

## ADG608/ADG609

### FEATURES

+3 V, +5 V,  $\pm 5$  V Power Supplies  
 $V_{SS}$  to  $V_{DD}$  Analog Signal Range  
 Low On Resistance (30  $\Omega$  max)  
 Fast Switching Times  
 $t_{ON}$  75 ns max  
 $t_{OFF}$  45 ns max  
 Low Power Dissipation (1.5  $\mu$ W max)  
 Break-Before-Make Construction  
 ESD > 5000 V as per Military Standard 3015.7  
 TTL and CMOS Compatible Inputs

### APPLICATIONS

Automatic Test Equipment  
 Data Acquisition Systems  
 Communication Systems  
 Avionics and Military Systems  
 Microprocessor Controlled Analog Systems  
 Medical Instrumentation  
 Battery Powered Instruments  
 Remote Powered Equipment  
 Compatible with  $\pm 5$  V DACs and ADCs such as  
 AD7840/8, AD7870/1/2/4/5/6/8

### GENERAL DESCRIPTION

The ADG608 and ADG609 are monolithic CMOS analog multiplexers comprising eight single channels and four differential channels respectively, fully specified for  $\pm 5$  V, +5 V and +3 V power supplies. The ADG608 switches one of eight inputs to a common output as determined by the 3-bit binary address lines A0, A1 and A2. The ADG609 switches one of four differential inputs to a common differential output as determined by the 2-bit binary address lines A0 and A1. An EN input on both devices is used to enable or disable the device. When disabled, all channels are switched OFF. All the address and enable inputs are TTL compatible over the full specified operating temperature range, making the parts suitable for bus-controlled systems such as data acquisition systems, process controls, avionics and ATEs since the TTL compatible address inputs simplify the digital interface design and reduce the board space requirements.

The ADG608/ADG609 are designed on an enhanced LC<sup>2</sup>MOS process that provides low power dissipation yet gives high switching speed and low on resistance. Each channel conducts equally well in both directions when ON and has an input signal range which extends to the supplies. In the OFF condition, signal levels up to the supplies are blocked. All channels exhibit break-before-make switching action preventing momentary shorting when switching channels. Inherent in the design is low charge injection for minimum transients when switching the digital inputs.

### REV. A

Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use, nor for any infringements of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of Analog Devices.

### FUNCTIONAL BLOCK DIAGRAMS

The ability to operate from single +3 V, +5 V or  $\pm 5$  V bipolar supplies makes the ADG608 and ADG609 perfect for use in battery operated instruments and with the new generation of DACs and ADCs from Analog Devices. The use of 5 V supplies and reduced operating currents gives much lower power dissipation than devices operating from  $\pm 15$  V supplies.

### PRODUCT HIGHLIGHTS

1. Extended Signal Range  
The ADG608/ADG609 are fabricated on an enhanced LC<sup>2</sup>MOS process giving an increased signal range which extends to the supplies.
2. Low Power Dissipation
3. Low  $R_{ON}$
4. Fast Switching Times
5. Break-Before-Make Switching  
Switches are guaranteed break-before-make so that input signals are protected against momentary shorting.
6. Single/Dual Supply Operation

### ORDERING GUIDE

Model	Temperature Range	Package Option*
ADG608BN	-40°C to +85°C	N-16

## NOTES

<sup>1</sup>Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those listed in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Only one absolute maximum rating may be applied at any one time.

<sup>2</sup>Overvoltages at A, S, D or EN will be clamped by internal diodes. Current should be limited to the maximum ratings given.

\* SIMILAR CONNECTION FOR ADG609

Test Circuit 7. Enable Delay,  $t_{ON}(EN)$ ,  $t_{OFF}(EN)$

\* SIMILAR CONNECTION FOR ADG609

Test Circuit 8. Charge Injection

# ADG608/ADG609

Test Circuit 9. OFF Isolation

Test Circuit 10. Channel-to-Channel Crosstalk

## TERMINOLOGY

$V_{DD}$	Most positive power supply potential.
$V_{SS}$	Most negative power supply potential in dual supplies. In single supply applications, it may be connected to ground.
GND	Ground (0 V) reference.
$R_{ON}$	Ohmic resistance between D and S.
$\Delta R_{ON}$	$R_{ON}$ variation due to a change in the analog input voltage with a constant load current.
$R_{ON}$ Match	Difference between the $R_{ON}$ of any two channels.
$I_S$ (OFF)	Source leakage current when the switch is off.
$I_D$ (OFF)	Drain leakage current when the switch is off.
$I_D, I_S$ (ON)	Channel leakage current when the switch is on.
$V_D, V_S$	Analog voltage on terminals D, S.
$C_S$ (OFF)	Channel input capacitance for "OFF" condition.
$C_D$ (OFF)	Channel output capacitance for "OFF" condition.
$C_D, C_S$ (ON)	"ON" switch capacitance.
$C_{IN}$	Digital input capacitance.
$t_{ON}$ (EN)	Delay time between the 50% and 90% points of the digital input and switch "ON" condition.

$t_{OFF}$ (EN)	Delay time between the 50% and 90% points of the digital input and switch "OFF" condition.
$t_{TRANSITION}$	Delay time between the 50% and 90% points of the digital inputs and the switch "ON" condition when switching from one address state to another.
$t_{OPEN}$	"OFF" time measured between the 80% points of both switches when switching from one address state to another.
$V_{INL}$	Maximum input voltage for logic "0."
$V_{INH}$	Minimum input voltage for logic "1."
$I_{INL}$ ( $I_{INH}$ )	Input current of the digital input.
Crosstalk	A measure of unwanted signal which is coupled through from one channel to another as a result of parasitic capacitance.
Off Isolation	A measure of unwanted signal coupling through an "OFF" channel.
Charge Injection	A measure of the glitch impulse transferred from the digital input to the analog output during switching.
$I_{DD}$	Positive supply current.
$I_{SS}$	Negative supply current.

**OUTLINE DIMENSIONS**

Dimensions shown in inches and (mm).

**16-Pin Plastic (N-16)**

**16-Pin SOIC (R-16A)**

**16-Pin TSSOP (RU-16)**

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
