

Low-Voltage, High-Speed, Quad, SPST CMOS Analog Switches

MAX4614/MAX4615/MAX4616

General Description

Features

The MAX4614/MAX4615/MAX4616 quad, low-voltage, high-speed, single-pole/single-throw (SPST) analog switches are pin compatible with the industry-standard 74HC4066/MAX4610 analog switches. On-resistance (10Ω max) is matched between switches to 1Ω max and is flat (1Ω max) over the specified signal range. Each switch handles $V+$ to GND analog signal levels. Maximum off-leakage current is only $1nA$ at $T_A = +25^\circ C$ and $6nA$ at $T_A = +85^\circ C$.

The MAX4614 has four normally open (NO) switches, and the MAX4615 has four normally closed (NC) switches. The MAX4616 has two NO switches and two NC switches. These CMOS switches operate from a single $+2V$ to $+5.5V$ supply. All digital inputs have $+0.8V$ and $+2.4V$ logic thresholds, ensuring TTL/CMOS-logic compatibility when using a single $+5V$ supply.

- ♦ **Fast Switching Times**
12ns t_{ON} , 10ns t_{OFF}
- ♦ **Pin Compatible with Industry-Standard 74HC4066/MAX4610**
- ♦ **Guaranteed On-Resistance**
10 Ω max (+5V supply)
20 Ω max (+3V supply)
- ♦ **Guaranteed Match Between Channels (1 Ω max)**
- ♦ **Guaranteed Flatness Over Signal Range (1 Ω max)**
- ♦ **<6nA Off-Leakage Current Over Temperature ($T_A = +85^\circ C$)**
- ♦ **Rail-to-Rail[®] Signal Handling**
- ♦ **TTL/CMOS-Logic Compatible**

Applications

Low-Voltage, High-Speed, Quad, SPST CMOS Analog Switches

ABSOLUTE MAXIMUM RATINGS

(Voltages referenced to GND)

| | |
|--|-----------------------|
| V+, IN_ | -0.3V to +6V |
| COM_, NO_, NC_ (Note 1) | -0.3V to (V+ + 0.03V) |
| Continuous Current (any terminal) | ±75mA |
| Peak Current (NO_, NC_, COM_) (pulsed at 1ms, 10% duty cycle) | ±200mA |

Continuous Power Dissipation (T_A = +70°C)

| | |
|--|-------|
| 14-Pin TSSOP (derate 6.3mW/°C above +70°C) | 500mW |
| 14-Pin Narrow SO (derate 8.00mW/°C above +70°C) | 640mW |
| 14-Pin Plastic DIP (derate 10.00mW/°C above +70°C) | 800mW |

Operating Temperature Ranges

| | |
|-------------------------------------|-----------------|
| MAX461_C_ | 0°C to +70°C |
| MAX461_E_ | -40°C to +85°C |
| Storage Temperature Range | -65°C to +150°C |
| Lead Temperature (soldering, 10sec) | +300°C |

Note 1: Signals on NO_, NC_, or COM_ exceeding V+ or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS—Single +5V Supply

| | | | TA = TMIN to TMAX | | | 100 | |
| SWITCH DYNAMIC (Note 3) | | | | | | | |
| Turn-On Time | tON | VNO_ or VNC_ = 1V, TA = +25°C | | | 6.5 | | ns |
| Turn-Off Time | tOFF | VNO_ or VNC_ = 1V, TA = +25°C | | | 2.8 | | ns |

Note 2: The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.

Note 3: Guaranteed by design.

Note 4: $\Delta R_{ON} = R_{ON}(\text{max}) - R_{ON}(\text{min})$.

Note 5: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal range.

Note 6: Leakage parameters are 100% tested at maximum-rated hot temperature and guaranteed by correlation at +25°C.

Note 7: Off-Isolation = $20\log_{10}(V_{COM_} / V_{NO_})$, VCOM_ = output, VNO_ = input to off switch.

Note 8: Between any two switches.

Low-Voltage, High-Speed, Quad, SPST CMOS Analog Switches

Applications Information

Power-Supply Sequencing and Overvoltage Protection

Do not exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the devices.

Proper power-supply sequencing is recommended for all CMOS devices. Always apply V+ before applying analog signals or logic inputs, especially if the analog or logic signals are not current limited. If this sequencing is not possible, and if the analog or logic inputs are not current limited to 20mA, add a small-signal diode (D1) as shown in Figure 1. If the analog signal can dip below GND, add D2. Adding protection diodes reduces the analog signal range to a diode drop (about 0.7V) below V+ (for D1), and to a diode drop above ground (for D2). Leakage is unaffected by adding the diodes. On-resistance increases by a small amount at low supply voltages. Maximum supply voltage (V+) must not exceed 6V.

Adding protection diodes causes the logic thresholds to be shifted relative to the power-supply rails. This can be significant when low supply voltages (+5V or less) are used. With a +5V supply, TTL compatibility is not guaranteed when protection diodes are added. Driving IN1 and IN2 all the way to the supply rails (i.e., to a

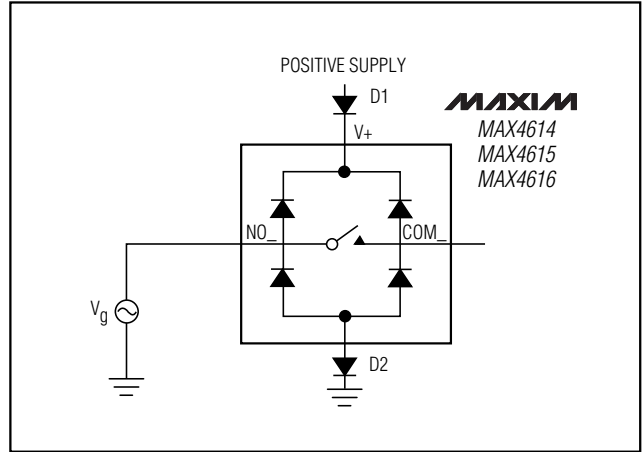

Figure 1. Overvoltage Protection Using Two External Blocking Diodes

diode drop higher than the V+ pin, or to a diode drop lower than the GND pin) is always acceptable.

Protection diodes D1 and D2 also protect against some overvoltage situations. With Figure 1's circuit, if the supply voltage is below the absolute maximum rating, and if a fault voltage up to the absolute maximum rating is applied to an analog signal pin, no damage will result.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
