Product Description

The CT300 is a 2D angular sensor in a dual full-bridge configuration from Crocus Technology developed on its patented MLU™ technology. The operating magnetic field for this 2D sensor is 20 mT to 80 mT and has an angular error of 0.6° after compensation over the full operating temperature range. It has differential outputs for both sine (SIN) and cosine (COS) axes and operates with a supply voltage range from 1.0 V to 5.5 V.

It is packaged in an 8-lead TSSOP package and for applications where space is critical, a low profile, small form factor 8-lead DFN package that is 2.00 × 2.00 × 0.45 mm in size. The CT300 is also made available in die form where it will be shipped as unsawn wafers (wafer map files will be provided to indicate known good die).

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the CT300 and may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Thermal Properties

Junction-to-ambient thermal resistance is a function of application and board layout and is determined in accordance to JEDEC standard JESD51-7 for a four (4) layer 2s2p FR-4 printed circuit board (PCB) with 2 oz. of copper (Cu). Special attention must be paid to not exceed junction temperature T_{J(MAX)} at a given ambient temperature T_A.
