**RoHS compliant**

Please check our website for the latest information regarding compliance to safety standards.

## FEATURES

### 1. High capacity type power PhotoMOS.

Can switch a wide range of currents and voltages. Can control various types of loads, from very small loads to a max. 6A AC/DC current for sequencers, motors, and lamps.

### 2. Low on-resistance and high sensitivity.

Low on-resistance of less than Typ. 0.015Ω (AQZ202G). High sensitivity LED operate current of Typ. 1 mA.

### 3. AC/DC dual use

Bi-directional control is possible. There is no need to differentiate depending on the load as was necessary with the conventional SSR.

### 4. Slim SIL 4-pin package

(L) 21.0 mm × (W) 3.5 mm × (H) 12.5 mm  
(L) .827 inch × (W) .138 inch × (H) .492 inch

The compact size of the 4-pin SIL package allows high density mounting

### 5. Low-level off state leakage current of max. 10 μA

**6. Controls low-level analog signals**  
The triac, photocoupler, or SSR cannot be used to control signals of less than several hundred mV. The high capacity type power PhotoMOS feature extremely low closed-circuit offset voltage to enable control of low-level analog signals without distortion.

## TYPICAL APPLICATIONS

- Traffic signals
- Measuring instruments
