

**DATA SHEET**

# SE2438T: 2.4 GHz ZigBee®/Smart Energy Front-End Module

## Applications

- Smart meters
- In-home appliances
- Smart thermostats

## Features

- Integrated:
  - PA with up to +16 dBm output power
  - LNA with programmable bypass
  - Transmit and receive switching function
- +2.7 dB FEM Rx NF
- Differential Rx/Tx interface with integrated balun
- Fast switch on/off time <800 ns
- 2.0 V to 3.6 V supply operation
- Sleep mode current 0.05  $\mu$ A typical
- QFN (20-pin, 3.0 mm x 3.0 mm x 0.55 mm) package (MSL1 @ 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

**Figure 2. SE2438T Pinout—20-Pin QFN (Top View)**

**Figure 1. SE2438T Block Diagram**

## Description

The SE2438T is a high-performance, fully integrated RF front-end module (FEM) that is designed for ZigBee®/Smart Energy applications.

The SE2438T is designed for ease of use and maximum flexibility, with integrated fully matched input balun, integrated inter-stage matching and harmonic filter, and digital controls that are compatible with 1.6 V to 3.6 V Complementary Metal Oxide Semiconductor (CMOS) levels.

The RF blocks operate over a wide supply voltage range from 2.0 V to 3.6V, which allows the SE2438T to be used in battery-powered applications over a wide spectrum of the battery discharge curve.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

**Table 1. SE2438T Signal Descriptions**

Pin	Name	Description	Pin	Name	Description
1	VCC1	Positive supply	12	CSD	Sleep mode control
2	VB_IN	Bias voltage input supply to the transceiver (see Figure 3)	13	ANT	Connect to 50 Ω antenna
3	TRXP	Input/output signal to the transceiver, 100 Ω differential	14	GND	Connect to PCB ground
4	TRXN	Input/output signal to the transceiver, 100 Ω differential	15	DNC	Do not connect
5	GND	Connect to PCB ground	16	N/C	Not connected
6	VCC	Positive supply	17	N/C	Not connected
7	N/C	Not connected	18	GND	Connect to PCB ground
8	CPS	Bypass mode control, connect to RFIC or SoC GPIO	19	VCC2	Positive supply
9	GND	Connect to PCB ground	20	GND	Connect to PCB ground
10	CRX	Receive function control	Paddle	GND	Exposed die paddle; electrical and thermal ground; connect to PCB ground
11	CTX	Transmit function control			

The balun at the FEM PA input (or LNA output) can also be used to inject a bias operating point for the transceiver output stage (the shunt inductor provides a DC path on the other side). The inductor also tunes out any parasitic capacitance.

If the SOIC transceiver does not require a DC bias, leave the VB\_IN open.

Y1855

**Figure 3. Injecting a Bias Operating Point for the Transceiver Output Stage**

## Electrical and Mechanical Specifications

The absolute maximum ratings of the SE2438T are provided in Table 2. The recommended operating conditions are specified in Table 3.

The electrical specifications are provided in Tables 4 through 7. The state of the SE2438T is determined by the logic provided in Table 8.

**Table 2. SE2438T Absolute Maximum Ratings (Note 1)**

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage	V <sub>CC1</sub> , V <sub>CC2</sub> , V <sub>CC3</sub>	-0.3	3.6	V
Control pin voltages		-0.3	3.6	V
Operating temperature	T <sub>A</sub>	-40	125	°C
Storage temperature	T <sub>STG</sub>	-40	125	°C
Tx output power at the ANT port into 50 Ω load	P <sub>OUT_TX_MAX</sub>		+16	dBm
Tx input power at the TR port	P <sub>IN_TX_MAX</sub>		+6	dBm
Rx input power at the ANT port	P <sub>IN_RX_MAX</sub>		+5	dBm
Thermal resistance	θ <sub>JC</sub>		69	°C/W
Electrostatic discharge: Human Body Model (HBM), Class 1C	ESD		1000	V

**Note 1:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**CAUTION:** Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

**Table 3. Recommended Operating Conditions**

Parameter	Symbol	Minimum	Typical	Maximum	Units
Ambient temperature	T <sub>A</sub>	-40	+25	+125	°C
Supply voltage for transceiver core	V <sub>B_IN</sub>	1.6		3.6	V
Supply voltage on Vcc pins	V <sub>CC1</sub> , V <sub>CC2</sub> , V <sub>CC3</sub>	2.0	3.0	3.6	V

**Table 4. SE2438T Electrical Specifications: DC (Note 1)**  
**(VCC = VCC1 = VCC2 = 3 V, TA = +25 °C, Measured on the Evaluation Board [De-embedded to the Device], Unless Otherwise Noted)**

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
Total supply current	I <sub>CC_TX14</sub>	Tx mode P <sub>OUT</sub> = +14 dBm		33		mA
	I <sub>CC_TX12</sub>	Tx mode P <sub>OUT</sub> = +12 dBm		25		mA
	I <sub>CC_TX10</sub>	Tx mode P <sub>OUT</sub> = +10 dBm		20		mA
Quiescent current	I <sub>CC_TX</sub>	No RF		6		mA
Total supply current	I <sub>CC_RXHG</sub>	Rx low-noise amplifier (LNA) high-gain mode		5.5		mA
	I <sub>CC_RXLG</sub>	Rx LNA low-gain mode		2.7		mA
	I <sub>CC_RxBypass</sub>	Rx bypass mode			10	μA
Sleep supply current	I <sub>CC_OFF</sub>	No RF		0.05	1.0	μA

**Note 1:** Performance is guaranteed only under the conditions listed in this table.

**Table 5. SE2438T Electrical Specifications: Logic Characteristics (Note 1)**  
**(VCC = VCC1 = VCC2 = 3.0 V, TA = +25 °C, Measured on the Evaluation Board [De-embedded to the Device], Unless Otherwise Noted)**

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
Logic input high voltage	V <sub>BIH</sub>		1.6		3.6	V
Logic input low voltage	V <sub>BIL</sub>		0		0.3	V
Logic input high current	I <sub>BIH</sub>				1	μA
Logic input low current	I <sub>BIL</sub>				1	μA

**Note 1:** Performance is guaranteed only under the conditions listed in this table.

**Table 6. SE2438T Electrical Specifications: AC Characteristics (Note 1)**

**Note 2:** Modes 1 through 8, 11, and 15 are for internal use only.

## Evaluation Board Description

The SE2438T Evaluation Board is used to test the performance of the SE2438T FEM. The board is optimized for evaluation, experimentation, and investigation with an 802.15.4 signal source. The design and layout can be quickly and easily transferred into a production design.

An Evaluation Board schematic diagram is provided in Figure 4. A reference design schematic is provided in Figure 5. Table 9 describes the pins on the power and control I/O header (J3). Table 10 provides the Bill of Materials (BOM) list for Evaluation Board components. A photograph of the Evaluation Board is shown in Figure 6.

## Evaluation Board Setup Procedure

1. Connect (J1, J2) to 50  $\Omega$  instruments. Terminate all unused ports (if applicable) with 50  $\Omega$ .
2. Connect the supply ground to pin 19 or 20 of J3.
3. Connect 3.0 V to VCC, VCC1, and VCC2 of J3.
4. Connect 1.8 V to pin 8 of J3.
5. Monitor the 2.5 GHz amplifier transmit performance by applying an RF signal to J2 and monitoring the output power on J1 (ANT).
6. Monitor the 2.5 GHz amplifier receive performance by applying an RF signal to connector J1 (ANT) and monitoring the output signal on connector J2.

---

**CAUTION:** Care should be taken not to overdrive the amplifier by applying too much RF on the input to the device. A suitable starting input power would be  $-20$  dBm.

---

## Package Dimensions

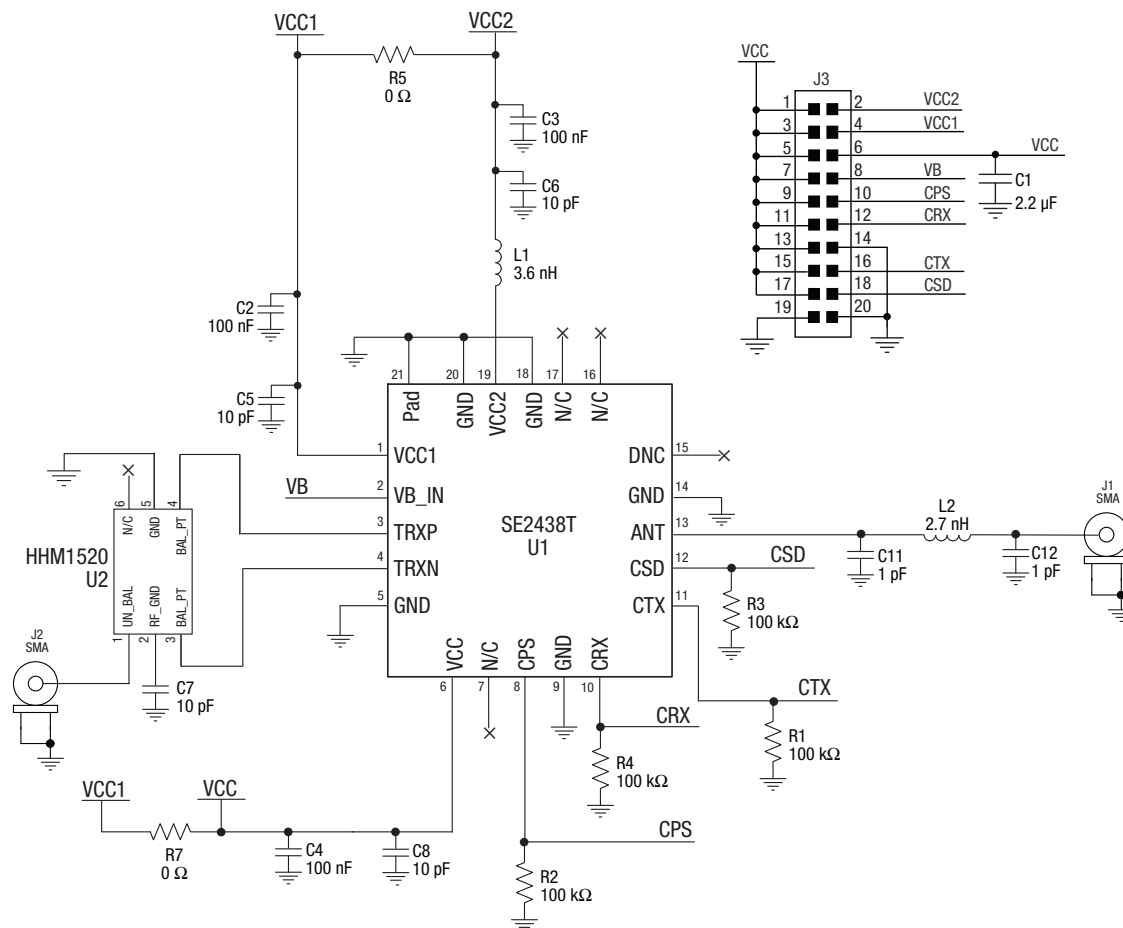

The PCB layout footprint for the SE2438T is provided in Figure 7. Typical part markings for the SE2438T are shown in Figure 8. Package dimensions are shown in Figure 9, and tape and reel dimensions are provided in Figure 10.

## Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SE2438T package is Pb free, RoHS compliant, halogen free, and rated to Moisture Sensitivity Level 1 (MSL1). For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

PCB Recommendations:

Metal Layer 1 = RF traces + control lines. Core thickness between top RF layer and ground plane is critical.  
 Metal Layer 2 = Solid ground plane. No traces routing.  
 Metal Layer 3 and 4 = Control lines + VCC traces (no VCC plane).  
 Pour copper on each layer connected to the ground plane. Use VCC traces in a star distribution pattern.

Y0772

Figure 4. SE2438T Evaluation Board Schematic

Table 9. SE2438T Power and Analog I/O Header: J3, 10x2

Pin Number	Evaluation Board Label	Description	Recommended setting
14, 19, 20	GND	Ground	General purpose grounds
1, 3, 5, 6, 7, 9, 11, 13, 15, 17	VCC	Supply voltage	General purpose VCC provided as the main power supply
4	VCC1	Supply voltage	General purpose VCC provided as the main power supply
2	VCC2	Supply voltage	General purpose VCC provided as the main power supply
8	VB	Bias	Output bias to transceiver
16	CTX	Control	See Table 8
10	CPS	Control	
18	CSD	Control	
12	CRX	Control	

Note :

- There are two ways that the SE2438T input can be interface single ended:
1. One input can be terminated with 50 Ω to ground, the other input impedance is 50 Ω.
  2. One input can be shorted to ground, the other input impedance is 100 Ω.

Y0771

Figure 6. SE2438T Evaluation Board Photograph

Notes:

1. All dimensions are in millimeters.
2. Dimensions and tolerances according to ASME Y14.5M-1994.
3. Unless specified, dimensions are symmetrical about center lines.
4. Via hole recommendations: 0.025 mm Cu via wall plating (minimum), via holes to be filled with conductive paste and plated over.
5. Stencil recommendations: 0.10 mm stencil thickness, laser cut apertures, trapezoidal walls and rounded corners offer better paste release.
6. Solder mask recommendations: contact board fabricator for recommended solder mask offset and tolerance.

Y1965

Figure 7. PCB Layout Footprint

**Figure 8. SE2438T Part Markings (Top View)**

Notes:

1. All dimensions are in millimeters.
2. Dimensions and tolerances according to ASME Y14.5--1994.
3. Terminal 1 identification mark located within this area.
4. Unilateral coplanarity zone applies to the exposed heat sink ground pad as well as the terminals.

Y0773

**Figure 9. SE2438T Package Dimensions**

**Notes:**

1. Measured from center line of sprocket hole to center line of pocket.
2. Cumulative tolerance of 10 sprocket holes is  $\pm 0.20$  mm.
3. Other material available.
4. Typical ESD surface resistivity is from  $10^5$  to  $10^{11}$  Ohms/square per EIA, JEDEC tape and reel specification.

All measurements are in millimeters.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
