

GENERAL DESCRIPTION

The SP809/SP810 are low power microprocessor (μ P) supervisory circuits used to monitor power supplies in μ P and digital systems.

They provide applications with benefits of circuit reliability and low cost by eliminating external components. If the V_{CC} supply voltage falls below preset threshold then a reset signal is asserted for at least 140ms after V_{CC} has risen above the reset threshold.

Both the SP809 and SP810 were designed with a reset comparator to help identify invalid signals, which last less than 140ms. The only difference between them is that they have an active-low $\overline{\text{RESET}}$ output and active-high RESET output, respectively. Low supply current (1 μ A) makes SP809/SP810 ideal for portable equipment.

The devices are available in 3 pin SOT-23 package.

APPLICATIONS

- Portable Electronic Devices
- Electrical Power Meters
- Digital Still Cameras
- μ P Power Monitoring

FEATURES

- Ultra Low Supply Current 1 μ A (typ)
- Guaranteed Reset valid to $V_{CC} = 0.9V$
- 140ms Power-On Reset Pulse Width
- Internally Fixed Threshold
2.3V, 2.6V, 2.9V, 3.1V, 4.4V, 4.6V
- 1.5 % Voltage Threshold Tolerance
- 3 Pin SOT-23 Package

Part Number	Output Type
SP809N	Open Drain Active Low
SP809	Push-Pull Low
SP810	Push-Pull Active High

TYPICAL APPLICATION DIAGRAM

Fig. 1: SP809 / SP810 Application Diagram

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V_{CC} -0.3V to 6.5V
 RESET, $\overline{\text{RESET}}$ -0.3V to $V_{CC}+0.3V$
 Output Current (RESET, $\overline{\text{RESET}}$) 20mA
 Power Dissipation ($T_A=70^\circ\text{C}$) 320mW
 Junction Temperature 125°C
 Storage Temperature -65°C to 150°C

OPERATING RATINGS

Input Voltage Range V_{CC} 0.9V to 6V
 Junction Temperature Range -40°C to 85°C

ELECTRICAL SPECIFICATIONS

Specifications with standard type are for an Operating Temperature of $T_A = 25^\circ\text{C}$ only; limits applying over the full Operating Temperature range are denoted by a “•”. Minimum and Maximum limits are guaranteed through test, design, or statistical correlation. Typical values represent the most likely parametric norm at $T_A = 25^\circ\text{C}$, and are provided for reference purposes only. Unless otherwise indicated, $T_A = 25^\circ\text{C}$.

Parameter	Min.	Typ.	Max.	Units	Conditions
Operating Voltage Range V_{CC}	0.9		6.0	V	
Supply Current I_{CC}		1.0	3.0	μA	$V_{CC}=V_{TH}+0.1V$
Reset Threshold V_{TH}	2.265	2.3	2.335	V	$T_A = +25^\circ\text{C}$
	2.254		2.346		• $T_A = -40^\circ\text{C}$ to 85°C
	2.561	2.6	2.639		$T_A = +25^\circ\text{C}$
	2.548		2.652		• $T_A = -40^\circ\text{C}$ to 85°C
	2.857	2.9	2.944		$T_A = +25^\circ\text{C}$
	2.842		2.958		• $T_A = -40^\circ\text{C}$ to 85°C
	3.054	3.1	3.147		$T_A = +25^\circ\text{C}$
	3.038		3.162		• $T_A = -40^\circ\text{C}$ to 85°C
	4.334	4.4	4.466		$T_A = +25^\circ\text{C}$
	4.312		4.488		• $T_A = -40^\circ\text{C}$ to 85°C
	4.531	4.6	4.669		$T_A = +25^\circ\text{C}$
	4.508		4.692		• $T_A = -40^\circ\text{C}$ to 85°C
V_{CC} Reset Delay t_{TRIP}		20		μs	$V_{CC}=V_{TH}$ to $(V_{TH} - 0.1V)$, $V_{TH}=3.1V$
Reset Active Timeout Period t_{RP}	140	230	560	ms	$T_A = +25^\circ\text{C}$
	100		1030		• $T_A = -40^\circ\text{C}$ to 85°C
RESET Output Voltage V_{OH}	$0.8V_{CC}$			V	$V_{CC}=V_{TH} - 0.1V$, $I_{SOURCE} = 1.2\text{mA}$
RESET Output Voltage V_{OL}			0.3		$V_{CC}=V_{TH} + 0.1V$, $I_{SINK} = 1.2\text{mA}$
$\overline{\text{RESET}}$ Output Voltage V_{OH}	$0.8V_{CC}$			V	$V_{CC}=V_{TH} + 0.1V$, $I_{SOURCE} = 1.2\text{mA}$
$\overline{\text{RESET}}$ Output Voltage V_{OL}			0.3		$V_{CC}=V_{TH} - 0.1V$, $I_{SINK} = 1.2\text{mA}$

Note 1: RESET output is for SP809; $\overline{\text{RESET}}$ output is for SP810.

PIN ASSIGNMENT

Fig. 3: SP809 / SP810 Pin Assignment

PIN DESCRIPTION

Name	Pin Number	Description
GND	1	Ground Signal
$\overline{\text{RESET}}$	2	Active Low Output Pin. RESET Output remains high while VCC is below the reset threshold
RESET		Active High Output Pin. RESET Output remains high while VCC is below the reset threshold
V _{CC}	3	Supply Voltage

THEORY OF OPERATION

μ P will be activated at a valid reset state. These μ P supervisory circuits assert reset to prevent code execution errors during power-up, power-down, or brownout conditions.

Reset is guaranteed to be a logic low for $V_{TH} > V_{CC} > 0.9V$. Once V_{CC} exceeded the reset threshold, an internal timer keeps RESET low for the reset timeout period; after this interval, RESET goes high.

If a brownout condition occurs (V_{CC} drops below the reset threshold), RESET goes low. Any time V_{CC} goes below the reset threshold, the internal timer resets to zero, and RESET goes low. The internal timer is activated after V_{CC} returns above the reset threshold, and RESET remains low for the reset timeout period.

BENEFIT OF HIGHLY ACCURATE RESET THRESHOLD

SP809/810 with specified voltage as $5V \pm 10\%$ or $3V \pm 10\%$ are ideal for systems using a

$5V \pm 5\%$ or $3V \pm 5\%$ power supply. The reset is guaranteed to assert after the power supply falls below the minimum specified operating voltage range of the system ICs. The pre-trimmed thresholds are reducing the range over which an undesirable reset may occur.

Fig. 10: Timing Waveforms

APPLICATION INFORMATION

NEGATIVE GOING V_{CC} TRANSIENTS

In addition to issuing a reset to the μ P during power-up, power-down, and brownout conditions, SP809 series are relatively resistant to short-duration negative-going V_{CC} transient.

ENSURING A VALID RESET OUTPUT DOWN TO $V_{CC} = 0$

When V_{CC} falls below 0.9V, SP809 RESET output no longer sinks current; it becomes an open circuit. In this case, high-impedance CMOS logic inputs connecting to RESET can drift to undetermined voltages. Therefore, SP809/810 with CMOS is perfect for most applications of V_{CC} down to 0.9V.

However in applications where RESET must be valid down to 0V, adding a pull-down resistor to RESET causes any leakage currents to flow to ground, holding RESET low.

INTERFACING TO μ P WITH BIDIRECTIONAL RESET PINS

The RESET output on the SP809N is open drain, this device interfaces easily with μ Ps that have bidirectional reset pins. Connecting the μ P supervisor's RESET output directly to the microcontroller's RESET pin with a single pull-up resistor allows either device to assert reset.

TERMINAL DETAILS

1. Refer to Jecdec MO-178
2. Dimension "D" does not include mold flash, protrusions or gate burrs.
Mold flash, protrusion or gate burrs shall not exceed 10mils per side.
3. Dimension "E1" does not include inter lead flash or protrusions.
4. All dimensions are millimeters.

REVISION HISTORY

Revision	Date	Description
2.0.0	2011	Reformat of Datasheet Correction of package drawing
2.0.1	August 2017	Correct Reset Delay conditions. Updated to MaxLinear logo. Updated format and ordering information table.
2.0.2	November 2017	Corrected typo from rev 2.0.1, added 2 missing overlines to RESET in Electrical Specifications.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
