

LC06511DMX, LC06511FMX, LC06514DMX

Battery Protection IC, OTP Function, 1-Cell Lithium-Ion Battery

Overview

LC06511DMX/LC06514DMX is a protection IC for 1 cell lithium-ion or lithium-polymer battery with built-in OTP. It provides highly accurate adjustable over-charge, over-discharge, over-current protection with adjustable detection delay by OTP. Current is detected by high precision external chip resistor. Which realizes accurate current detection over temperature.

Function

- Highly Accurate Detection Voltage/Current at Ta = 25°C, VCC = 3.8 V
- Over Charge Detection Voltage
 - ◆ 4.1 V to 4.55 V (5 mV step)
- Over Charge Release Hysteresis
 - ◆ 0 V to 0.2 V (0 V, 0.1 V, 0.15 V, 0.2 V)
- Over Discharge Detection Voltage
 - ◆ 2.0 V to 3.3 V (50 mV step)
- Over Discharge Release Hysteresis2
 - ◆ 0 V, 0.2 V, 0.3 V, 0.4 V
- Discharge Over Current Detection Voltage1
 - ◆ 3 mV to 70 mV (1 mV step)
- Discharge Over Current Detection Voltage2
 - ◆ 3 mV to 70 mV (1 mV step)
- Short Current Detection Voltage
 - ◆ 50 mV to 150 mV (10 mV step)
- Charge Over Current Detection Voltage
 - ◆ -70 mV to -3 mV (-1 mV step)
- Over-discharge Detection Delay Time
 - ◆ 32 ms, 64 ms, 128 ms, 256 ms
- Discharge Over-current Detection Delay Time1
 - ◆ 8 ms, 16 ms, 2048 ms, 3482 ms
- 0 V Battery Charging
 - ◆ “Permit (LC06511DMX)”, “Inhibit (LC06514DMX)”
- Auto Wake-up Function Battery Charging “Permit”
- This is a Pb-Free Device

Typical Applications

- Smart Phone
- Tablet
- Wearable Device

Table 1. ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage	VCC		-0.3 to 12.0	V
CS terminal Input voltage	VCS		-0.3 to 7	V
VM terminal Input voltage	VVM		VCC-24.0 to VCC+0.3	V
CO terminal voltage	VCO		VCC-24.0 to VCC+0.3	V
DO terminal voltage	VDO		VCC-0.3 to VCC+0.3	V
Storage temperature	Tstg		-55 to +125	°C
Operating ambient temperature	Topr		-40 to +85	°C
Junction temperature	Tj		125	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

BLOCK DIAGRAM

Figure 3. Block Diagram

DESCRIPTION OF OPERATION

- The battery voltage is detected between VCC pin and VSS pin and the battery current is detected between VSS pin and CS pin.

1. Normal state

- “VCC voltage” is between “over-discharge detection voltage (Vuv)”, “over-charge detection voltage (Vov)”, and “CS voltage” is between “charge over-current detection voltage (Vcoc)”, “discharge over-current detection voltage (Vdoc)”, and “VM voltage” is lower than “dicharge over-current (short) release voltage (Vdocr)”.

This is the normal state. Both CO and DO are high level output. Charge and discharge is allowed.

2. Over-charging state

- “VCC voltage” is higher than or equal to “over-charge detection voltage (Vov)” for longer than “over-charge detection delay time (Tov)”.

This is the over-charging state, CO is low level output. Charge is prohibited.

- **Release from over-charging state 1**

“VM voltage” is lower than “charge over-current (short) release voltage (Vcocr)”. Then “VCC voltage” is lower than “over-charge release voltage (Vovr)” for longer than “over-charging release delay time (Tovr)”.

- **Release from over-charging state 2**

“VM voltage” is higher than “charge over-current (short) release voltage (Vcocr)”. Then “VCC voltage” is lower than “over-charge detection voltage (Vov)” for longer than “over-charge release delay time (Tovr)”.

3. Over-discharging state

- “VCC voltage” is lower than “over-discharge detection voltage (Vuv)” for longer than “over-discharge delay time (Tuv)”.

This is the over-discharging state, DO is low level output. Discharge is prohibited.

During over-discharging state, VM pin is pulled up to Vcc by internal resistor (Rvmu) and circuits are shut down. The low power consumption is kept.

- **Release from Over-discharging state 1**

Charger is connected, then “VCC voltage” goes higher than “over-discharge release voltage1 (Vuvr1)” for longer than “over-charge release delay time (Tuvr)”.

- **Release from over-discharging state (with auto wake-up feature) 2**

“VCC voltage” is higher than “over-discharge release voltage2 (Vuvr1)” without charger for longer than “over-charge release delay time (Tovr)”.

4. Discharging over-current state

- **Discharge over-current detection 1**

CS terminal is higher than or equal to “discharge over-current detection voltage (Vdoc1)” for longer than “discharge over-current detection delay time (Tdoc1)”. DO is low level output. Discharge is prohibited.

- **Discharge over-current detection 2**

CS terminal is higher than or equal to “discharge over-current detection voltage2 (Vdoc2)” for longer than “discharge over-current detection delay time 2 (Tdoc2)”.

DO is low level output. Discharge is prohibited.

- **Discharge over-current detection (Short circuit)**

CS terminal is higher than or equal to “discharge over-current detection voltage (Short circuit) (Vshrt)” for longer than “short-current detection delay time (Tshrt)”.

DO is low level output. Discharge is prohibited.

During discharging over-current state, VM pin is pulled down to Vss by internal resistor (Rvmd).

- **Release from discharging over-current state**

“CS voltage” goes lower than “discharge over-current detection voltage (Vdoc1)” and VM voltage goes lower than “discharge over-current (short) release voltage (Vdocr)” for longer than “discharge over-current release delay time (Tdocr)”.

5. Charging over-current state

- “CS voltage” goes lower than or equal to “charge over-current detection voltage (Vcoc) for longer than “charge over-current detection delay time (Tcoc)”.

This is the charging over-current state, CO is low level output. Charge is prohibited.

- **Release from charging over-current state**

“CS voltage” goes higher than “charge over-current detection voltage (Vcoc)” and “VM voltage” goes higher than “charge over-current release voltage (Vcocr)” for longer than “charge over-current release delay time (Tcocr)”.

6. 0 V battery charging (LC06511DMX)

- When the Battery voltage is lower than or equal to “0V battery charge permission voltage (Vchg)”, charge is allowed if charger voltage is higher than or equal “0V battery charge permission voltage (Vchg)”. CO is fixed by the “VCC voltage”.

7. 0 V Battery Protection Function (LC06514DMX)

- This function protects the battery when a short circuit in the battery (0 V battery) is detected, at which point charging will be prohibited. When the voltage of a battery is below “0 V battery charging inhibition battery voltage (Vinh)”, CO is low level output. Charge is prohibited.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).

Телефон: 8 (812) 309-75-97 (многоканальный)
