## OPERATING LIMITS

The maximum current rating of the CMA1303 depends on the case temperature ( $T_c$ ) when the LED has reached thermal equilibrium under steady-state operation. The graph shown below assumes that the system design employs good thermal management (thermal interface material and heat sink) and may vary when poor thermal management is employed. Either solder pad shown in the Mechanical Dimensions section on page 26 can be used as the  $T_c$  measurement point.

Another important factor in good thermal management is the temperature of the Light Emitting Surface (LES). Cree recommends a maximum LES temperature of 140 °C to ensure optimal LED lifetime. Please refer to the Thermal Design section on page 27 for more information on LES temperature measurement.

### Notes

- Cree maintains a tolerance of  $\pm 7\%$  on flux and power measurements,  $\pm 0.005$  on chromaticity (CCx, CCy) measurements and a tolerance of  $\pm 2$  on CRI measurements. See the Measurements section (page 29).
- For 80 CRI minimum LEDs, CRI R9 minimum is 0 with a  $\pm 2$  tolerance. For 90 CRI minimum LEDs, CRI R9 typical is 60.

## RELATIVE LUMINOUS FLUX

The relative luminous flux values provided below are the ratio of:

- Measurements of CMA1303 at steady-state operation at the given conditions, divided by
- Flux measured during binning, which is a pulsed measurement at 700 mA at  $T_j = 85^\circ\text{C}$  for the 9-V CMA1303 LED.

Using the 9-V CMA1303 LED as an example, at steady-state operation of  $T_c = 25^\circ\text{C}$ ,  $I_F = 900\text{ mA}$ , the relative luminous flux ratio is 140% in the chart below. A 9-V CMA1303 LED that measures 860 lm during binning will deliver 1204 lm ( $860 \times 1.4$ ) at steady-state operation of  $T_c = 25^\circ\text{C}$ ,  $I_F = 900\text{ mA}$ .

Using the 18-V CMA1303 LED as an example, at steady-state operation of  $T_c = 25^\circ\text{C}$ ,  $I_F = 450\text{ mA}$ , the relative luminous flux ratio is 140% in the chart below. An 18-V CMA1303 LED that measures 860 lm during binning will deliver 1204 lm ( $860 \times 1.4$ ) at steady-state operation of  $T_c = 25^\circ\text{C}$ ,  $I_F = 450\text{ mA}$ .

- Flux measured during binning, which is a pulsed measurement at 175 mA at  $T_j = 85^\circ\text{C}$  for the 36-V CMA1303 LED.

Using the 36-V CMA1303 LED as an example, at steady-state operation of  $T_c = 25^\circ\text{C}$ ,  $I_f = 225\text{ mA}$ , the relative luminous flux ratio is 140% in the chart below. A 36-V CMA1303 LED that measures 860 lm during binning will deliver 1204 lm ( $860 \times 1.43$ ) at steady-state operation of  $T_c = 25^\circ\text{C}$ ,  $I_f = 225\text{ mA}$ .

## THERMAL DESIGN

The CMA family of LED arrays can include over a hundred different LED die inside one package, and thus over a hundred different junction temperatures ( $T_j$ ). Cree has intentionally removed junction-temperature-based operating limits and replaced the commonplace maximum  $T_j$  calculations with maximum ratings based on forward current ( $I_f$ ) and case temperature ( $T_c$ ). No additional calculations are required to ensure that the CMA LED is being operated within its designed limits. LES temperature measurement provides additional verification of good thermal design. Please refer to page 4 for the Operating Limit specifications.

There is no need to calculate for  $T_j$  inside the package, as the thermal management design process, specifically from solder point ( $T_{sp}$ ) to ambient ( $T_a$ ), remains identical to any other LED component. For more information on thermal management of Cree XLamp LEDs, please refer to the [Thermal Management application note](#). For CMA soldering recommendations and information on thermal interface materials (TIM), LES temperature measurement, and connection methods, please refer to the [Cree XLamp CM Family LEDs soldering and handling document](#).

To keep the CMA1303 LED at or below the maximum rated  $T_c$ , the case to ambient temperature thermal resistance ( $R_{c-a}$ ) must be at or below the maximum  $R_{c-a}$  value shown on the following graphs, depending on the operating environment. The y-axis in each graph is a base 10 logarithmic scale.

As the figure at right shows, the  $R_{c-a}$  value is the sum of the thermal resistance of the TIM ( $R_{tim}$ ) plus the thermal resistance of the heat sink ( $R_{hs}$ ).

### Measurements

The luminous flux, radiant power, chromaticity, forward voltage and CRI measurements in this document are binning specifications only and solely represent product measurements as of the date of shipment. These measurements will change over time based on a number of factors that are not within Cree's control and are not intended or provided as operational specifications for the products. Calculated values are provided for informational purposes only and are not intended or provided as specifications.

### Pre-Release Qualification Testing

Please read the [LED Reliability Overview](#) for details of the qualification process Cree applies to ensure long-term reliability for XLamp LEDs and details of Cree's pre-release qualification testing for XLamp LEDs. Cree did not perform Room Temperature Operating Life (RTOL) testing on the CMA1303 LED.

### Lumen Maintenance

Cree now uses standardized IES LM-80-08 and TM-21-11 methods for collecting long-term data and extrapolating LED lumen maintenance. For information on the specific LM-80 data sets available for this LED, refer to the public [LM-80 results document](#).

Please read the [Long-Term Lumen Maintenance application note](#) for more details on Cree's lumen maintenance testing and forecasting. Please read the [Thermal Management application note](#) for details on how thermal design, ambient temperature, and drive current affect the LED junction temperature.

### RoHS Compliance

The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as implemented January 2, 2013. RoHS Declarations for this product can be obtained from your Cree representative or from the [Product Ecology](#) section of the Cree website.

### Vision Advisory

WARNING: Do not look at an exposed lamp in operation. Eye injury can result. For more information about LEDs and eye safety, please refer to the [LED Eye Safety application note](#).
