2.5V / 3.3V 1:8 CML Fanout

Multi-Level Inputs w/ Internal Termination

Description

The NB7L1008M is a high performance differential 1:8 Clock/Data fanout buffer. The NB7L1008M produces eight identical output copies of Clock or Data operating up to 6 GHz or 10.7 Gb/s, respectively. As such, the NB7L1008M is ideal for SONET, GigE, Fiber Channel, Backplane and other Clock/Data distribution applications. The differential inputs incorporate internal 50 Ω termination resistors that are accessed through the VT pin. This feature allows the NB7L1008M to accept various logic standards, such as LVPECL, CML, LVDS, LVCMOS or LVTTL logic levels. The V_{REFAC} reference output can be used to rebias capacitor-coupled differential or single-ended input signals. The 1:8 fanout design was optimized for low output skew applications. The NB7L1008M is a member of the GigaComm™ family of high performance clock products.

-	EP	-	The Exposed Pad (EP) on the QFN-24 package bottom is thermally connected to the die for improved heat transfer out of package. The exposed pad must be attached to a heat-sinking conduit. The pad is electrically connected to GND and is recommended to be electrically connected to GND on the PC board.

1. In the differential configuration when the input termination pin (V_T) is connected to a common termination voltage or left open, and if no signal is applied on IN/ $\overline{\text{IN}}$, then the device will be susceptible to self-oscillation. Q_n/ $\overline{\text{Qn}}$ outputs have internal 50 Ω source termination resistors.
2. All V_{CC} and GND pins must be externally connected to the same power supply voltage to guarantee proper device operation.
