

+3.3V, 622Mbps, SDH/SONET 1:4 Deserializer with LVDS Outputs

General Description

The MAX3681 deserializer is ideal for converting 622Mbps serial data to 4-bit-wide, 155Mbps parallel data in ATM and SDH/SONET applications. Operating from a single +3.3V supply, this device accepts PECL serial clock and data inputs, and delivers low-voltage differential-signal (LVDS) clock and data outputs for interfacing with high-speed digital circuitry. It also provides an LVDS synchronization input that enables data realignment and reframing.

The MAX3681 is available in the extended-industrial temperature range (-40°C to +85°C), in a 24-pin SSOP package.

Applications

622Mbps SDH/SONET Transmission Systems
622Mbps ATM/SONET Access Nodes
Add/Drop Multiplexers
Digital Cross Connects

Features

- ◆ Single +3.3V Supply
- ◆ 622Mbps Serial to 155Mbps Parallel Conversion
- ◆ 265mW Power
- ◆ LVDS Data Outputs and Synchronization Inputs
- ◆ Synchronization Input for Data Realignment and Reframing
- ◆ Differential 3.3V PECL Clock and Data Inputs

ABSOLUTE MAXIMUM RATINGS

Terminal Voltage (with respect to GND)

V_{CC} -0.5V to 5V
 PECL Inputs (SD+/-, SCLK+/-) V_{CC} + 0.5V
 LVDS Inputs (SYNC+/-) V_{CC} + 0.5V
 Output Current, LVDS Outputs (PCLK+/-, PD+/-) 10mA

Continuous Power Dissipation (T_A = +85°C)

SSOP (derate 8.00mW/°C above +85°C) 520mW
 Operating Temperature Range -40°C to +85°C
 Storage Temperature Range -65°C to +160°C
 Lead Temperature (soldering, 10sec) +300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Detailed Description

The MAX3681 deserializer uses a 4-bit shift register, 4-bit parallel output register, 2-bit counter, PECL input buffers, and low-voltage differential-signal (LVDS) input/output buffers to convert 622Mbps serial data to 4-bit-wide, 155Mbps parallel data (Figure 1).

The input shift register continuously clocks incoming data on the positive transition of the serial clock (SCLK) input signal. The 2-bit counter generates a parallel output clock (PCLK) by dividing down the serial clock frequency. The PCLK signal is used to clock the parallel output register. During normal operation, the counter divides the SCLK frequency by four, causing the output register to latch every four bits of incoming serial data.

The synchronization inputs (SYNC+, SYNC-) are used for data realignment and reframing. When the SYNC signal is pulsed high for at least two SCLK cycles, the parallel output data is delayed by one SCLK cycle. This realignment is guaranteed to occur within two PCLK cycles of the SYNC signal's positive transition. As a result, the first incoming bit of data during that PCLK cycle is dropped, shifting the alignment between PCLK and data by one bit.

See Figure 2 for the functional timing diagram and Figure 3 for the timing parameters diagram.

Low-Voltage Differential-Signal (LVDS) Inputs and Outputs

The MAX3681 features LVDS inputs and outputs for interfacing with high-speed digital circuitry. The LVDS standard is based on the IEEE 1596.3 LVDS specification. This technology uses 250mVp-p to 400mVp-p, differential low-voltage swings to achieve fast transition times, minimized power dissipation, and noise immunity.

The parallel clock and data LVDS outputs (PCLK+, PCLK-, PD_+, PD_-) require 100Ω differential DC termination between the inverting and noninverting outputs for proper operation. Do not terminate these outputs to ground.

The synchronization LVDS inputs (SYNC+, SYNC-) are internally terminated with 100Ω of differential input resistance, and therefore do not require external termination.

PECL Inputs

The serial data and clock PECL inputs (SD+, SD-, SCLK+, SCLK-) require 50Ω termination to (VCC - 2V) when interfacing with a PECL source (see the *Alternative PECL Input Termination* section).

Applications Information

Alternative PECL Input Termination

Figure 4 shows alternative PECL input-termination methods. Use Thevenin-equivalent termination when a (VCC - 2V) termination voltage is not available. If AC coupling is necessary, such as when interfacing with an ECL-output device, use the ECL AC-coupling termination.

Layout Techniques

For best performance, use good high-frequency layout techniques. Filter voltage supplies and keep ground connections short. Use multiple vias where possible. Also, use controlled impedance transmission lines to interface with the MAX3681 data inputs and outputs.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
