

# SC70/ $\mu$ DFN, Single/Dual Low-Voltage, Low-Power $\mu$ P Reset Circuits

MAX6381-MAX6390

## General Description

The MAX6381-MAX6390 microprocessor ( $\mu$ P) supervisory circuits monitor power-supply voltages from +1.8V to +5.0V while consuming only 3 $\mu$ A of supply current at +1.8V. Whenever V<sub>CC</sub> falls below the factory-set reset thresholds, the reset output asserts and remains asserted for a minimum reset timeout period after V<sub>CC</sub> rises above the reset threshold. Reset thresholds are available from +1.58V to +4.63V, in approximately 100mV increments. Seven minimum reset timeout delays ranging from 1ms to 1200ms are available.

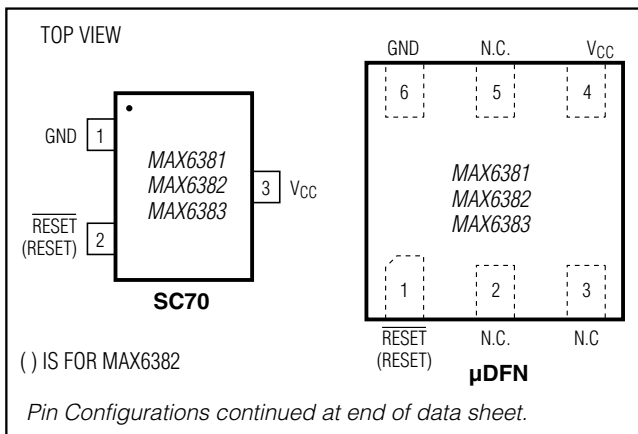

The MAX6381/MAX6384/MAX6387 have a push-pull active-low reset output. The MAX6382/MAX6385/MAX6388 have a push-pull active-high reset output, and the MAX6383/MAX6386/MAX6389/MAX6390 have an open-drain active-low reset output. The MAX6384/MAX6385/MAX6386 also feature a debounced manual reset input (with internal pullup resistor). The MAX6387/MAX6388/MAX6389 have an auxiliary input for monitoring a second voltage. The MAX6390 offers a manual reset input with a longer V<sub>CC</sub> reset timeout period (1120ms or 1200ms) and a shorter manual reset timeout (140ms or 150ms).

The MAX6381/MAX6382/MAX6383 are available in 3-pin SC70 and 6-pin  $\mu$ DFN packages and the MAX6384-MAX6390 are available in 4-pin SC70 and 6-pin  $\mu$ DFN packages.

## Applications

- |                         |                                    |
|-------------------------|------------------------------------|
| Computers               | Critical $\mu$ P and $\mu$ C       |
| Controllers             | Power Monitoring                   |
| Intelligent Instruments | Portable/Battery-Powered Equipment |
|                         | Dual Voltage Systems               |

## Pin Configurations

## Features

- ◆ Factory-Set Reset Threshold Voltages Ranging from +1.58V to +4.63V in Approximately 100mV Increments
- ◆  $\pm$ 2.5% Reset Threshold Accuracy Over Temperature (-40°C to +125°C)
- ◆ Seven Reset Timeout Periods Available: 1ms, 20ms, 140ms, 280ms, 560ms, 1120ms, 1200ms (min)
- ◆ 3 Reset Output Options
  - Active-Low Push-Pull
  - Active-High Push-Pull
  - Active-Low Open-Drain
- ◆ Reset Output State Guaranteed Valid Down to V<sub>CC</sub> = 1V
- ◆ Manual Reset Input (MAX6384/MAX6385/MAX6386)
- ◆ Auxiliary RESET IN (MAX6387/MAX6388/MAX6389)
- ◆ V<sub>CC</sub> Reset Timeout (1120ms or 1200ms)/Manual Reset Timeout (140ms or 150ms) (MAX6390)
- ◆ Negative-Going V<sub>CC</sub> Transient Immunity
- ◆ Low Power Consumption of 6 $\mu$ A at +3.6V and 3 $\mu$ A at +1.8V
- ◆ Pin Compatible with
  - MAX809/MAX810/MAX803/MAX6326/MAX6327/
  - MAX6328/MAX6346/MAX6347/MAX6348,
  - and MAX6711/MAX6712/MAX6713
- ◆ Tiny 3-Pin/4-Pin SC70 and 6-Pin  $\mu$ DFN Packages

## Ordering Information

PART	TEMP RANGE	PIN-PACKAGE
MAX6381LT__D_+T	-40°C to +125°C	6 $\mu$ DFN
MAX6381XR__D_+T	-40°C to +125°C	3 SC70
MAX6381XR__D_/V+T	-40°C to +125°C	3 SC70
MAX6382LT__D_+T	-40°C to +125°C	6 $\mu$ DFN
MAX6382XR__D_+T	-40°C to +125°C	3 SC70

**Note:** Insert reset threshold suffix (see Reset Threshold table) after "XR", "XS", or "LT." Insert reset timeout delay (see Reset Timeout Delay table) after "D" to complete the part number. Sample stock is generally held on standard versions only (see Standard Versions table). Standard versions have an order increment requirement of 2500 pieces. Nonstandard versions have an order increment requirement of 10,000 pieces. Contact factory for availability of nonstandard versions.

+ Denotes a lead(Pb)-free/RoHS-compliant package.  
/V denotes an automotive qualified part.

Ordering Information continued at end of data sheet.  
Typical Operating Circuit appears at end of data sheet.  
Selector Guide appears at end of data sheet.

# SC70/ $\mu$ DFN, Single/Dual Low-Voltage, Low-Power $\mu$ P Reset Circuits

## Detailed Description

### RESET Output

A  $\mu$ P reset input starts the  $\mu$ P in a known state. These  $\mu$ P supervisory circuits assert reset to prevent code execution errors during power-up, power-down, or brownout conditions.

Reset asserts when  $V_{CC}$  is below the reset threshold; once  $V_{CC}$  exceeds the reset threshold, an internal timer keeps the reset output asserted for the reset timeout period. After this interval, reset output deasserts. Reset output is guaranteed to be in the correct logic state for  $V_{CC} \geq 1V$ .

### Manual Reset Input (MAX6384/MAX6385/MAX6386/MAX6390)

Many  $\mu$ P-based products require manual reset capability, allowing the operator, a test technician, or external logic circuitry to initiate a reset. A logic low on  $\overline{MR}$  asserts reset. Reset remains asserted while  $\overline{MR}$  is low, and for the reset active timeout period ( $t_{RP}$ ) after  $\overline{MR}$  returns high. This input has an internal 63k $\Omega$  pullup resistor (1.56k $\Omega$  for MAX6390), so it can be left unconnected if it is not used.  $\overline{MR}$  can be driven with TTL or CMOS logic levels, or with open-drain/collector outputs. Connect a normally open momentary switch from  $\overline{MR}$  to GND to create a manual-reset function; external debounce circuitry is not required. If  $\overline{MR}$  is driven from long cables or if the device is used in a noisy environment, connecting a 0.1 $\mu$ F capacitor from  $\overline{MR}$  to GND provides additional noise immunity.

### RESET IN Comparator (MAX6387/MAX6388/MAX6389)

RESET IN is compared to an internal +1.27V reference. If the voltage at RESET IN is less than 1.27V, reset asserts. Use the RESET IN comparator as a user-adjustable reset detector or as a secondary power-supply monitor by implementing a resistor-divider at RESET IN (shown in Figure 1). Reset asserts when either  $V_{CC}$  or RESET IN falls below its respective threshold voltage. Use the following equation to set the threshold:

$$V_{INTH} = V_{THRST} (R1/R2 + 1)$$

where  $V_{THRST} = +1.27V$ . To simplify the resistor selection, choose a value of  $R2$  and calculate  $R1$ :

$$R1 = R2 [(V_{INTH}/V_{THRST}) - 1]$$

Since the input current at RESET IN is 50nA (max), large values can be used for  $R2$  with no significant loss in accuracy.

## Reset Thresholds (-40°C to +125°C)

## Applications Information

### Negative-Going VCC Transients

In addition to issuing a reset to the  $\mu$ P during power-up, power-down, and brownout conditions, the MAX6381-MAX6390 are relatively immune to short duration negative-going VCC transients (glitches).

The *Typical Operating Characteristics* section shows the Maximum Transient Durations vs. Reset Comparator Overdrive, for which the MAX6381-MAX6390 do not generate a reset pulse. This graph was generated using

# SC70/ $\mu$ DFN, Single/Dual Low-Voltage, Low-Power $\mu$ P Reset Circuits

MAX6381-MAX6390

Figure 1. RESET IN Configuration

Figure 2. RESET Valid to  $V_{CC} = \text{Ground}$  Circuit

## Reset Timeout Delay

SUFFIX	MIN
D1	1ms
D2	20ms
D3	140ms
D5	280ms
D6	560ms
D4	1120ms
D7	1200ms
MAX6390_ _D4	1120/140ms*
MAX6390_ _D7	1200/150ms*

\*The MAX6390 has a 1120ms or 1200ms  $\overline{\text{RESET}}$  timeout and a 140ms or 150ms manual reset timeout.

a negative-going pulse applied to  $V_{CC}$ , starting above the actual reset threshold and ending below it by the magnitude indicated (reset comparator overdrive). The graph indicates the typical maximum pulse width a negative-going  $V_{CC}$  transient may have without causing a reset pulse to be issued. As the magnitude of the transient increases (goes farther below the reset threshold), the maximum allowable pulse width decreases. A 0.1 $\mu$ F capacitor mounted as close as possible to  $V_{CC}$  provides additional transient immunity.

### Ensuring a Valid $\overline{\text{RESET}}$ Output Down to $V_{CC} = 0\text{V}$

The MAX6381-MAX6390 are guaranteed to operate properly down to  $V_{CC} = 1\text{V}$ . In applications that require valid reset levels down to  $V_{CC} = 0\text{V}$ , a pull-down resistor to active-low outputs (push/pull only, Figure 2) and a pullup resistor to active-high outputs (push/pull only) will ensure that the reset line is valid while the reset output can no longer sink or source current. This scheme

does not work with the open-drain outputs of the MAX6383/MAX6386/MAX6389/MAX6390. The resistor value used is not critical, but it must be small enough not to load the reset output when  $V_{CC}$  is above the reset threshold. For most applications, 100k $\Omega$  is adequate.

**Note:** Insert reset threshold suffix (see Reset Threshold table) after "XR", "XS", or "LT." Insert reset timeout delay (see Reset Timeout Delay table) after "D" to complete the part number. Sample stock is generally held on standard versions only (see Standard Versions table). Standard versions have an order increment requirement of 2500 pieces. Nonstandard versions have an order increment requirement of 10,000 pieces. Contact factory for availability of nonstandard versions.

\*MAX6390 is available with D4 or D7 timing only.

+Denotes a lead(Pb)-free/RoHS-compliant package.

# SC70/ $\mu$ DFN, Single/Dual Low-Voltage, Low-Power $\mu$ P Reset Circuits

## Pin Configurations (continued)

MAX6381-MAX6390

### Chip Information

PROCESS: BiCMOS

### Package Information

For the latest package outline information and land patterns, go to [www.maxim-ic.com/packages](http://www.maxim-ic.com/packages). Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

PACKAGE TYPE	PACKAGE CODE	OUTLINE NO.	LAND PATTERN NO.
3 SC70	X3+2	<a href="#">21-0075</a>	<a href="#">90-0208</a>
4 SC70	X4+1	<a href="#">21-0098</a>	<a href="#">90-0187</a>
6 $\mu$ DFN	L611+1	<a href="#">21-0147</a>	<a href="#">90-0080</a>

# SC70/ $\mu$ DFN, Single/Dual Low-Voltage, Low-Power $\mu$ P Reset Circuits

## Revision History

REVISION NUMBER	REVISION DATE	DESCRIPTION	PAGES CHANGED
0	10/00	Initial release	—
3	12/05	Added lead-free notation to <i>Ordering Information</i> .	1, 8
4	4/07	Added $\mu$ DFN package to data sheet.	1, 2, 5, 7–13
5	7/12	Added automotive package to <i>Ordering Information</i> .	1

Maxim cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim product. No circuit patent licenses are implied. Maxim reserves the right to change the circuitry and specifications without notice at any time. The parametric values (min and max limits) shown in the Electrical Characteristics table are guaranteed. Other parametric values quoted in this data sheet are provided for guidance.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
