

**FEATURES**
**Analog input/output**

- 22-channel, 14-bit, 800 kSPS analog-to-digital converter (ADC)
- 10 external channels
- 1 on-chip die temperature monitor
- 6 current output digital-to-analog converter (IDAC) monitor channels
- 3 power monitor channels
- 2 buffered reference output channels
- Fully differential and single-ended modes
- 0 V to 2.5 V analog input range
- 6 low noise, 12-/14-bit IDAC outputs
  - 1× 250 mA, 1× 200 mA, 2× 100 mA, and 2× 20 mA
- Semiconductor optical amplifier (SOA) IDAC pull-down to -3.0 V for fast current sink

**Eight 12-bit voltage output DACs (VDACs)**

- Channel 0 and Channel 1: 0 V to 3 V, 75 Ω load
- Channel 2 and Channel 3: -5 V to 0 V, 500 Ω load
- Channel 4 and Channel 5: 0 V to 3 V, 300 Ω load
- Channel 6: 0 V to 5 V, 500 Ω load
- Channel 7: 0 V to 5 V, 100 Ω load

- 2.5 V, on-chip voltage reference
- 2 buffered 2.5 V outputs

**Microcontroller**

- ARM Cortex-M3 processor, 32-bit RISC architecture
- Serial wire port supports code download and debugging

**Clocking options**

- Trimmed on-chip oscillator (±3%)
- 80 MHz phase-locked loop (PLL)

External 16 MHz crystal option

External clock source

**Memory**

- 2× 128 kB Flash/EE memories, 32 kB SRAM
- In-circuit download, SW-DP-based debugging
- Software triggered in-circuit reprogrammability

**On-chip peripherals**

- UART, 2× I<sup>2</sup>C and 2× SPI serial input/output
- 28-pin general-purpose input/output (GPIO) port
- 3 general-purpose timers
- Wake-up (W/U) timer
- Watchdog timer (WDT)
- 32-element programmable logic array (PLA)

**Vectored interrupt controller**

- Interrupt on edge or level external pin inputs
- 9× external interrupts

**Power**

- Multiple supplies
- 5 V for VDAC6 and VDAC7
- 3.3 V for digital and analog inputs/outputs
- 1.8 V to 2.7 V for IDACs
- 5 V supply for IDAC3 and VDAC2/VDAC3

**Package and temperature range**

- 6 mm × 6 mm, 112-ball CSP\_BGA package
- Fully specified for -40°C to +85°C ambient operation

**Tools**

- QuickStart™ development system
- Full third party support

**APPLICATIONS**

Optical modules—tunable laser modules

## GENERAL DESCRIPTION

The [ADuCM310](#) is a multichip stack, on-chip system designed for diagnostic control of tunable laser optical module applications.

The [ADuCM310](#) features a 16-bit (14-bit accurate) multichannel successive approximation register (SAR) ADC, an ARM Cortex™-M3 processor, eight voltage DACs (VDACs), six current output DACs, and Flash/EE memory packaged in a 6 mm × 6 mm, 112-ball CSP\_BGA package.

The bottom die in the stack supports the bulk of the low voltage analog circuitry and is the largest of the three die. It contains the ADC, VDACs, main IDAC circuits, as well as other analog support circuits, such as the low drift precision 2.5 V voltage reference source.

The middle die in the stack supports the bulk of the digital circuitry, including the ARM Cortex-M3 processor, the flash and SRAM blocks, and all of the digital communication peripherals. In addition, this die provides the clock sources for the whole chip. A 16 MHz internal oscillator is the source of the internal PLL that outputs an 80 MHz system clock.

The top die, which is the smallest die, was developed on a high voltage process, and this die supports the -5 V and +5 V VDAC outputs. It also implements the SOA IDAC current sink circuit that allows the external SOA diode to pull to a -3.0 V level to implement the fast shutdown of the laser output.

Regarding the individual blocks, the ADC is capable of operating at conversion rates up to 800 kSPS. There are 10 external inputs to the ADC, which can be single ended or differential. Several internal channels are included, such as the supply monitor channels, an on-chip temperature sensor, and internal voltage reference monitors.

The VDACs are 12-bit string DACs with output buffers capable of sourcing between 10 mA and 50 mA, and these DACs are all capable of driving 10 nF capacitive loads.

The low drift current DACs have 14-bit resolution and varied full-scale output ranges from 0 mA to 20 mA to 0 mA to 250 mA on the SOA IDAC (IDAC3). The SOA IDAC also comes with a 0 mA to -80 mA current sink capability.

A precision 2.5 V on-chip reference source is available. The internal ADC, IDACs, and VDAC circuits use this on-chip

reference source to ensure low drift performance for all of these peripherals

The [ADuCM310](#) also provides 2× buffered reference outputs capable of sourcing up to 1.2 mA. These outputs can be used externally to the chip.

The [ADuCM310](#) integrates an 80 MHz ARM Cortex-M3 processor. It is a 32-bit reduced instruction set computer (RISC) machine, offering up to 100 DMIPS peak performance. The ARM Cortex-M3 processor also has a flexible 14-channel direct memory access (DMA) controller supporting serial peripheral interface (SPI), UART, and I<sup>2</sup>C communication peripherals. The [ADuCM310](#) has 256 kB of nonvolatile Flash/EE memory and 32 kB of SRAM integrated on-chip.

A 16 MHz on-chip oscillator generates the 80 MHz system clock. This clock internally divides to allow the processor to operate at lower frequency, thus saving power. A low power internal 32 kHz oscillator is available and can clock the timers. The [ADuCM310](#) includes three general-purpose timers, a wake-up timer (which can be used as a general-purpose timer), and a system watchdog timer.

A range of communication peripherals can be configured as required in a specific application. These peripherals include UART, 2 × I<sup>2</sup>C, 2 × SPI, GPIO ports, and pulse-width modulation (PWM).

On-chip factory firmware supports in-circuit serial download via the UART, while nonintrusive emulation and program download are supported via the serial wire debug port (SW-DP) interface. These features are supported on the [EVAL-ADuCM310QSPZ](#) development system.

The [ADuCM310](#) operates from 2.9 V to 3.6 V and is specified over a temperature range of -40°C to +85°C.

Note that, throughout this data sheet, multifunction pins, such as P1.0/SIN/ECLKIN/PLAI[4], are referred to either by the entire pin name or by a single function of the pin, for example, P1.0, when only that function is relevant.

For additional information on the [ADuCM310](#), see the [ADuCM310](#) reference manual, *How to Set Up and Use the ADuCM310*.

## SPECIFICATIONS

$AV_{DD} = IOV_{DD} = DV_{DD} = 2.9\text{ V to }3.6\text{ V}$  (the input supply voltages). The difference between  $AV_{DD}$ ,  $IOV_{DD}$ , and  $DV_{DD}$  must be  $\leq 0.3\text{ V}$ .  $AV_{NEG}$  (the supply voltage) =  $-5.5\text{ V to }-4.65\text{ V}$ .  $VDACV_{DD}$  (the VDAC supply voltage) =  $3.07\text{ V to }5.35\text{ V}$  (for VDAC6 and VDAC7), and  $VDACV_{DD}$  must be  $\geq AV_{DD}$ .  $PV_{DD}$  (the IDAC supply voltage) for the IDACs =  $1.8\text{ V to }2.7\text{ V}$ .  $AV_{DD} \geq PV_{DD} + 0.4\text{ V}$ .  $V_{REF} = 2.5\text{ V}$  internal reference,  $f_{CORE} = 80\text{ MHz}$ ,  $T_A = -40^\circ\text{C to }+85^\circ\text{C}$ , unless otherwise noted.

For power sequencing, connect the AGND, DGND, PGND, and IOGND pins to ground before applying power to the  $AV_{NEG}$  or  $VDACV_{DD}$  pins.

For register and bit information, see the [ADuCM310](#) reference manual, *How to Set Up and Use the ADuCM310*.

VDAC6 and VDAC7 <sup>2</sup>		1		mA	$I_{DD}$ sourced from the $VDACV_{DD}$ supply when VDAC6 and VDAC7 are driving the maximum allowed load with $DACxDAT$ set to 0

<sup>1</sup> Reduced temperature range of -10°C to +85°C.

<sup>2</sup> These numbers are not production tested but are guaranteed by design or characterization data at production release.

<sup>3</sup> The input current is the total input current including the input pad and mux leakage plus the charge current for the full input circuit. The input current relates to the ADC sampling frequency.

<sup>4</sup> The internal reference calibration and trimming are performed when the processor operates in normal mode with CD = 0, when ADC is enabled and converting, when IDACs are all on, and when VDACS are on.  $V_{REF}$  accuracy can vary under other operating conditions.

<sup>5</sup> Measured using the following box method:

$$\frac{V_{REF} \text{ Maximum (at Any Temperature)} - V_{REF} \text{ Minimum (at Any Temperature)}}{2.5 \times (\text{Temperature Maximum} - \text{Temperature Minimum})} \times 10^6$$

<sup>6</sup> VDAC linearity specifications are calculated with following ranges:

VDAC0 and VDAC1 = +150 mV to +2.699 V

VDAC2 and VDAC3: -150 mV to -4.22 V

VDAC4 and VDAC5: +150 mV to +2.98 V

VDAC6: +150 mV to +4.747 V

VDAC7: +150 mV to +4.297 V

<sup>7</sup> Analog Devices, Inc., production IDAC full-scale trimming conditions include PVDD\_IDACx pin voltage = 0.7 V, all IDACs on.

<sup>8</sup> The long-term stability specifications is noncumulative. The drift in subsequent 1000 hour periods is significantly lower than in the first 1000 hour period.

<sup>9</sup> For all VDAC specifications for VDAC0, VDAC1, VDAC4, and VDAC5, DACxCON[10:9] = 11.

<sup>10</sup> VDACx minimum and maximum limits apply to the internal reference only (DACxCON[1:0] = 00<sub>b</sub>). AVDDx supply valid only with typical specifications.

<sup>11</sup> The average current from the GPIO pins must not exceed 3 mA per pin. See Figure 22.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

## THERMAL RESISTANCE

$\theta_{JA}$  is specified for the worst-case conditions, that is, a device soldered in a circuit board for surface-mount packages.

**Table 9. Thermal Resistance**

Package Type	$\theta_{JA}$	$\theta_{JC}$	Unit
112-Ball CSP_BGA	44.5	11	°C/W

## ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

# PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

Figure 7. Pin Configuration

Table 10. Pin Function Descriptions

Pin No.	Mnemonic	Type <sup>1</sup>	Description
D2	RESET	I	Reset Input (Active Low). An internal pull-up is included on this pin.
E3	P0.0/SCLK0/PLAI[0]	I/O	General-Purpose Input and Output Port 0.0/SPI0 Clock/Input to PLA Element 0. This pin defaults as an input with the internal pull-up resistor disabled.
E2	P0.1/MISO0/PLAI[1]	I/O	General-Purpose Input and Output Port 0.1/SPI0 Data Master Input-Slave Output/Input to PLA Element 1. This pin defaults as an input with the internal pull-up disabled.
F3	P0.2/MOSI0/PLAI[2]	I/O	General-Purpose Input and Output Port 0.2/SPI0 Data Master Output-Slave Input/Input of PLA Element 2. This pin defaults as an input with the internal pull-up disabled.
F2	P0.3/IRQ0/CS0/PLAI[3]	I/O	General-Purpose Input and Output Port 0.3/External Interrupt Request 0/SPI0 Chip Select Input/Input of PLA Element 3. This pin defaults as an input with the internal pull-up disabled. If SPI0 is used, configure this pin as CS0.
G4	P0.4/SCL0/PLAO[2]	I/O	General-Purpose Input and Output Port 0.4/I <sup>2</sup> C Interface Clock for I2C0/Output of PLA Element 2. This pin defaults as an input with the internal pull-up disabled.

Pin No.	Mnemonic	Type <sup>1</sup>	Description
G3	P0.5/SDA0/PLAO[3]	I/O	General-Purpose Input and Output Port 0.5/I <sup>2</sup> C Interface Data for I2C0/Output of PLA Element 3. This pin defaults as an input with internal pull-up disabled.
G2	P0.6/SCL1/PLAO[4]	I/O	General-Purpose Input and Output Port 0.6/I <sup>2</sup> C Interface Clock for I2C1/Output of PLA Element 4. This pin defaults as an input with internal pull-up disabled.
G1	P0.7/SDA1/PLAO[5]	I/O	General-Purpose Input and Output Port 0.7/I <sup>2</sup> C Interface Data for I2C1/Output of PLA Element 5. This pin defaults as an input with internal pull-up disabled.
C4	P1.0/SIN/ECLKIN/PLAI[4]	I/O	General-Purpose Input and Output Port 1.0/UART Input Pin/External Input Clock/Input to PLA Element 4. The ECLKIN pin is used for the UART downloader. This pin defaults as an input with internal pull-up disabled.
D5	P1.1/SOUT/PLACK1/PLAI[5]	I/O	General-Purpose Input and Output Port 1.1/UART Output Pin/PLA Input Clock/Input to PLA Element 5. The PLACK1 pin is used for the UART downloader. This pin defaults as an input with internal pull-up disabled.
C5	P1.2/PWM0/PLAI[6]	I/O	General-Purpose Input and Output Port 1.2/PWM0 Output/Input to PLA Element 6. This pin defaults as an input with internal pull-up disabled.
C6	P1.3/PWM1/PLAI[7]	I/O	General-Purpose Input and Output Port 1.3/PWM1 Output/Input to PLA Element 7. This pin defaults as an input with internal pull-up disabled.
C7	P1.4/PWM2/SCLK1/PLAO[10]	I/O	General-Purpose Input and Output Port 1.4/PWM2 Output/SPI1 Clock/Output of PLA Element 10. This pin defaults as an input with internal pull-up disabled.
C8	P1.5/PWM3/MISO1/PLAO[11]	I/O	General-Purpose Input and Output Port 1.5/PWM3 Output/SPI1 Data Master Input-Slave Output/Output of PLA Element 11. This pin defaults as an input with internal pull-up disabled.
C9	P1.6/PWM4/MOSI1/PLAO[12]	I/O	General-Purpose Input and Output Port 1.6/PWM4 Output/SPI1 Data Master Output-Slave Input/Output of PLA Element 12. This pin defaults as an input with internal pull-up disabled.
D9	P1.7/IRQ1/PWM5/ $\overline{CS1}$ /PLAO[13]	I/O	General-Purpose Input and Output Port 1.7/External Interrupt Request 1/PWM5 Output/SPI1 Chip Select Input/Output of PLA Element 13. This pin defaults as an input with internal pull-up disabled. If SPI1 is used, configure this pin as $\overline{CS1}$ .
D4	P2.0/IRQ2/PWMTRIP/PLACK2/PLAI[8]	I/O	General-Purpose Input and Output Port 2.0/External Interrupt Request 2/PWM Trip Input Source/PLA Input Clock/Input to PLA Element 8. This pin defaults as an input with the internal pull-up disabled.
E8	P2.1/IRQ3/PWMSYNC/PLAI[9]	I/O	General-Purpose Input and Output Port 2.1/External Interrupt Request 3/PWM Sync Input/Input to PLA Element 9. This pin defaults as an input with the internal pull-up disabled.
E4	P2.2/IRQ4/ $\overline{MRST}$ /CLKOUT/PLAI[10]	I/O	General-Purpose Input and Output Port 2.2/External Interrupt Request 4/Reset Out Pin/Clock Output/Input to PLA Element 10. This pin defaults as an input with the internal pull-up disabled.
C3	P2.3/BM	I/O	General-Purpose Input and Output Port 2.3/BM pin. If this pin is low, then the device enters UART download after the next rest sequence. This pin defaults as an input with the internal pull-up disabled.
D7	P2.4/IRQ5/ADCCONV/PWM6/PLAO[18]	I/O	General-Purpose Input and Output Port 2.4/External Interrupt Request 5/External Input to Start ADC Conversions/PWM6 Output/Output of PLA Element 18. This pin defaults as an input with the internal pull-up disabled.
D8	P2.5/IRQ6/PWM7/PLAO[19]	I/O	General-Purpose Input and Output Port 2.5/External Interrupt Request 6/PWM7 Output/Output of PLA Element 19. This pin defaults as an input with the internal pull-up disabled.
H1	P2.6/IRQ7/PLAO[20]	I/O	General-Purpose Input and Output Port 2.6/External Interrupt Request 7/Output of PLA Element 20. This pin defaults as an input with the internal pull-up disabled.
H2	P2.7/IRQ8/PLAO[21]	I/O	General-Purpose Input and Output Port 2.7/External Interrupt Request 8/Output of PLA Element 21. This pin defaults as an input with the internal pull-up disabled.
H3	P3.0/PLAI[12]	I/O	General-Purpose Input and Output Port 3.0/Input to PLA Element 12. This pin defaults as an input with the internal pull-up disabled.

Pin No.	Mnemonic	Type <sup>1</sup>	Description
J3	P3.1/PLAI[13]	I/O	General-Purpose Input and Output Port 3.1/Input to PLA Element 13. This pin defaults as an input with the internal pull-up disabled.
D3	P3.2/PLAI[14]	I/O	General-Purpose Input and Output Port 3.2/Input to PLA Element 14. This pin defaults as an input with the internal pull-up disabled.
J1	P3.4/PLAO[26]	I/O	General-Purpose Input and Output Port 3.4/Output of PLA Element 26. This pin defaults as an input with the internal pull-up disabled.
E10	SWCLK	I	Serial Wire Debug Clock Input Pin.
E9	SWDIO	I/O	Serial Wire Debug Data Input/Output Input Pin.
G11	VREF_1.2	AO	1.2 V Reference Output. This pin cannot be used to source current externally. Connect this pin to AGND via a 470 nF capacitor.
D11	IREF	AI	This pin generates the reference current for the IDACs. Connect this pin to analog ground via a 5 ppm, 3.16 k $\Omega$ external resistor (R <sub>EXT</sub> ).

Pin No.	Mnemonic	Type <sup>1</sup>	Description
J5	DVDD	S	Digital Supply Pin. This pin is the supply for the 16 MHz oscillator, PLL, POR, and digital core, including the flash that requires a regulated 1.8 V supply and a 3 V supply.
F9	VDACV <sub>DD</sub>	S	5 V Analog Supply Pin.
L5, H11	AVDD3, AVDD4	S	Analog Supply Pin (3.3 V).
K3	DVDD_REG1	S	Output of 2.5 V on Chip Low Dropout (LDO) Regulator. Connect a 470 nF capacitor to this pin and DGND. This regulator supplies the inter-die digital interface.
L3	DVDD_REG2	S	Output of 1.8 V on chip LDO regulator. Connect a 470 nF capacitor to this pin and DGND. This regulator supplies flash and the Cortex-M3 processor.
F10	AVDD_REG1	S	Output of 2.5 V on chip LDO regulator. Connect a 470 nF capacitor to this pin and DGND. This regulator supplies the ADC.
G10	AVDD_REG2	S	Output of 2.5 V on chip LDO regulator. Connect a 470 nF capacitor to this pin and DGND. This regulator supplies the IDACs.
K6	AV <sub>NEG</sub>	S	−5 V Supply Pin.
E1	IOVDD1	S	3.3 V GPIO Supply Pin.
L2, D10	DGND1, DGND2	S	Digital Ground Pins.
E11, K1	IOVDD2, IOVDD3	S	3.3 V GPIO Supply Pins.
F1, F11, L1	IOGND1, IOGND2, IOGND3	S	GPIO Ground Pins.
J2	XTALO	DO	Output from the Crystal Oscillator Inverter. If an external crystal is not used, leave this pin unconnected.
K2	XTALI	DI	Input to the Crystal Oscillator Inverter and Input to the Internal Clock Generator Circuits. If an external crystal is not used, connect this pin to the DGND system ground.
J10	BUF_VREF2.5A	AO	Buffered 2.5 V Bias, Maximum Load = 1.2 mA. Connect this pin to AGND via a 100 nF capacitor.
K11	BUF_VREF2.5B	AO	Buffered 2.5 V Bias, Maximum Load = 1.2 mA. Connect this pin to AGND via a 100 nF capacitor.
K10, L10	ADC_CAPN	S	Decoupling Capacitor Connection for ADC Reference Buffer. Connect this pin to AGND.
L11	ADC_CAPP	S	Decoupling Capacitor Connection for ADC Reference Buffer. Connect this pin to a 4.7 μF capacitor and connect the other side of the capacitor to the AGND and the ADC_CAPN pins.
A1, A11, D1, F4, F8, D6, H6	RESERVED		Reserved. Do not connect to this pin.

<sup>1</sup> I is input, I/O is input/output, AO is analog output, AI is analog input, S is supply, DO is digital output, and DI is digital input.

## RECOMMENDED CIRCUIT AND COMPONENT VALUES

Figure 24 shows a typical connection diagram for the ADuCM310.

There are four digital supply balls: IOVDD1, IOVDD2, IOVDD3, and DVDD. Decouple these balls with a 0.1  $\mu\text{F}$  capacitor placed as close as possible to each of the four balls and a 10  $\mu\text{F}$  capacitor at the supply source. Similarly, the analog supply pins, AVDD3 and AVDD4, each require a 0.1  $\mu\text{F}$  capacitor placed as close as possible to each ball with a 10  $\mu\text{F}$  capacitor at the supply source.

The IDACs source their output currents from the PV<sub>DD</sub> supply balls, PVDD\_IDACx. Connect a 100 nF capacitor close to each PVDD supply ball. Place at least one 10  $\mu\text{F}$  capacitor at the source of the PVDD supply (PVDD\_IDACx balls).

The IDAC output filters depend on a 10 nF capacitor placed between the CDAMP\_IDACx ball and the PVDD\_IDACx ball.

The ADC reference requires a 4.7  $\mu\text{F}$  capacitor between the ADC\_CAPN and ADC\_CAPP balls. Directly connect ADC\_CAPN to the analog ground (AGND).

The ADuCM310 contains four internal regulators. These regulators require external decoupling capacitors. The DVDD\_REG1 and DVDD\_REG2 balls each requires a 0.47  $\mu\text{F}$  capacitor to the digital ground (DGND). The AVDD\_REG1 and AVDD\_REG2 balls each requires a decoupling capacitor to the AGND.

To generate an accurate and low drift reference current, connect the IREF ball to the analog ground via a low parts per million (ppm) 3.16 k $\Omega$  resistor.

Connect the VREF\_1.2 ball to AGND via a 0.47  $\mu\text{F}$  capacitor.

See Figure 24 for more details.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
