

# MAX14617

## USB Host Charger Identification/Adapter Emulator

### General Description

The MAX14617 is a third-generation USB 2.0 host charger identification device that combines USB Hi-Speed analog switches with a USB adapter emulator circuit.

The device supports pass-through mode and auto mode. In charging downstream port (CDP) pass-through mode, the device emulates the CDP function while supporting normal USB traffic.

The device also supports charging downstream port (CDP) and standard downstream port (SDP) charging during the active state (S0). The MAX14617 also supports dedicated charging port (DCP) charging during the standby state (S3/S4/S5).

The MAX14617 is available in an 8-pin (2mm x 2mm) TDFN package, and is specified over the -40°C to +85°C extended temperature range.

### Applications

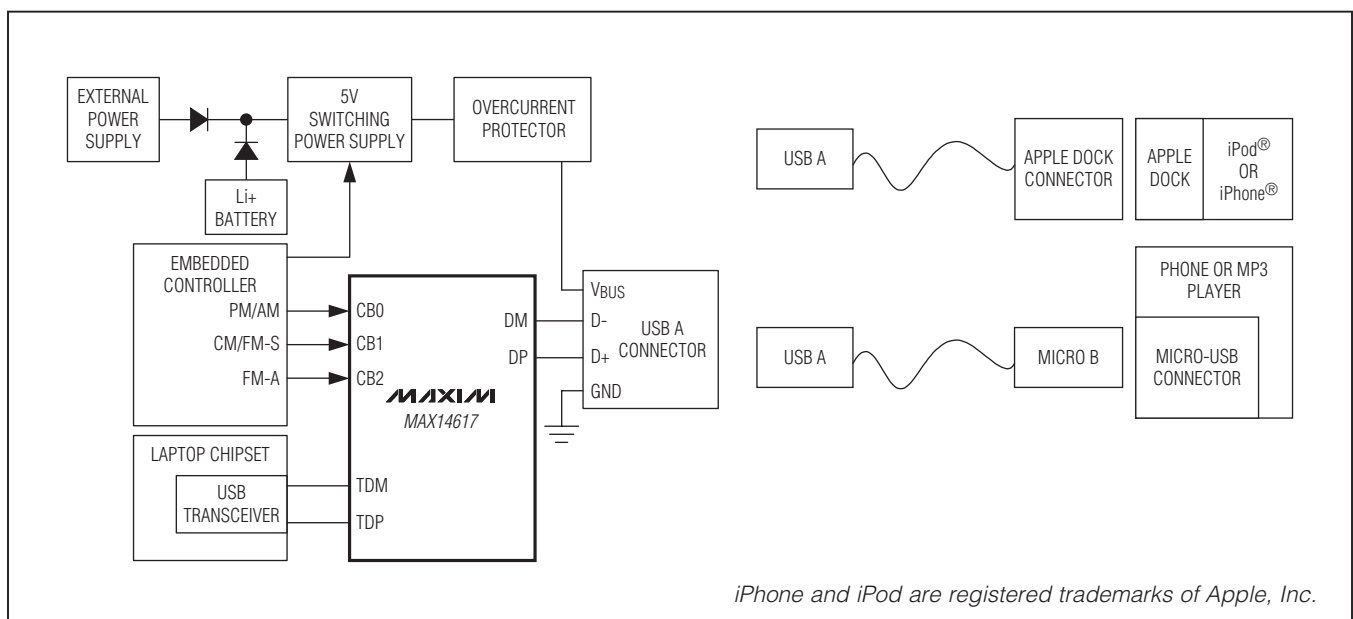

USB Host Data/Chargers Including:	Flat-Panel Displays with USB
Laptop and Desktop Computers	Media Players
USB Hubs	Game Consoles

### Benefits and Features

- ◆ **Improved Charger Interoperability**
  - ◇ USB Charger Downstream Port (CDP) Emulation in S0 State
  - ◇ Meets New USB Battery Charging (BC) Revision 1.2 Specification
  - ◇ Backward Compatible with Previous USB BC Revisions
  - ◇ Meets China YD/T1591-2009 Charging Specification
  - ◇ Supports Standby Mode Charging for Apple BC Revision 1.2-Compatible Devices
- ◆ **Greater User Flexibility**
  - ◇ CB0, CB1, and CB2 Pins Control Multiple Automatic and Manual Charger States
- ◆ **High Level of Integrated Features**
  - ◇ Low-Capacitance USB 2.0 Hi-Speed Switch to Change Charging Modes
  - ◇ Automatic Current-Limit Switch Control
- ◆ **Saves Space on Board**
  - ◇ 2mm x 2mm, 8-Pin TDFN Package

*Ordering Information appears at end of data sheet.*

### Typical Operating Circuit

## USB Host Charger Identification/Adapter Emulator

### ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND.)

V<sub>CC</sub>, TDP, TDM, CB0, CB1, CB2, DP, DM ..... -0.3V to +6.0V  
 Continuous Current into Any Terminal ..... ±30mA  
 Continuous Power Dissipation (T<sub>A</sub> = +70°C)  
 TDFN (derate 11.9mW/°C above +70°C).....953.5mW

Operating Temperature Range ..... -40°C to +85°C  
 Junction Temperature ..... +150°C  
 Storage Temperature Range..... -65°C to +150°C  
 Lead Temperature (soldering, 10s) ..... +300°C  
 Soldering Temperature (reflow) ..... +260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### PACKAGE THERMAL CHARACTERISTICS (Note 1)

TDFN

Junction-to-Ambient Thermal Resistance (θ<sub>JA</sub>) .....84°C/W  
 Junction-to-Case Thermal Resistance (θ<sub>JC</sub>) .....37°C/W

**Note 1:** Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to [www.maxim-ic.com/thermal-tutorial](http://www.maxim-ic.com/thermal-tutorial).

### ELECTRICAL CHARACTERISTICS

(V<sub>CC</sub> = 3.0V to 5.5V, T<sub>A</sub> = T<sub>MIN</sub> to T<sub>MAX</sub>, unless otherwise noted. Typical values are at V<sub>CC</sub> = 5.0V, T<sub>A</sub> = +25°C.) (Note 2)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
<b>POWER SUPPLY</b>						
Power-Supply Range	V <sub>CC</sub>	V <sub>CB0</sub> > V <sub>IH</sub>	3.0		5.5	V
		V <sub>CB0</sub> = 0V (Note 3)	4.75		5.25	
Supply Current	I <sub>CC</sub>	V <sub>CB0</sub> = V <sub>CB1</sub> = V <sub>CC</sub> = 5.25V, V <sub>CB2</sub> = 0V, CM mode		50	100	μA

$V_{LGC}$ Voltage	$V_{LGC}$		0.8		2.0	V
$I_{DP\_SINK}$ Current	$I_{DP\_SINK}$	$V_{DP} = 0.15V$ to $3.6V$	50		150	$\mu A$
<b>LOGIC INPUTS (CB0, CB1, CB2)</b>						
CB0/CB1/CB2 Input Logic-High	$V_{IH}$		1.4			V
CB0/CB1/CB2 Input Logic-Low	$V_{IL}$				0.4	V
CB0/CB1/CB2 Input Leakage Current	$I_{IN}$	$V_{CC} = 5.5V$ , $0V \leq V_{IN} \leq V_{IL}$ or $V_{IH} \leq V_{IN} \leq V_{CC}$	-1		+1	$\mu A$
<b>ESD PROTECTION</b>						
ESD Protection Level	$V_{ESD}$	HBM		$\pm 2$		kV

**Note 2:** All units are 100% production tested at  $T_A = +25^\circ C$ . Specifications over temperature are guaranteed by design.

**Note 3:** The device is operational from  $3.0V$  to  $5.5V$ . However, to have the valid Apple resistor-divider network, the  $V_{CC}$  supply must stay within  $4.75V$  to  $5.25V$ .

**Note 4:** Guaranteed by design.

**Note 5:** Does not include delay by state machine.

### Pin Configuration

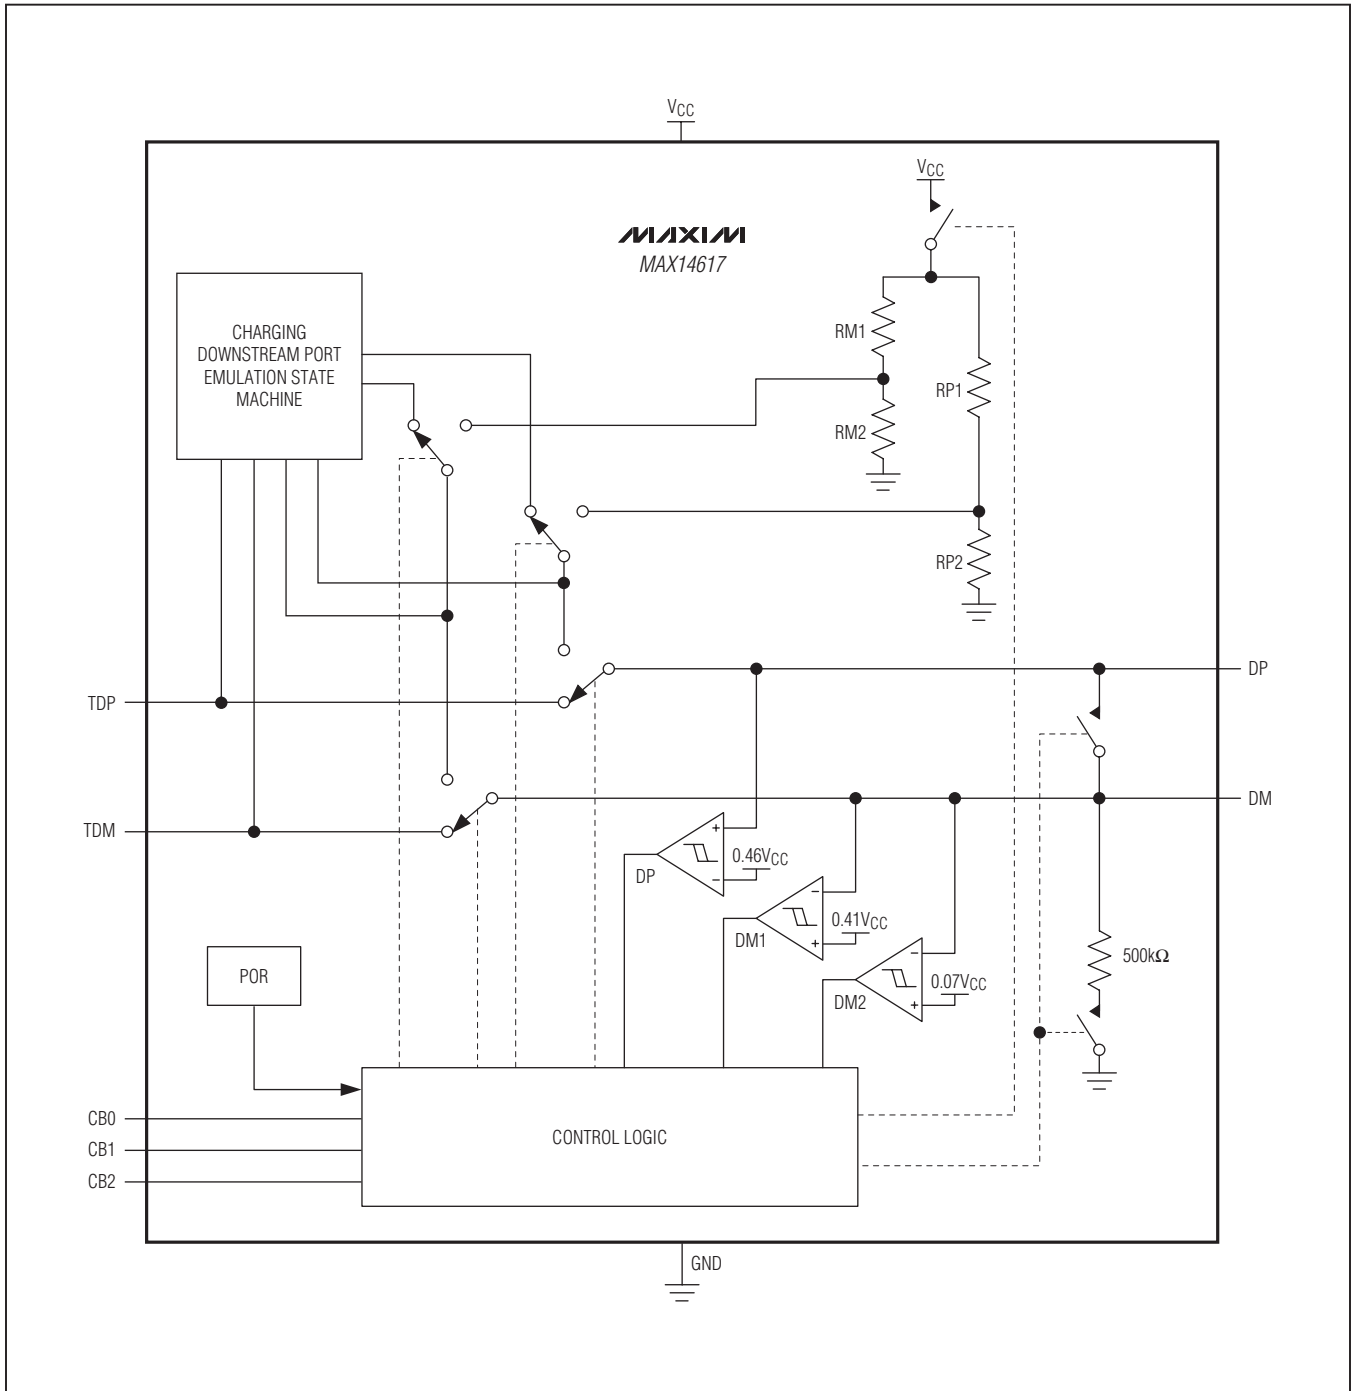

### Pin Description

PIN	NAME	FUNCTION
1	CB2	Switch Control Bit. See Table 1.
2	DM	USB Connector D- Connection
3	DP	USB Connector D+ Connection
4	CB1	Switch Control Bit. See Table 1.
5	V <sub>CC</sub>	Power Supply. Connect a 0.1μF capacitor between V <sub>CC</sub> and ground as close as possible to the device.
6	TDP	Host USB Transceiver D+ Connection
7	TDM	Host USB Transceiver D- Connection
8	CB0	Switch Control Bit. See Table 1.
—	EP	Exposed Pad. Connect EP to ground. For enhanced thermal dissipation, connect EP to a copper area as large as possible.

## USB Host Charger Identification/Adapter Emulator

### Functional Diagram

## USB Host Charger Identification/Adapter Emulator

### Detailed Description

The MAX14617 adapter emulator has Hi-Speed USB analog switches that support USB hosts to identify the USB port as a charger port when the USB host is in a low-power mode and cannot enumerate USB devices. These Hi-Speed USB switches feature low 4pF (typ) on-capacitance and low 4Ω (typ) on-resistance. DP and DM can handle signals between 0V and 6V with any supply voltage.

### Resistor-Dividers

The MAX14617 features an internal resistor-divider for biasing data lines to provide support for Apple-compliant devices. When the MAX14617 is not operated with the resistor-divider, the device disconnects the resistor-dividers from the supply voltage to minimize supply current requirements. The resistor-dividers are not connected in pass-through mode.

### Switch Control

The MAX14617 features three digital inputs for mode selection: CB0, CB1, and CB2. Connect CB0, CB1, and CB2 to a logic-level low voltage for autodetection charger mode (AM). Change only CB1 to a logic-level high for forced dedicated charger mode (FM-S). Change

only CB0 to a logic-level low for normal high-speed pass-through mode (PM). Connect only CB2 to a logic-level low for high-speed pass-through mode with CDP emulation (CM). Connect CB2 to a logic-level high for forced Apple 2A charger mode. See [Table 1](#).

### Autodetection

The MAX14617 features autodetection charger mode for dedicated chargers and USB masters. Switch control pins CB0, CB1, and CB2 must be set low to activate autodetection charger mode.

In autodetection charger mode, the device monitors the voltages at DM and DP to determine the type of device attached. If the voltage at DM is 2.05V (typ) or higher and the voltage at DP is 2.3V (typ) or lower, the voltage stays unchanged. If the voltage at DM is forced below the 2.05V (typ) threshold, the internal switch disconnects DM and DP from the resistor-divider and DP and DM are shorted together for dedicated charging mode. Also, if the voltage at DP is forced higher than the 2.3V (typ) threshold, the internal switch disconnects DM and DP from the resistor-divider and DP and DM are shorted together for dedicated charging mode.

Once the charging voltage is removed, the short between DP and DM is disconnected for normal operation.

**Table 1. Digital Input State**

CB0	CB1	CB2	CHARGER/USB	MODE	STATUS
X	X	1	Charger	FM-A	Force Apple 2A Charger Mode: Apple 2A resistor-dividers
0	0	0	Charger	AM	Autodetection Charger Mode
0	1	0	Charger	FM-S	Force Dedicated Charger Mode: DP/DM
1	0	0	USB	PM	USB Pass-Through Mode. Connect DP/DM to TDP/TDM.
1	1	0	USB	CM	USB Pass-Through Mode with CDP Emulation. Auto connect DP/DM to TDP/TDM depending on CDP status.

## USB Host Charger Identification/Adapter Emulator

**Table 2. Different Power States**

STATE	DESCRIPTION
S0	System on.
S1	Power to the CPU(s) and RAM is maintained; devices that do not indicate they must remain on can be powered down.
S2	CPU is powered off.
S3	Standby (suspend to RAM). System memory context is maintained, and all other system context is lost.
S4	Hibernate. Platform context is maintained.
S5	Soft off.

### USB Pass-Through Mode with CDP Emulation

The MAX14617 features a pass-through mode with CDP emulation. This is to support the higher charging current capability during the pass-through mode in normal USB operation (S0 state). The peripheral device equipped with CDP detection capability could draw a charging current as defined in USB Battery Charger Specification 1.2 when the charging host supports the CDP mode. This is a useful feature since most host USB transceivers do not have the CDP function. [Table 2](#) shows the different power states of S0–S5.

### Data Contact Detect

The MAX14617 supports USB devices that require detecting the USB data lines prior to charging. When a USB Revision 1.2-compliant device is attached, the USB data lines DP and DM are shorted together. The short remains until it is detected by the USB device. This feature guarantees appropriate charger detection if a USB Revision 1.2-compliant device is attached. The autodetection charger mode is activated after the data contact detect is established. CB0, CB1, and CB2 must be set low to activate data contact detect support.

### ESD Test Conditions

ESD performance depends on a variety of conditions. Contact Maxim for a reliability report that documents test methodology and results.

### Ordering Information

PART	TEMP RANGE	PACKAGE TYPE
MAX14617ETA+T	-40°C to +85°C	8 TDFN-EP*

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
