

## 36 V Input Voltage Detector

No. EA-230-190405

### OUTLINE

The R3150N is a voltage detector that provides high-voltage resistance, high voltage accuracy and low supply current. This device is suitable for battery voltage supervisor. The R3150NxxxA/B provide  $V_{DD}$  pin detection and the R3150NxxxE/F provide SENSE pin detection. Detector threshold and Release voltage can be specified separately. Both the detector threshold accuracy and the release voltage accuracy are  $\pm 1.5\%$  ( $25^{\circ}\text{C}$ ) (Detector Threshold Hysteresis is 5% to 20%).

The detect output delay time and the release output delay time (Power-on Reset Time) are adjustable by using external capacitors. The output types are Nch open drain "L" output and Nch open drain "H" output.

The R3150N is available in SOT-23-6 package that is possible to achieve high-density mounting on boards.

### FEATURES

- Operating Voltage Range (Maximum Rating) ..... R3150NxxxA/B: 1.4 V to 36.0 V (50.0 V)  
R3150NxxxE/F: 3.6 V to 6.0 V (7.0 V)
- Operating Temperature Range .....  $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$
- Supply Current ..... R3150NxxxA/B: Typ.  $3.8\ \mu\text{A}$   
R3150NxxxE/F: Typ.  $3.5\ \mu\text{A}$
- Detector Threshold Range ..... 5.0 V to 10.0 V (0.1 V step)
- Detector Threshold Accuracy .....  $\pm 1.5\%$  ( $25^{\circ}\text{C}$ )  
 $\pm 2.0\%$  ( $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$ )
- Release Voltage Range<sup>(1)</sup> ..... 5.3V to 11.0V (0.1V steps)
- Release Voltage Accuracy .....  $\pm 1.5\%$  ( $25^{\circ}\text{C}$ )  
 $\pm 2.0\%$  ( $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$ )
- Detect Output Delay Time Accuracy .....  $-35\%$  to  $40\%$  ( $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$ )
- Release Output Delay Time Accuracy .....  $-35\%$  to  $40\%$  ( $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$ )
- Output Type ..... Nch Open Drain
- Package ..... SOT-23-6

Detect Output Delay Time and Release Output Delay Time are adjustable by external capacitor.

### APPLICATIONS

- Voltage monitoring for laptops, digital TVs, cordless phones, and private LAN systems for home.

<sup>(1)</sup> The release voltage can be adjusted by having the hysteresis set to 5% to 20% of the detector threshold.

**SELECTION GUIDE**

The detector threshold, release voltage, and output type for the ICs are user-selectable options.

**Selection Guide**

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R3150Nxxx*-TR-FE	SOT-23-6	3,000 pcs	Yes	Yes

xxx: Specify a combination of Set Detector Threshold ( $-V_{SET}$ ) and Set Release Voltage ( $+V_{SET}$ ) by using serial numbers starting from 001.

$-V_{SET}$  can be designated between 5.0 V and 10.0 V in 0.1 V step.

$+V_{SET}$  can be designated between 5.3 V and 11.0 V in 0.1 V step.

\*: Select an output type from below.

A:  $V_{DD}$  Voltage Detection Type "L" Output

B:  $V_{DD}$  Voltage Detection Type "H" Output

E: SENSE Voltage Detection Type "L" Output

F: SENSE Voltage Detection Type "H" Output

### ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause permanent damage and may degrade the lifetime and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

## RECOMMENDED OPERATING CONDITIONS

### Recommended Operating Conditions

Symbol	Parameter		Rating	Unit
V <sub>DD</sub>	Operating Voltage	R3150NxxxA/B	1.4 to 36.0	V
		R3150NxxxE/F	3.6 to 6.0	V
V <sub>SENSE</sub>	SENSE Input Voltage	R3150NxxxE/F	0 to 36.0	V
T <sub>a</sub>	Operating Temperature Range		-40 to 105	°C

### RECOMMENDED OPERATING CONDITIONS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

1. The output voltage is equalized to the pull-up voltage.
2. The V<sub>DD</sub> voltage drops to the detector threshold (A point) which means  $V_{ref} \geq V_{DD} \times (R_b + R_c) / (R_a + R_b + R_c)$ , and the comparator output shifts from “L” to “H” voltage, and the output pin voltage shifts from the pull-up voltage to “L” voltage.
3. If the V<sub>DD</sub> voltage is lower than the minimum operating voltage, the output voltage becomes unstable.
4. The output pin voltage becomes “L” voltage.
5. The V<sub>DD</sub> voltage becomes higher than the release voltage (B point) which means  $V_{ref} \leq V_{DD} \times R_b / (R_a + R_b)$ , and the comparator output shifts from “H” to “L” voltage, and the output pin voltage is equalized to the pull-up voltage.

**DETECT OUTPUT DELAY TIME (treset)**

Detect Output Delay Time (treset) is defined as follows:

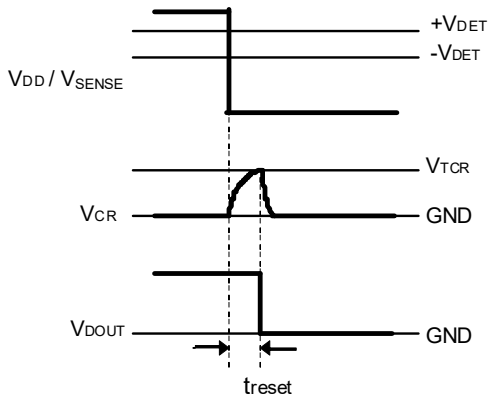

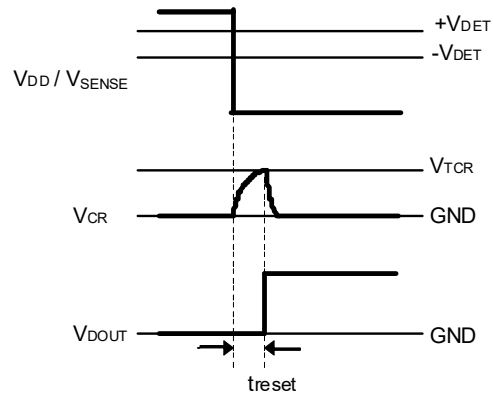

treset starts after the output pin (D<sub>OUT</sub>) is pulled up to 5 V with a 100 kΩ resistor and the V<sub>DD</sub>/V<sub>SENSE</sub> is shifted from “-V<sub>SET</sub> + 1.0 V” to “-V<sub>SET</sub> - 1.0 V”. treset ends when the output voltage reaches to 2.5 V.

**R3150NxxxA/E****R3150NxxxB/F**

treset is calculated by the following equation:

$$t_{\text{reset}} (\text{s}) = C_R \times 10^7$$

With the R3150NxxxA/B, if the V<sub>DD</sub> voltage after detection is 3.6 V or less, the normal detect output delay time cannot be expected due to insufficient voltage (The detect output delay time decreases along with the decrease of V<sub>DD</sub> voltage).

**DETECT OUTPUT DELAY****R3150NxxxA/E****R3150NxxxB/F**

If the voltage lower than the detector threshold is applied to  $V_{DD}/SENSE$  pin while the voltage higher than the release voltage is applied to the  $V_{DD}/SENSE$  pin, the external capacitor starts to charge electricity and the  $C_R$  pin voltage starts to increase.

Until the  $C_R$  pin voltage reaches to the detector threshold of the detect output delay pin ( $V_{TCR}$ ), the output voltage maintains the release output. If the  $C_R$  pin voltage becomes higher than  $V_{TCR}$ , the output voltage shifts from the release output to the detection output.

In addition, if the output voltage shift from the release output to the detection output, the external capacitor starts to discharge electricity and the  $C_R$  pin voltage starts decrease.

**RELEASE OUTPUT DELAY TIME ( $t_{\text{delay}}$ )**

Release Output Delay Time ( $t_{\text{delay}}$ ) is defined as follows:

$t_{\text{delay}}$  starts after the output pin ( $D_{\text{OUT}}$ ) is pulled up to 5 V with a 100 k $\Omega$  resistor, and the  $V_{\text{DD}}/V_{\text{SENSE}}$  is shifted from “+ $V_{\text{SET}} - 1.0$  V” to “+ $V_{\text{SET}} + 1.0$  V”. It ends when the output voltage reaches to 2.5 V.

**R3150NxxxA/E****R3150NxxxB/F**

$t_{\text{delay}}$  is calculated by the following equation:

$$t_{\text{delay}} (\text{s}) = C_{\text{D}} \times 10^7$$

## RELEASE OUTPUT DELAY

R3150NxxxA/E

R3150NxxxB/F

If the voltage higher than the release voltage is applied to the  $V_{DD}/V_{SENSE}$  pin while the voltage lower than the detector threshold is applied to  $V_{DD}/V_{SENSE}$  pin, the external capacitor starts to charge electricity and the  $C_D$  pin voltage starts to increase.

Until the  $C_D$  pin voltage reaches to the release voltage of the release output delay pin ( $V_{TCD}$ ), the output voltage maintains the release output. If the  $C_D$  pin voltage becomes higher than the release voltage of the release output delay pin, the output voltage shifts from the detection output to the release output.

In addition, if the output voltage shifts from the detection output to the release output, the external capacitor starts to discharge electricity and the  $C_D$  pin voltage starts to decrease.

**START-UP AND SHUTDOWN SEQUENCES**

The R3150NxxxE/F (SENSE Voltage Detection Type) supervise the SENSE pin voltage while the voltage higher than the minimum operating voltage is applied to  $V_{DD}$  pin.

At start-up, either the  $V_{DD}$  pin or SENSE pin can be started up first, however, if the  $V_{DD}$  pin is started up with a voltage lower than the minimum operating voltage while the SENSE pin has already been started up, the start-up slope angle of the  $V_{DD}$  pin should be 10 V/ ms or less.

At shutdown, the SENSE pin should be shut down first, then after treset, the  $V_{DD}$  pin should be shut down.

**DETECTOR OPERATION VS. GLITCH INPUT VOLTAGE**

The R3150N has built-in rejection of fast transients on the  $V_{DD}$  (R3150NxxxA/B) or SENSE (R3150NxxxE/F) pins. The rejection of transients depends on both the pulse width and the overdrive voltage, as shown in Figure 1. The R3150N does not respond to transients that are short pulse width / large overdrive voltage or long pulse width / small overdrive voltage. Any combination of pulse width and overdrive voltage above the curve generates a reset signal.

The overdrive voltage indicates between the minimum value of input voltage ( $V_{DD}$  or  $V_{SENSE}$ ) and  $-V_{DET}$ , as shown in Figure 2.

**Figure 1. Minimum Pulse Width at  $V_{DD}$ /SENSE vs. Overdrive Voltage**

**RELEASE OPERATION VS. GLITCH INPUT VOLTAGE**

The R3150N has built-in rejection of fast transients on the  $V_{DD}$  (R3150NxxxA/B) or SENSE (R3150NxxxE/F) pins. The rejection of transients depends on both the pulse width and the overdrive voltage, as shown in Figure 3. The R3150N does not respond to transients that are short pulse width/large overdrive voltage or long pulse width/small overdrive voltage. Any combination of pulse width and overdrive voltage above the curve generates a reset signal. The overdrive voltage indicates between the maximum value of input voltage ( $V_{DD}$  or  $V_{SENSE}$ ) and  $+V_{DET}$ , as shown in Figure 4.

## TECHNICAL NOTES

### When connecting resistors to the device's input pin

When connecting a resistor (R1) to an input of this device, the input voltage decreases by [Device's Consumption Current] x [Resistance Value] only. And, the cross conduction current<sup>(1)</sup>, which occurs when changing from the detecting state to the release state, is decreased the input voltage by [Cross Conduction Current] x [Resistance Value] only. And then, this device will enter the re-detecting state if the input voltage reduction is larger than the difference between the detector voltage and the released voltage.

When the input resistance value is large and the  $V_{DD}$  is gone up at mildly in the vicinity of the released voltage, repeating the above operation may result in the occurrence of output.

As shown in Figure A/B, set R1 to become 100 k $\Omega$  or less as a guide, and connect  $C_{IN}$  of 0.1  $\mu$ F and more to between the input pin and GND. Besides, make evaluations including temperature properties under the actual usage condition, with using the evaluation board like this way. As result, make sure that the cross conduction current has no problem.

<sup>(1)</sup> In the CMOS output type, a charging current for OUT pin is included.

<sup>(2)</sup> Note the bias dependence of capacitors.

**Prohibited Area of Supply Voltage Fluctuations ( $V_{DD}$  Voltage Detection Type)**

As for the steep change of the supply voltages in the prohibited area as shown in Figure C, the detector may cause a false detection if the supply voltage is over the detector threshold, as shown in Figure D. In addition, the detector may take an incorrect detect output delay time if the supply voltage is less than  $-V_{DET}$ , as shown in Figure E.

The power dissipation of the package is dependent on PCB material, layout, and environmental conditions. The following measurement conditions are based on JEDEC STD. 51-7.

**Measurement Conditions**

Item	Measurement Conditions
Environment	Mounting on Board (Wind Velocity = 0 m/s)
Board Material	Glass Cloth Epoxy Plastic (Four-Layer Board)
Board Dimensions	76.2 mm × 114.3 mm × 0.8 mm
Copper Ratio	Outer Layer (First Layer): Less than 95% of 50 mm Square Inner Layers (Second and Third Layers): Approx. 100% of 50 mm Square Outer Layer (Fourth Layer): Approx. 100% of 50 mm Square
Through-holes	φ 0.3 mm × 7 pcs

**Measurement Result**

(Ta = 25°C, Tjmax = 125°C)

Item	Measurement Result
Power Dissipation	660 mW
Thermal Resistance (θja)	θja = 150°C/W
Thermal Characterization Parameter (ψjt)	ψjt = 51°C/W

θja: Junction-to-Ambient Thermal Resistance

ψjt: Junction-to-Top Thermal Characterization Parameter

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact Ricoh sales or our distributor before attempting to use AOI.
11. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

**Ricoh is committed to reducing the environmental loading materials in electrical devices with a view to contributing to the protection of human health and the environment.**

Ricoh has been providing RoHS compliant products since April 1, 2006 and Halogen-free products since April 1, 2012.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
