## FRACTIONAL-N PLLs w/ INTEGRATED VCO 1095 - 1275, 2190 - 2550, 4380 - 5100 MHz

### General Description

The HMC820LP6CE is a fully functioned Fractional-N Phase-Locked-Loop (PLL) with an Integrated Voltage Controlled Oscillator (VCO). The PLL consists of an integrated low noise VCO with a tri-band output, an autocalibration subsystem for low voltage VCO tuning, a very low noise digital Phase Detector (PD), a precision controlled charge pump, a low noise reference path divider and a fractional divider.

The fractional PLL features an advanced delta-sigma modulator design that allows both ultra-fine step sizes and low spurious products. The phase detector (PD) features cycle slip prevention (CSP) technology to allow faster frequency hopping times. Ultra low in-close phase noise and low spurious also allows wider loop bandwidths for faster frequency hopping and low micro-phonics.

For theory of operation and register map refer to the [“PLLs with Integrated VCOs - RF VCOs Operating Guide”](#). To view the Operating Guide, please visit [www.hittite.com](http://www.hittite.com) and choose HMC820LP6CE from the “Search by Part Number” pull down menu.

Note 1: This maximum phase detector frequency can only be achieved if the minimum N value is respected. eg. In the case of fractional feedback mode, the maximum PFD rate =  $f_{vco}/20$  or 100 MHz, whichever is less.

**Evaluation PCB, fo & fo/2 Modes**

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
