide varistors, VRD does not have characteristics to change with surge variations within the rated capacity. This feature comprises another superior characteristics of the VRD as a transient voltage suppressors.

### Electrical characteristics

Figure 1 shows the electrical characteristics. Bipolar type has almost symmetrical breakdown Voltage ( $V_B$ ) The reverse breakdown voltage of the ZD type is 200 Volts or more at  $10\mu A$  DC.

### Surge capability

Allowable surge capability ( $P_{PPM}$ ) is determined by the following equation:

$$P_{PPM} = I_{PPM} \times V_C$$

$I_{PPM}$ : Rated peak impulse current

$V_C$ : clamping voltage

The allowable surge capability (Rated peak impulse power dissipation  $P_{PPM}$ ) of VRD is shown in following Figure 3 and the surge capability derating characteristics are shown in Figure 6.

Fig 3

### Surge waveform

There are many types of surge waveform depending on the source of the surge. For the VRD surge suppression characteristics test, the EXP waveform shown below is used. The EXP waveform is shown as  $t_a/t_b$  depending on the time width, however 10/1000 waveform is used as the standard test waveform.

Fig 4

### Surge suppression characteristics

When EXP waveform is applied, the surge suppression waveform shown in the figure 5 can be observed.

### Power derating

### Z2 type VRD has bipolar or unipolar electrical characteristics.
