

10 WATT GaN MMIC POWER AMPLIFIER, 6 - 18 GHz

Typical Applications

The HMC7149 is ideal for:

- Test Instrumentation
- General Communications
- Radar

Features

High Psat: +40 dBm
Power Gain at Psat: +10 dB
High Output IP3: +39.5 dBm
Small Signal Gain: 20 dB
Supply Voltage: +28 V @ 680 mA
50 Ohm Matched Input/Output
Die Size: 3.4 x 4.5 x 0.1 mm

Functional Diagram

General Description

The HMC7149 is an 10W Gallium Nitride (GaN) MMIC Power Amplifier which operates between 6 and 18 GHz. The amplifier typically provides 20dB of small signal gain, +40 dBm of saturated output power, and +39.5 dBm output IP3 at +28 dBm output power per tone. The HMC7149 draws 680 mA current from a +28V DC supply. The RF I/Os are matched to 50 Ohms for ease of integration into Multi-Chip-Modules (MCMs). All electrical performance data was acquired with the die eutectically attached to 1.02 mm (40 mil) thick CuMo carrier with multiple 1.0 mil diameter ball bonds connecting the die to 50 Ohm transmission lines on alumina.

Electrical Specifications, $T_c = +25^\circ\text{C}$, $V_{dd} = V_{dd1} = V_{dd2} = +28\text{ V}$, $I_{dd} = 680\text{ mA}$ ^[1]

Parameter	Min.	Typ.	Max.	Min.	Typ.	Max.	Min.	Typ.	Max.	Min.	Typ.	Max.	Units
Frequency Range	6 - 10			10 - 14			14 - 16			16 - 18			GHz
Small Signal Gain	19	21		18	20		17	19		18	20		dB
Gain Flatness		± 0.5			± 0.6			± 0.5			± 0.7		dB
Gain Variation Over Temperature		0.023			0.02			0.02			0.018		dB/°C
Input Return Loss		17			17			16			11		dB
Output Return Loss		17			17			18			12		dB
Output Power for 4 dB Compression (P4dB)		35			35			35			36		dBm
Power Gain for 4 dB compression (P4dB)		17			16			15			17		dB
Saturated Output Power (Psat)		40			40			40			40		dBm
Output Third Order Intercept (IP3) ^[2]		39.5			39			39.5			40.5		dBm
Power Added Efficiency		22			20			20			20		%
Supply Current (Idd @ Vdd = 28V)		680			680			680			680		mA

[1] Adjust Vgg between -3V and 0V to achieve Idd = 680 mA typical.

[2] Measurement taken at 28V @ 680 mA, Pout/tone = +28 dBm.

Pad Descriptions

Pad Number	Function	Description	Interface Schematic
1	RFIN	This pad is AC coupled and is matched to 50 Ohms. External blocking capacitor is required.	
2	Vdd1	Drain Bias	
3	RFOUT	This pad is DC coupled and is matched to 50 Ohms. External blocking capacitor is required.	
4	Vgg2	Gate Bias	
5	Vdd2	Drain Bias	
6	Vgg1	Gate Bias	
Die Bottom	GND	Die bottom must be connected to RF/DC ground.

10 WATT GaN MMIC POWER AMPLIFIER, 6 - 18 GHz

Mounting & Bonding Techniques for GaN MMICs

The die should be eutectically attached directly to the ground plane (see HMC general Handling, Mounting, Bonding Note).

50 Ohm Microstrip transmission lines on 0.127mm (5 mil) thick alumina thin film substrates are recommended for bringing RF to and from the chip (Figure 1). If 0.254mm (10 mil) thick alumina thin film substrates must be used, the die should be raised 0.150mm (6 mils) so that the surface of the die is coplanar with the surface of the substrate. One way to accomplish this is to attach the 0.102mm (4 mil) thick die to a copper tungsten or CuMo heat spreader which is then attached to the thermally conductive ground plane (Figure 2).

Microstrip substrates should be placed as close to the die as possible in order to minimize bond wire length. Typical die-to-substrate spacing is 0.076mm to 0.152 mm (3 to 6 mils).

Handling Precautions

Follow these precautions to avoid permanent damage.

Storage: All bare die are placed in either Waffle or Gel based ESD protective containers, and then sealed in an ESD protective bag for shipment. Once the sealed ESD protective bag has been opened, all die should be stored in a dry nitrogen environment.

Cleanliness: Handle the chips in a clean environment. DO NOT attempt to clean the chip using liquid cleaning systems.

Static Sensitivity: Follow ESD precautions to protect against ESD strikes.

Transients: Suppress instrument and bias supply transients while bias is applied. Use shielded signal and bias cables to minimize inductive pick-up.

Die placement: A heated vacuum collet (180°C) is the preferred method of pick up. Ensure that the area of vacuum contact on the die is minimized to prevent cracking under differential pressure. All air bridges (if applicable) must be avoided during placement. Minimize impact forces applied to the die during auto-placement.

Mounting

The chip is back-metallized with a minimum of 5 microns of gold and is the RF ground and thermal interface. It is recommended that the chip be die mounted with AuSn eutectic preforms. The mounting surface should be clean and flat.

Eutectic Reflow Process: An 80/20 gold tin 0.5mil (13um) thick preform is recommended with a work surface temperature of 280°C. Limit exposure to temperatures above 300°C to 30 seconds maximum. A die bonder or furnace with 95% N₂ / 5% H₂ reducing atmosphere should be used. No organic flux should be used. Coefficient of thermal expansion matching is critical for long term reliability.

Die Attach Inspection: X-ray or acoustic scan is recommended.

Wire Bonding

Thermosonic ball or wedge bonding is the preferred interconnect technique. Gold wire must be used in a diameter appropriate for the pad size and number of bonds applied. Force, time and ultrasonics are critical parameters: optimize for a repeatable, high bond pull strength. Limit the die bond pad surface temperature to 200°C maximum.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
