

NB100LVEP222

2.5 V/3.3 V 2:1:15 Differential ECL/PECL $\div 1/\div 2$ Clock Driver

The NB100LVEP222 is a low skew 2:1:15 differential $\div 1/\div 2$ ECL fanout buffer designed with clock distribution in mind. The LVECL/LVPECL input signal pairs can be used in a differential configuration or single-ended (with V_{BB} output reference bypassed and connected to the unused input of a pair). Either of two fully differential clock inputs may be selected. Each of the four output banks of 2, 3, 4, and 6 differential pairs may be independently configured to fanout 1X or 1/2X of the input frequency. When the output banks are configured with the $\div 1$ mode, data can also be distributed. The LVEP222 specifically guarantees low output to output skew. Optimal design, layout, and processing minimize skew within a device and from lot to lot. This device is an improved version of the MC100LVE222 with higher speed capability and reduced skew.

The fsel pins and CLK_Sel pin are asynchronous control inputs. Any changes may cause indeterminate output states requiring an MR pulse to resynchronize any 1/2X outputs (See Figure 4). Unused output pairs should be left unterminated (open) to reduce power and switching noise.

The NB100LVEP222, as with most ECL devices, can be operated from a positive V_{CC}/V_{CC0} supply in LVPECL mode. This allows the LVEP222 to be used for high performance clock distribution in +2.5/3.3 V systems. In a PECL environment series or Thevenin line, terminations are typically used as they require no additional power supplies. For more information on using PECL, designers should refer to Application Note AN1406/D. For a SPICE model, refer to Application Note AN1560/D.

The V_{BB} pin, an internally generated voltage supply, is available to this device only. For single-ended LVPECL input conditions, the unused differential input is connected to V_{BB} as a switching reference voltage. V_{BB} may also rebias AC coupled inputs. When used, decouple V_{BB} and V_{CC}/V_{CC0} via a 0.01 μF capacitor and limit current sourcing or sinking to 0.5 mA. When not used, V_{BB} should be left open. Single-ended CLK input operation is limited to a $V_{CC}/V_{CC0} \geq 3.0$ V in LVPECL mode, or $V_{EE} \leq -3.0$ V in NECL mode.

Features

- 20 ps Output-to-Output Skew
- 85 ps Part-to-Part Skew
- Selectable 1x or 1/2x Frequency Outputs
- LVPECL Mode Operating Range:
 $V_{CC}/V_{CC0} = 2.375$ V to 3.8 V with $V_{EE} = 0$ V
- NECL Mode Operating Range:
 $V_{CC}/V_{CC0} = 0$ V with $V_{EE} = -2.375$ V to -3.8 V
- Internal Input Pulldown Resistors
- Performance Upgrade to ON Semiconductor's MC100LVE222
- V_{BB} Output
- These Devices are Pb-Free and are RoHS Compliant

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 11 of this data sheet.

NB100LVEP222

All V_{CC}, V_{CC0}, and V_{EE} pins must be externally connected to appropriate Power Supply to guarantee proper operation. V_{CC} pin internally connected to V_{CC0} pins. The thermally conductive exposed pad on package bottom (see package case drawing) must be attached to a heat-sinking conduit. This exposed pad is electrically connected to V_{EE} internally.

APPLICATIONS INFORMATION

Using the thermally enhanced package of the NB100LVEP222

The NB100LVEP222 uses a thermally enhanced 52-lead LQFP package. The package is molded so that a portion of the leadframe is exposed at the surface of the package bottom side. This exposed metal pad will provide the low thermal impedance that supports the power consumption of the NB100LVEP222 high-speed bipolar integrated circuit and will ease the power management task for the system design. In multilayer board designs, a thermal land pattern on the printed circuit board and thermal vias are recommended to maximize both the removal of heat from the package and electrical performance of the NB100LVEP222. The size of the land pattern can be larger, smaller, or even take on a different shape than the exposed pad on the package. However, the solderable area should be at least the same size and shape as the exposed pad on the package. Direct soldering of the exposed pad to the thermal land will provide an efficient thermal conduit. The thermal vias will connect the exposed pad of the package to internal copper planes of the board. The number of vias, spacing, via diameters and land pattern design depend on the application and the amount of heat to be removed from the package.

Maximum thermal and electrical performance is achieved when an array of vias is incorporated in the land pattern.

The recommended thermal land design for NB100LVEP222 applications on multi-layer boards comprises a 4 X 4 thermal via array using a 1.2 mm pitch as shown in Figure 7 providing an efficient heat removal path.

Figure 7. Recommended Thermal Land Pattern

The via diameter should be approximately 0.3 mm with 1 oz. copper via barrel plating. Solder wicking inside the via may result in voiding during the solder process and must be avoided. If the copper plating does not plug the vias, stencil print solder paste onto the printed circuit pad. This will supply enough solder paste to fill those vias and not starve

the solder joints. The attachment process for the exposed pad package is equivalent to standard surface mount packages. Figure 8, “Recommended solder mask openings”, shows a recommended solder mask opening with respect to a 4 X 4 thermal via array. Because a large solder mask opening may result in a poor rework release, the opening should be subdivided as shown in Figure 8. For the nominal package standoff of 0.1 mm, a stencil thickness of 5 to 8 mils should be considered.

Figure 8. Recommended Solder Mask Openings

Proper thermal management is critical for reliable system operation. This is especially true for high-fanout and high output drive capability products.

For thermal system analysis and junction temperature calculation the thermal resistance parameters of the package is provided:

Table 9. Thermal Resistance *

lfpm	θ_{JA} °C/W	θ_{JC} °C/W
0	35.6	3.2
100	32.8	4.9
500	30.0	6.4

* Junction to ambient and Junction to board, four-conductor layer test board (2S2P) per JESD 51-8

These recommendations are to be used as a guideline, only. It is therefore recommended that users employ sufficient thermal modeling analysis to assist in applying the general recommendations to their particular application to assure adequate thermal performance. The exposed pad of the NB100LVEP222 package is electrically shorted to the substrate of the integrated circuit and V_{EE} . The thermal land should be electrically connected to V_{EE} .

SCILLC owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of SCILLC's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. SCILLC reserves the right to make changes without further notice to any products herein. SCILLC makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does SCILLC assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. "Typical" parameters which may be provided in SCILLC data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. SCILLC does not convey any license under its patent rights nor the rights of others. SCILLC products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the SCILLC product could create a situation where personal injury or death may occur. Should Buyer purchase or use SCILLC products for any such unintended or unauthorized application, Buyer shall indemnify and hold SCILLC and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that SCILLC was negligent regarding the design or manufacture of the part. SCILLC is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
