Precision Resistors

Product Overview

The well established Holsworthy (Holco) range of precision resistors encompasses technology in Thin Film (Metal Film), Wirewound and Thick Film technologies. Products are available in both surface mount and leaded styles ranging from small 0402 size chip resistors to 14 watt leaded devices, thereby combining precision technologies and requirements for power in a range of products.
Additionally many of these products are offered with low MOQ's making these products available to a very wide range of customers.

- Surface mount products down to 0402 size
- Tolerances to 0.01%, TCR to 5ppm
- Standard range high precision surface mount at 0.1% 10ppm available from catalogue distribution
- Some products released to BS CECC specifications
- Small quantities available on many parts
- "Holco" leaded resistors (H8, H4, H4P) can also be offered with tolerance and TCR matching of resistors in sets
- Wirewound precision available up to 14 watt power rating

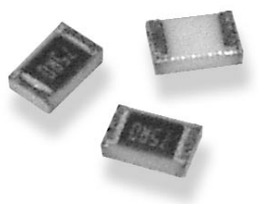
Type RN73 Series



The RN73 Resistor Series is a high stability precision chip resistor range offering various power dissipations relating to chip size, TCR's down to 5ppm/°C and resistance tolerances to 0.1%. The resistor is produced with three sputtered layers giving optimum performance. Values are restricted to the E96 and E24 value grids. The RN73 Resistor has accurate and uniform physical dimensions to facilitate placement.

Key Features

- **High Precision - TCR 5ppm/°C and 10ppm/°C**
- **Tolerance of 0.1%**
- **Thin Film (Nichrome)**
- **Choice of Packages (0805 STD)**
- **Stable High Frequency Performance**
- **100V DC Operating Voltage**
- **Temperature Range -55°C to +125°C**

Characteristics - Electrical

	0402 (1E)	0603 (1J)	0805 (2A)	1206 (2B)
Rated Power:	0.063W	0.063W	0.1W	0.125W
Maximum Working Voltage:	25V	50V	100V	150V
Maximum Overload Voltage:	50V	100V	200V	300V
Working Temperature Range:	-55°C ~ +125°C			
Rated Ambient Temperature:	70°C			

Resistance Value Range

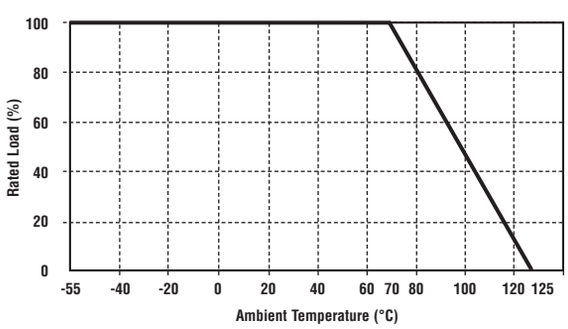
Package Size	Package Code	T.C.R. (ppm/°C)	Resistance Range E-24, E-96 series
0402	1E	C (±10)	47R - 100K
0603	1J	C (±10)	10R - 270K *
0805	2A	A (±5)	10R - 150K
0805	2A	C (±10)	5R11 - 470K *
1206	2B	A (±5)	5R11 - 470K
1206	2B	C (±10)	5R11 - 470K *

Tolerances greater than 0.1% previously supplied under the RN73 Series, are now branded CPF. Please request the CPF Series datasheet.

TCR's greater than 10ppm previously supplied under the RN73 Series, are now branded CPF. Please request the CPF Series datasheet.

* Limited value range available in non RoHS compliant version

Power Derating Curve



For temperatures in excess of 70°C the load shall be derated in accordance with this curve.

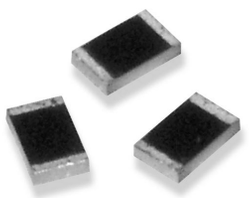
Type RP73 Series



The RP73 Resistor Series is a stable thin film chip resistor range offering various power dissipation relating to chip size. The resistor is produced with three print layers for longer life and optimum performance. Values are restricted to E96 and the RP73 Resistor has accurate and uniform physical dimensions to reduce placement problems. The range is constantly being extended. Due to special technology used to produce tight tolerance, low TCR at high values the RP73 Resistor is not individually part marked.

Key Features

- High Precision - TCR 10ppm/°C
- Tolerance Down to 0.05%
- Wider Resistance Value Options
- Supplied on Reels of 1000 or 5000
- Thin Film (Nichrome)
- Stable High Frequency Performance
- 200 V DC Operating Voltage
- Temperature -55°C to +155°C

Characteristics - Electrical

Solderability - 235°C 2 seconds
DIN IEC 68T2 - 20 Ta Meth. 1
Max Soldering Temperature - 260°C 10 seconds
DIN IEC 68 T2 - 20, Tb Meth. 1A

Handling Recommendations

When flow soldering - the land width must be smaller than the chip resistor width to properly control the solder application. Generally, the land width can be chip resistor width (W) x 0.7 to 0.8. When reflow soldering - solder application amount can be adjusted.
Thus the land width can be set to W x 1.0 to 1.3.

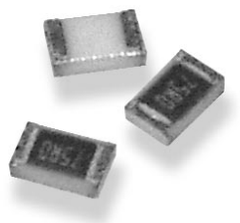
Type CPF Series



Precision metal terminations are screen printed onto a ceramic base and fired. The resistive element is sputtered and fired and the passivation layer added. The pre-scribed tile is broken into strips, the end plating is fired on and the strips broken into individual components. Final termination is made by electroplating.

Key Features

- **Thin film precision resistors with TC's of 25 and 50ppm and tolerances to 0.1%. Applications in measurement, telemetry and for sensing circuits.**
- **Case sizes 0603, 0805, 1206**
- **CPF chip resistors are suitable for all applications where close accuracy and stability are essential**

Marking

E24 series resistors are marked with a three digit code.
E96 series resistors are marked with a four digit code.
0603 E96 series are unmarked.

Mounting

The resistors are suitable for processing on automatic insertion equipment.

Performance Characteristics

The evaluation of the performance characteristics is carried out with reference to IECQ specifications QC 400 000 and QC 400 100.

TEST REF	Long Term Tests ±(0.5% + 0.05 ohm)
4.23	Climatic sequence
4.24	Damp heat, steady state
4.25.1	Endurance at 70 °C
4.25.3	Endurance at 125 °C
TEST REF	**Short Term Tests ±(0.5% + 0.05 ohm)**
4.13	Overload
4.32	Adhesion
4.33	Bond strength of end face plating
4.19	Rapid change of temperature
4.18	Resistance to soldering heat

Storage

Unopened reels should be stored within a temperature range of +5°C to +25°C, separated from any dust, chemicals and solvent based materials. Non-adherence to this procedure could affect the solderability of this product.

How to Order

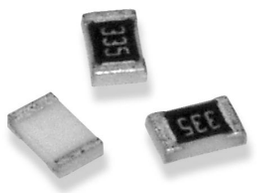
Type CPG Series



Precious metal terminations are screen printed onto a ceramic base and fired. The resistive element is screen printed and fired and the passivation layer added. Each resistor is trimmed to tolerance by laser. The pre-scribed tile is broken into strips, the end plating is fired on and the strips broken into individual components. Final termination is made by electroplating.

Key Features

- **Case sizes 0603, 0805, 1206**
- **A semi-precision thick film resistor with a temperature coefficient of 50ppm/°C and tolerance down to 0.5%.**
- **CPG chip resistors are suitable for most applications, including high frequency operation, owing to the short lead structure and low capacitance.**
- **Particularly suitable for use where low TC or tolerance are important at a low cost.**

Type S Series

Tyco Electronics Components introduces a range of surface mount power resistors to meet today's circuit design needs. One design concept allows an engineer to choose from three styles (Lo Ohm, Power, or Ultra Precision) while staying within the new standard circuit board land pattern guidelines now accepted by the wirewound resistor industry. Each size offers low profile case design with flexible tinned copper terminations for reliable solder joints. All styles utilise a fully welded construction technique, unlike other designs that rely solely on tinned termination connections. These features allow the S Series to withstand the higher temperatures associated with reflow, vapour phase, or infrared (IR) manufacturing processes without degradation.

Key Features

- **Low Profile Design**
- **Available on Tape (3 Reel Sizes)**
- **Very Wide Value Range**
- **Ideal for Current Sensing**
- **Up to 3.0 Watts Power**
- **High TCR Versions (to 6000ppm)**
- **Stable to 5ppm/°C**

Cleaning Conditions

After soldering use cleaning solvents such as chlorosen, dyefreon, suitable aqueous or semi aqueous cleaner.

Storage

To prevent damage to the electrode, be sure to observe the following cautions for storage.

- Store in 40°C maximum ambient temperature, and 70% maximum R.H.
- For maximum possible shelf life do not disturb polythene sleeve until you are ready to use.
- Store where there are no harmful gases containing sulphur or chlorine.

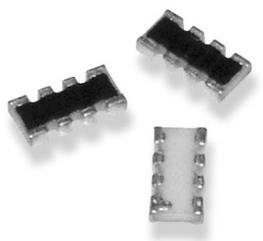
Type MRS Series

Type MRS Series



The MRS series is an entirely new chip network utilising nickel chrome sputtering on high purity alumina. This network has been designed for high volume applications and is offered with 4 isolated resistors on a single substrate (12.06 sizes) at 0.1% with convex terminals. A wide value range and alternative T.C.R's make this a most versatile resistor solution.

Key Features

- Suitable for Tight Spaces
- High Precision Thin Film
- Wide Value Range
- Lower Placement Costs
- Range of Stabilities
- Low Cost in Volume
- High Reliability Design

Characteristics - Electrical

Type HOLCO Series

The Holco range of Precision Metal Film Resistors meets the requirement for economically priced components for industrial and military applications. The manufacturing facility utilises closely controlled production processes including the sputter coating of metal alloy films to ceramic substrates, and laser spiralling to achieve close tolerance and high stability resistors. An epoxy coating is applied for environmental and mechanical protection. Commercially the Series is available in two case sizes, from 1 ohm to 4M ohms, tolerances from 0.05% to 1% and TCR's from 5ppm/°C to 100ppm/°C. Offered with release to BS CECC 40101 004, 030 and 804 the H8 is available via distribution.

Key Features

- **Ultra Precision - Down To 0.05%**
- **Matched Sets Available To 2ppm/°C**
- **High Pulse Withstand**
- **Low Reactance**
- **Low TCR - Down To 5ppm/°C**
- **Long Term Stability**
- **Up To 1 Watt At 70°C**
- **Released To CECC 40101 004, 030 And 804**

Type R Series

The resistive element comprises a thin film of nickel-chrome alloy evaporated onto a high thermal conductivity ceramic element. Metal end caps are force fitted to the element prior to spiralling to value. Tinned copper lead wires are welded to the end caps and the components are then coated. One coat of phenolic resin is followed by three coats of epoxy resin. All resistors are tested for value and tolerance.

Key Features

- **Precision metal film resistors with tolerance to 0.1% and temperature coefficients to 15ppm.**
- **Metal film resistors have excellent stability under load and severe environmental conditions. They exhibit very low noise current and voltage coefficients. Precision metal film resistors are particularly suitable in all applications where long-term stability is important.**

Type KC Series

The KC Series draws together high power and high precision in one attractively priced silicone coated package. Windings are accurately space wound on ceramic or aluminium oxide cores. Winding pitch is controlled for high winding density to obtain maximum power dissipation by transmitting more heat down the length of the core, thereby lowering the "Hot Spot" temperature. The resistance wire is welded to the end cap using the most advanced electronically controlled D.C. Welders. Where high reliability is required the resistance wire is sandwiched between a weld tab and the end cap to provide the ultimate in reliability. Coated power resistors have high resistance to commonly used solvents.

Key Features

- High Power, Precision & Reliability
- 0.5 Watts up to 14 Watts
- Ayrton Perry Windings Available
- Tolerances to 0.01%
- Low Temperature Coefficient
- 350°C Max Temperature
- Conformally Coated
- High Reliability

Characteristics - Electrical

Resistance Values:	R10 to 275K
Resistance Tolerance:	10%, 5%, 3%, 1%, (available to ± 0.01% on request)
Rated Dissipation:	0.5 watts to 14 watts
Dielectric Strength:	1KV (All Types)
Insulation Resistance:	1000 Meg Ohms
Terminal Strength:	5lb pull test
Solderability:	Meets MIL - STD - 202
Temperature Coefficient of Resistance:	±20ppm/°C - 100R and over ±30ppm/°C - 10R to 100R ±50ppm/°C - 1R0 to 10R Closer T.C.'s available. Please ask for quotation
Temperature Range:	-55°C to +355°C
Environmental Requirements:	Meets or exceeds military specifications

Type UPW Series

The resistive element is wire wound onto a moulded high temperature plastic bobbin with a central former. The direction of winding is reversed part way through the winding, giving very low values of inductance.

These Neohm resistors use bobbin assemblies with flattened lead ends, providing high resistance to pull, vibration and torsional forces during handling, assembly and life.

Key Features

- **Custom weld tabs and copper weld leads ensure a good mechanical and electrical connection between the element and the lead wires. Protection is given to the windings by means of a layer of silicone RTV rubber. This allows movement of the windings during temperature cycling due to loads and to varying ambient temperatures. Outer protection is given by means of a hot transfer moulded epoxy compound which ensures an airtight coating with no trapped air.**
- **Superior quality wire-wound resistors with very low selection tolerances and temperature coefficients down to 1 ppm. 3 case sizes are available. T/C, ratio and pair matching is available and customer specifications are welcome. These components exhibit high stability under load and severe environmental conditions.**
- **Packed loose in boxes**

Current Sense Resistors

Product Overview

The CGS range of Current Sensing Resistors is available in Surface Mount and Leaded types. In addition a range of mounting styles including Kelvin Connection and 4 terminal leaded connection are also available.
Using technologies in Thick Film, Bulk Metal, Metal Plate and Wirewound allows this range of products to be offered in a range of sizes from 0402 SMD size to large size ceramic cased resistors, capable of dissipating 20W with a 30 Amp current rating. This range of Resistors is very suitable for current sensing in applications such as Power Supply circuits, Electric Meter sensing, Protection Feed Back circuits and a wide range of Automotive applications.

- Surface mount products down to 0402 size
- Ceramic cased resistors to 20W rating
- TCR's to 20ppm and tolerances down to 1%
- Values ranging from R0005 to 10R
- Many products stocked in Distribution
- Wide range of technologies allows best fit product

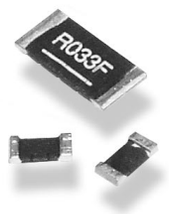
Type TL Series

Type TL Series



Tyco Electronics Components is pleased to offer this unique High Power, metal chip resistor for current sensing positions. It has a special metal resistive element and suitable barrier layers beneath the solder to prolong terminal life. Following the developments by semiconductor manufacturers in the production of a range of IC's for battery charge management and low voltage power supplies, the TL Series satisfies the demand for a low ohmic shunt resistor to act as a current sensor. It has particular applications in the automotive industry for sensing in EMU's.

Key Features

- **Up to 1 Watt at 70°C**
- **Supplied on Tape**
- **Ideal for Current Detection**
- **Wide Value Range R005 to 1R0 Possible**
- **Fully Automated Manufacture**
- **12:06, 20:10 and 25:12 Packages Available**
- **Available in Distribution**

Characteristics - Electrical

	1206	2010	2512
Resistance Value Range:	R003-R20	R003-R50	R001-R50
Resistance Tolerance:	± 1%		
Power Rating:	Up to 1 watt at 70°C derating to zero at 170°C		
Operating Temperature:	-65°C to +170°C		
Inductance:	< 5 Nanohenries		
T.C.R.	±75ppm/°C (R007-R20/R50)		

Mechanical

Body Construction:	Fully Welded Element
Terminations:	60/40 Tinned Copper
Coating:	Epoxy

Power Derating Curve

Type	Power Rating
TL2B	0.25 Watts

Type CSR Series

The CSR Resistor Series is a unique development available from Tyco Electronics Components in that it offers Kelvin connections in a 1 & 2 watt low ohmic resistor designed for current sensing. The CSR utilises fully welded construction techniques unlike other designs which rely solely on tinned termination connections. These features allow the CSR Resistor Series to withstand the higher temperatures associated with reflow, vapour phase, or infrared (IR) manufacturing processes without degradation.

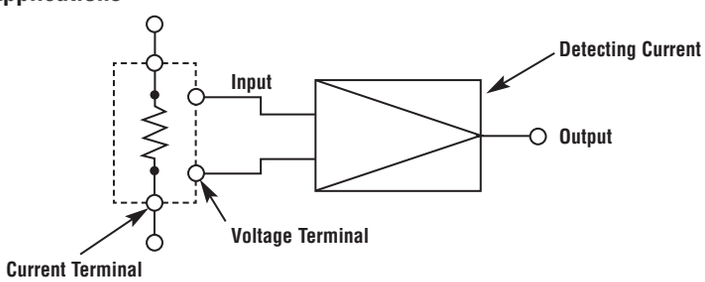
Key Features

- 1 & 2 Watt Styles
- Tolerances down to ±0.5%
- Kelvin Connections
- TCR 50 ppm/°C
- Stable On Board Performance
- Ideal for Current Sensing

Characteristics - Electrical

	CSR-1	CSR-2
Power Rating at 70°C:	1W	2W
Resistance Range (milli Ohms):	5-50	5-50
Resistance Tolerance:	D (±0.5%) F (±1%)	F (±1%)
T.C.R. ppm/°C:	±50	±50
Operating Temperature Range:	-55°C to +125°C	-55°C to +125°C

Example of CSR Application - Only for Direct Current, Low Voltage Applications



Sensed Voltage shall be within the rated voltage of the Sensing IC

Type S Series

Tyco Electronics Components introduces a range of surface mount power resistors to meet today's circuit design needs. One design concept allows an engineer to choose from three styles (Lo Ohm, Power, or Ultra Precision) while staying within the new standard circuit board land pattern guidelines now accepted by the wirewound resistor industry. Each size offers low profile case design with flexible tinned copper terminations for reliable solder joints. All styles utilise a fully welded construction technique, unlike other designs that rely solely on tinned termination connections. These features allow the S Series to withstand the higher temperatures associated with reflow, vapour phase, or infrared (IR) manufacturing processes without degradation.

Key Features

- **Low Profile Design**
- **Available on Tape (3 Reel Sizes)**
- **Very Wide Value Range**
- **Ideal for Current Sensing**
- **Up to 3.0 Watts Power**
- **High TCR Versions (to 6000ppm)**
- **Stable to 5ppm/°C**

Characteristics - Electrical

Cleaning Conditions

After soldering use cleaning solvents such as chlorosen, dyefreon, suitable aqueous or semi aqueous cleaner.

Storage

To prevent damage to the electrode, be sure to observe the following cautions for storage.

- Store in 40°C maximum ambient temperature, and 70% maximum R.H.
- For maximum possible shelf life do not disturb polythene sleeve until you are ready to use.
- Store where there are no harmful gases containing sulphur or chlorine.

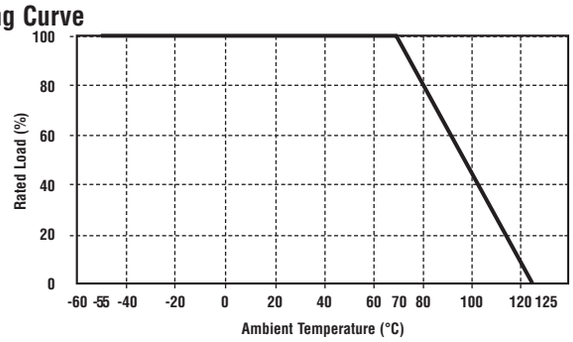
Power Derating Curve



If this device is expected to run at full continuous power then action to improve the cooling should be taken. This can be a metal substrate, copper pad left under the chip, an opening in the PCB or extra large solder pads.

*** Recommended Circuit Board Design**

For resistors operated in ambient temperatures above 70°C, power rating must be derated in accordance with this curve.

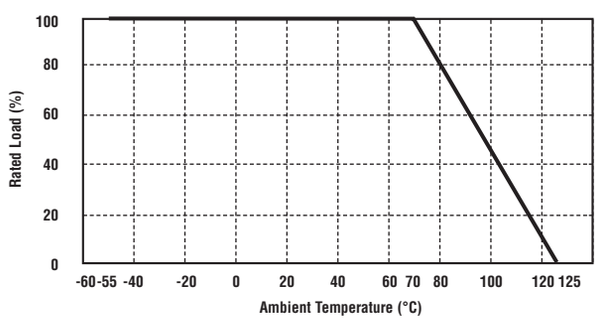
* For 1 W Additional Existing Value: R018, R02, R025, R04, R05, R075

Derating Curve



For resistors operated in ambient temperatures above 70°C, power rating must be derated in accordance with this curve.

Dimensions

Handling Recommendations

When flow soldering - the land width must be smaller than the chip resistor width to control the solder application.
Generally, the land width can be chip resistor width x 0.7 to 0.8. When reflow soldering - The amount of solder can be adjusted.
Thus the land width can be set to W x 1.0 to 1.3.

Type SBL Series

Type SBL Series

The SBL Series is a low ohmic non-inductive resistor with a low temperature coefficient in a fully insulated ceramic housing. It is ideal for applications in power supply regulation, motor control current monitoring, feedback control loops, overload sensors and radio frequency applications. The solid metal element has welded copper terminals and is encapsulated in a ceramic housing, filled with compressed silica sand.

Key Features

- 4 Watts & 5 Watts Versions
- Solid Metal Element
- Non-Inductive
- Low Temperature Coefficient
- High Reliability
- Custom Design (Subject to Volume)
- 4 Watt Device Available in Distribution

Characteristics - Electrical

Resistance Values (4 Watt):	R005, R01, R015, R018, R022, R033, R047, R051
Resistance Values (5 Watt):	R01, R015, R018, R022, R033, R047, R051
Resistance Tolerance:	± 5%
Rated Dissipation (4 Watt):	4 Watts at 70°C
Rated Dissipation (5 Watt):	5 Watts at 70°C
Dielectric Strength:	2000 Volts
Insulation Resistance:	< 10000 Mohms
Maximum Continuous Working Voltage:	√Power x Resistance AC RMS

Mechanical

Climatic Category:	-55 / 250 / 56
Temperature Range:	-55°C to +250°C
Derating:	Linear from 70°C to 250°C

Environmental

Resistance to Solder Heat:	260°C (ΔR ± 0.2% typical)
Terminal Strength:	3lb pull test
Solderability:	Meets MIL Std 202
Marking:	Black ink on ceramic body - Manufacturer, Resistance Value and Tolerance

Type OP Series

The OP Series is designed for current sensing using a range of low TCR resistive alloys to create the value and current capability you require.

The ribbon is welded to 2mm diameter solid (OFHC) copper leads that are tin/copper electroplated. The OP is ideally suited to current detection in power supply circuits, electric metre sensing, protection feed back circuits and a wide range of automotive positions.

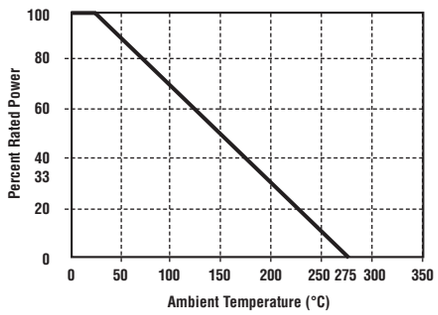
Key Features

- **Small Size Light Weight**
- **Easy to Mount**
- **Very Low Inductance**
- **Temperature Range -55°C to +155°C**
- **High Power - 5 Watts**
- **Custom Designs Welcomed**
- **RoHS Compliant**

Characteristics - Electrical

Resistance Value:	R0005 – R002
Resistance Tolerance (%):	1%, 5%
Temperature Coefficient of Resistance:	90ppm/°C
Inductance:	<30nH
Short term Overload:	5 Times rated power for 5 seconds
Power Rating (W):	5W
Temperature Range:	-55°C to +155°C
Terminals:	Tin / Silver

Derating Curve



For ambient temperatures above 25°C derate accordingly to the above curve.

Type OS Series

The OS Series is designed for current sensing using a range of low TCR resistive alloys to create the value and current capability you require.

The ribbon is welded to 1mm diameter solid (OFHC) copper leads that are tin/lead electroplated. The OS is ideally suited to current detection in power supply circuits, electric meter sensing, protection feed back circuits and a wide range of automotive positions.

Key Features

- **Small Size Light Weight**
- **Easy to Mount**
- **Completely Non Inductive**
- **Temperature Range -55°C to +155°C**
- **High Power up to 5 Watts**
- **High Current up to 14 Amps**
- **Custom Designs Welcomed**

Characteristics - Electrical

Resistance Value:	R005, R01, R015, R022, R025, R033, R047, R051 (or custom)
Resistance Tolerance:	5%, 10% (tighter by discussion)
Temperature Coefficient of Resistance:	Material 20ppm/°C Effective 100ppm/°C over range
Rated Ambient Temperature:	+70°C
Operating Temperature Range:	- 40°C + 200°C
Load Life @ 125°C:	1000 hours ΔR< ± 2% max.
Temperature Cycling:	- 40°C + 125°C 1000 ΔR< ± 2% max.
Moisture No Load:	1000 hours ΔR< ± 1% max.
Pack Quantity:	500 boxed - loose pack

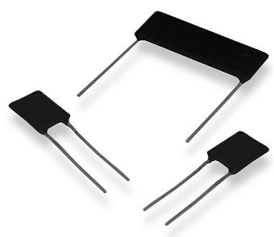
Type HER Series



Tyco Electronics Components offer a range of metal plate power shunt resistors. The HER Series is ideal for power applications at an economical price. These resistors have low TCR's and inductance characteristics along with flameproof coatings.

Key Features

- Up to 5 Watts
- Low Values (R005 - R30)
- Metal Plate Construction
- Low TCR Rating
- Low Inductance
- Flameproof Coating

Type HMA Series

Tyco Electronics Components offer a range of metal plate shunt resistors. The HMA Series is an axial moulded resistor ideal for current sensing applications including switching and linear power supplies, instrumentation and power amplification.

Key Features

- 3 Watt Moulded Axial Package
- Low Temperature Coefficient
- Low Inductance
- Metal Plate Construction
- Low Values (R005 to R35)

Characteristics - Electrical

Resistance Range:	0.005 ohm to 0.35 ohm
Resistance Tolerance:	±1%, ±3%, ±5%, ±10%. Lower tolerances available as specials
Temperature Coefficient:	20ppm - 90ppm
Dielectric Strength:	500 Vac
Insulation Resistance:	1000 Meg ohm minimum dry
Short Time Overload:	5 seconds at 5 x rated power

Mechanical

Terminal Strength:	4.5 kg pull
Solderability:	Satisfactory when tested in accordance with method 208 of MIL - STD - 202

Type HPA Series

Tyco Electronics Components offer a range of Metal Plate Power Shunt resistors. The HPA Series is an Axial Ceramic resistor for use in current sensing applications. The wide Wattage range (1 - 20 Watts) enables the HPA Series to cover most applications.

Key Features

- 8 Sizes (1W - 20W)
- Up to 20W Dissipation
- Ceramic Construction
- Low Values (R005 to R40)
- Moulded Axial

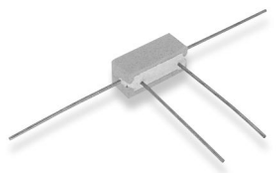
Type HPF Series



Tyco Electronics Components offer a range of metal plate shunt resistors. The HPF Series is a 4 wire moulded device for current sensing applications to facilitate dual mounting requirements to minimise stock profiles. A wide power range of 2 to 20 Watts is available which will suit most applications.

Key Features

- Wide Versatile Mounting Styles
- Low Cost Solution
- Moulded Package
- Values Down to R0025
- 7 Sizes (2W to 20W)

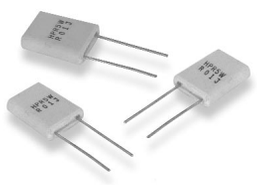
Type HPR Series



The HPR Series is a radial low ohm resistor for current sensing in a range of instrumentation and control equipment. Wattage ranges from 2 to 7 Watts in a slim line ceramic package.

Key Features

- 2 to 7 Watts Radial Ceramic
- Very Low Inductance
- Low Profile Version
- R005 to R80 Value Range
- Up to 30 Amps Current Rating
- ±100ppm/°C Temperature Coefficient

Characteristics - Electrical

Resistance Range:	R005 - R80
Insulation Resistance:	1000 Meg ohms minimum
Maximum Current:	2 watt - 5 watt 15A, 7 watt - 10 watt 30A
Temperature Coefficient:	± 100ppm/°C
Terminal Strength:	Radial 1kg - Axial 4.5kg
Measuring Point:	Axial type 10mm. ± 0.5 from body Radial type 4mm. ± 0.5 from body

Type KNP Series

Tyco Electronics Components has utilised a unique proprietary controlled atmosphere processing technique which allows for greater precision in element formation and produces extremely stable, low resistance values. All KNP Series resistors are moulded in a high temperature silicone resin. This provides a higher dissipation or power to size ratio. It also provides superior heat, thermal slack and moisture resistance. It will not peel, flake or deteriorate with commonly used cleaning solvents including freon.

Tyco Electronics Components Low Ohm resistors are ideal for test instruments, power amplifiers, all types of current sensing applications including switching and linear power supplies. Custom design applications are also available, where volumes justify investment.

Key Features

- **Flexible Manufacturing**
- **Tolerances from ±0.1% to ±5%**
- **Robust Silicone Moulding**
- **High Power to Size Ratio**
- **Temp Range -55°C to 275°C**
- **Low Inductance <20 Nanohenries**
- **R005-R10 Value Range**
- **Exceeds MIL-PRF-49465**

Characteristics - Electrical

Product Overview

Tyco Electronics has been manufacturing its CGS brand of power resistors for over 50 years.

We offer one of the widest ranges of power resistor styles and technologies in the world; including thick film, wire wound and foil. Within these technologies we offer standard ranges of resistors for both the low ohm and high ohm applications, with a combination of tolerances and temperature coefficients. Our standard resistor range offers resistors up to 1500 watts and selected products can withstand 12kV voltage isolation.

Our designers use only the best materials to guarantee quality and stability. Long term endurance is a standard requirement and our in-house test facility ensures that all products meet our own stringent test programmes.

We specialise in customisation of the power resistor range and have a first rate design team based in our R & D facility at Swindon, Wiltshire.

- Market leader in power technology
- Standard and custom designs available
- Wide range of technologies
- Low inductive versions available
- Diverse market applications
- High reliability materials
- In house test facility
- Highly qualified and experienced design team
- Standard products available through distribution
- Brand name CGS

Type SM Series

Tyco Electronics Components introduces a surface mount power resistor suited to meet today's circuit design needs. Each size offers low profile case design with flexible tinned copper terminations for reliable solder joints. All styles utilize a fully welded construction technique, unlike other designs that rely solely on tinned termination connections. These features allow the SM Series to withstand the higher temperatures associated with reflow, vapour phase, or infrared (IR) manufacturing processes without degradation.

Key Features

- **Low Profile Design**
- **Available on Tape**
- **Very Wide Value Range**
- **Ideal for Power Circuitry**
- **Available in 1, 2 or 3 Watts**

Type S Series

Tyco Electronics Components introduces a range of surface mount power resistors to meet today's circuit design needs. One design concept allows an engineer to choose from three styles (Lo Ohm, Power, or Ultra Precision) while staying within the new standard circuit board land pattern guidelines now accepted by the wirewound resistor industry. Each size offers low profile case design with flexible tinned copper terminations for reliable solder joints. All styles utilise a fully welded construction technique, unlike other designs that rely solely on tinned termination connections. These features allow the S Series to withstand the higher temperatures associated with reflow, vapour phase, or infrared (IR) manufacturing processes without degradation.

Key Features

- **Low Profile Design**
- **Available on Tape (3 Reel Sizes)**
- **Very Wide Value Range**
- **Ideal for Current Sensing**
- **Up to 3.0 Watts Power**
- **High TCR Versions (to 6000ppm)**
- **Stable to 5ppm/°C**

Cleaning Conditions

After soldering use cleaning solvents such as chlorosen, dyefreon, suitable aqueous or semi aqueous cleaner.

Storage

To prevent damage to the electrode, be sure to observe the following cautions for storage.

- Store in 40°C maximum ambient temperature, and 70% maximum R.H.
- For maximum possible shelf life do not disturb polythene sleeve until you are ready to use.
- Store where there are no harmful gases containing sulphur or chlorine.

Type FC Series

This small size pluggable, high power resistor is a popular product in the Tyco Electronics Components CGS range. The resistors are wirewound on to an inert core of glass fibre. The leads and end cap assemblies are firmly crimped onto the core and winding. A particularly resilient silicone cement coating provides an insulating, humidity proof and flameproof seal. They are available in a choice of height profiles and the FCX type can be supplied with axial leads. The FC Series is widely used in monitors, power supplies, white goods and brown goods where a low cost, high power resistor is required.

Key Features

- **Up to 8 Watts at 70°C**
- **Low Cost**
- **Choice of Height Profiles**
- **Flame Retardant**
- **Proven Reliability**
- **Resistant to PCB Solvents**
- **Mechanized Assembly**
- **Widely Available via Distribution**

Type SQ Series

This flexible range of Power Wirewound Resistors either have wire or power oxide film elements. The SQ series resistors are wound or deposited on a fine non- alkali ceramic core then embodied in a ceramic case and sealed with an inorganic silica filler. This design provides a resistor with high insulation resistance, low surface temperature, excellent T.C.R., and entirely fire proof construction. These resistors are ideally suited to a range of areas where low cost, and efficient thermal performance are important design criteria. Metal film cores adjusted by laser spiral are used where the resistor value is above that suited to wire. Similar performance is obtained although short time overload is slightly derated.

Key Features

- Choice of Styles
- Bracketed Types Available
- Temp. Op. -55°C to +250°C
- Wide Value Range
- Stable TCR 300ppm/°C
- Custom Designs Welcome
- Inorganic Flame Proof Construction

Type SBC (Square Ceramic) Series

This range of Power Wirewound Resistors is wound on continuous glass fibre elements or has a ceramic core depending on resistance value. The element is housed in a ceramic case and sealed with an inorganic silica filler. Their construction gives a resistor with high insulation resistance and low surface temperature, capable of withstanding high overload currents. These resistors are ideally suited to a variety of applications within industrial and commercial environments, where performance and reliability are of prime importance. Applications include fan force ovens, cooker hoods, power supplies and triac based speed controls. Custom Design Variants in value and style are welcomed.

Key Features

- Up to 17 Watts
- Fusible Styles
- Vertical or Axial
- Non Flammable
- Special Solvent Resistance
- Customer Specials Invited
- Widely Available from Distribution

Characteristics - Electrical

Resistance Values:	Series E24 5% E12 10% (see tables for value limits per style)
Resistance Tolerance:	±5% ±10%
Maximum Continuous Voltage:	$\sqrt{P \times R}$
Load Life:	ΔR <±3% 1000 hours at 70°C
Power Rating:	See Surface Temperature Curve (below)

Environmental and Mechanical

Temperature Coefficient of Resistance:	200ppm/°C (400ppm/°C below 18R)
Resistance to Solder Heat:	ΔR < 0.2% (350°C for 2.5 seconds)
Voltage Coefficient of Resistance:	Negligible
Temperature Range:	0°C to 70°C
Load Stability:	ΔR < 5% (full load at 70°C for 1000 hours)
Long Term Damp Heat:	ΔR < 0.2% (21 days at 40°C for 93% humidity)
Shelf Life:	ΔR < 1.0% (per 12 months)
Insulation Resistance:	> 10000M
Dielectric Strength:	2000V RMS
Lead Material:	Steel - Solder coat
Marking:	Legend mark, Manufacturer name, type, ohmic value and tolerance.

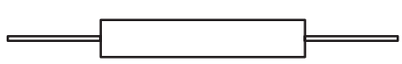
Type SBC - SBCH (Axial Power Resistor)

We offer three ceramic profiles for the main wattage sizes.
These are for additional heat dissipation and vertical mounting of resistors.
The suffix for each style is as follows:-

SBC Standard **SBCH 4/5/6/7** **SBCH 8/11/15**

Type SBCHE (For Vertical Mounting)

We offer SBCHE Styles with one lengthened lead for vertical mounting. See additional hardware on last page.



One Lead Length 20mm longer than case length. Supplied with one longer lead wrapped back in flute in ceramic.

Type C Series

Tyco Electronics Components has offered the 'C' Series of Vitreous Enamelled Wirewound Resistors for more than 25 years and as a result of continuous development and investment in the latest production equipment now supplies a product with a proven record of reliability and quality. These economically priced resistors are capable of dissipating high power from a relatively small size in harsh environmental conditions. The resistors are manufactured from quality materials for optimum reliability and stability.

Key Features

- Vitreous Enamel Coated
- Quality Approved
- Up to 14 Watts Power
- All Welded Construction
- Overload 10 x 5 Seconds
- Ammo Packed or Reeled (3-7 Watt)

Characteristics - Electrical

Type ER/ERV Series

A tough silicone coated power resistor. The coating and marking are resistant to Trichloroethene VG, Genklene LV Hot and Cold, Freon TE, Arklone A, Flourosil E, Freon TMS, Arklone L Hot and Cold and Arklone F Hot. If the resistor is in contact with the PCB the maximum dissipation to avoid damage to the PCB may be ascertained by reference to the hot spot temperature graph. Vertical mounting style is available. The ER series is suited to a wide range of industrial, control, medical and consumer applications.

Key Features

- High Power Dissipation
- Tough Silicone Coating
- Special Pulse Styles Available
- 0.5% Tolerance Available
- Resistant to Most Solvents
- Vertical Mount Styles Available
- Custom Designs Welcomed
- Widely Available via Distribution

Characteristics - ER Series
Electrical

Type HS Series

Tyco Electronics Components is the leading European supplier of standard and custom designed aluminium housed resistors for general-purpose use, power supplies, power generation and the traction industry. The HS is a range of extremely stable, high quality wire wound resistors capable of dissipating high power in a limited space with relatively low surface temperature. The power is rapidly dissipated as heat through the aluminium housing to a specified heatsink.

The resistors are made from quality materials for optimum reliability and stability. Tyco Electronics Components can test resistors to conform to relevant international, MIL or customer specifications.

Tyco Electronics Components is happy to advise on the use of resistors for pulse applications and to supply information for high voltage use and low-ohmic value, alternative mountings and termination type.

Key Features

- **Established product with proven reliability**
  - **Leading the way with over 50 years of design and manufacturing experience**
- **5 Watts to 300 Watts (500 Watt and 1000 Watt versions available)**
  - **Largest range on the market**
- **Versatile product**
  - **Bench mark in every industry**
- **Custom designs**
  - **Windings, terminations, mountings - We have a solution for your application**
- **Low resistance, low inductance and higher voltage versions available**
  - **Specialising the standard**

Characteristics - Electrical
HSA & HSC - 5 Watts to 75 Watts

	HSA5	HSA10	HSA25	HSA50	HSC75
Dissipation @ 25°C with Heatsink (Watts):	10	16	25	50	75
Without Heatsink:	5.5	8	12.5	20	45
Ohmic Value Min (Ohms):	R01	R01	R01	R01	R05

Standard Heatsink - Area (mm^2):	99500	99500	375000	476500	578000
Thickness (mm):	3	3	3	3	3
Number of Mounting Holes:	4 hole	4 hole	6 hole	6 hole	6 hole

Electrical

Long Term Stability:	For improvements in long-term stability, resistors must be derated as follows; for 50% of stated ΔR maximum dissipation must not exceed 70% of rating; for 25% of stated ΔR maximum, dissipation must not exceed 50% of rating
Insulation Resistance:	Dry: 10,000MΩ minimum. After moisture test: 1000MΩ minimum.
Heat Dissipation:	Although the use of proprietary heat sinks with lower thermal resistance is acceptable, up rating is not recommended. The use of proprietary heat sink compound to improve thermal conductivity is recommended for optimum performance of all sizes but essential for HSC200, HSC250 & HSC300
Specification:	Temperature coefficient below 100R, 50ppm/°C Temperature coefficient above 100R, 30ppm/°C Tolerance, 5% standard: 10%, 3%, 2%, 0.5% & 0.25% available Tolerance for values below R10, 10% standard

Applications

- **Braking Resistor**
- **Balancing Resistor**
- **Capacitor Charging & Discharging**
- **Crowbar**
- **Filter**
- **Electrical Machinery general use**
- **Available through Distribution**

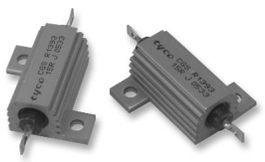
Type HSX Series



Tyco Electronics Components is the leading European supplier of standard and custom designed aluminium housed resistors for general-purpose use, power supplies, power generation and the traction industry. The HSX range consists of extremely stable, high quality wire wound resistors capable of dissipating high power in a limited space with relatively low surface temperatures. The power is rapidly dissipated as heat through the aluminium housing to a specified heatsink. The HSX offers increased creep distance by virtue of a remodelled and extended nose cone.

The resistors are made from quality materials for optimum reliability and stability. Tyco Electronics Components can test resistors to conform to relevant international, MIL or customer specifications.

Tyco Electronics Components is happy to advise on the use of resistors for pulse applications and to supply information for high voltage use and low-ohmic value, alternative mountings and termination type.

Key Features

- **10mm Creep Distance**
  - **High voltage performance up to 3.5kV**
- **Broad Range of Options and Custom Design Capability**
  - **The solution for your application**
- **Special Pulse Variants Available**
  - **Maximised wire wound element technology for high pulse energy absorption**
- **Wide Resistance range: 0.5Ω– 86kΩ**
  - **Coupled with 1% tolerance gives ultimate design flexibility**
- **Proven Reliability**
  - **Benefits from over 50 years of HS resistor design and manufacture**

Type ME Series

Tyco Electronics Components is a leading supplier of standard and custom-designed vitreous enamel power resistors for industrial, control, and general-purpose applications.

The ME Range of wire and tape wound tubular resistors is designed for maximum power density (in free air), and a durable vitreous enamel coating provides a reliable and resilient, high power solution.

Resistors are supplied with flexible wire terminations or tags (for screw, solder or use with Faston connectors). Options include low inductance winding, different tube sizes for a given power rating, and a range of mechanical packages including horizontal or vertical mounting.

Tyco Electronics Components is happy to advise on the use of resistors for pulse applications and to supply information for high voltage use, low-ohmic values, alternative mountings and termination types in addition to testing resistors to conform to relevant international, MIL or customer specifications.

Key Features

- **High Power Dissipation in Free Air**
  - **No need for a heatsink**
- **Overload 15 Times Rated Power**
  - **A compact and cost effective solution**
- **Mechanically Stable in Demanding Environments**
  - **Vitreous Enamel coating resists impact and temperatures of 400°C**
- **Broad Range of Options: Adjustable Resistance, Low TCR, Custom Design Capability**
  - **Gives ultimate design flexibility**
- **Established Product with Proven Reliability**
  - **Consistent high quality at a competitive price**
- **48 Standard Products from 30W to 625W**
  - **The solution for your application**

Type TG Series

Tyco Electronics Components is a leading European supplier of standard and custom designed glass-coated power resistors for industrial, control, and general-purpose applications.
The TG is a glass-coated power resistor designed for maximum power density (in free air), and offers a reliable low cost, high power solution.
The highly refractory glass bond coat resists impact and does not deteriorate under power overload and the high quality construction offers optimum reliability and stability. Tyco Electronics Components can test resistors to conform to customer specifications.
A large selection of tube styles, diameters and mounting feet are available to meet every space and package requirement. Tyco Electronics Components is happy to advise on the use of resistors for pulse applications and to supply information for high voltage use, low-ohmic values, alternative mountings and termination types.

Key Features

- **High Power Dissipation in Free Air**
  - **No need for a heatsink**
- **Mechanically Stable in Demanding Environments**
  - **Durable glass bond coating resists impact and temperatures of 400°C**
- **Broad Range of Options: Terminal styles, Silicon Coating, Low TCR, Custom Design Capability.**
  - **Gives ultimate design flexibility**
- **Established Product with Proven Reliability**
  - **Tyco Electronics quality at a highly competitive price**
- **A range of 34 Standard Products from 8.5W to 293W**
  - **Specify the optimum configuration for your application**

Long Term Stability:	For improvements in long-term stability, resistors must be derated as follows; for 50% of stated ΔR maximum dissipation must not exceed 70% of rating; for 25% of stated ΔR maximum, dissipation must not exceed 50% of rating.	
Specification:	Maximum Temperature coefficient:	200ppm/oC
	Typical Temperature coefficient:	60ppm/oC
	Special Low TCR version:	20ppm/oC
	Tolerance:	5% standard. 1%, 10% available.

Applications

- **Braking**
- **Crowbar**
- **Inrush Limiting**
- **Balancing**
- **Capacitor Charging & Discharging**
- **Filter**
- **Electrical Machinery**

Type YP Series

Type YP Series

The YP series resistors are coated with multilayer silicone to give an excellent protection to the resistance wire at temperatures from -55°C to 350°C. The terminals are designed for quick and easy mounting on capacitors and have a mounting pitch of 22.2 and 31.8 mm. These are wirewound ceramic core resistors designed for voltage balancing of series connected aluminium electrolytic capacitors. These resistors are also suitable for capacitor voltage discharge safety applications in high voltage circuits. Ideally suited for industrial grade capacitors.

Key Features

- **Flameproof Silicone Coating**
- **Stainless Steel Mounting Terminals for Direct Mounting on Capacitors**
- **Premium Quality Resistive Wires**
- **Custom Designs Possible**
- **Innovative Design**

Characteristics - Electrical

Resistance Values:	2K, 10K, 18K, 27K, 47K. Other values on request and to order
Resistance Tolerance:	±5%
Temperature Coefficient:	±30 ppm/°C (typ.), ±100 ppm/°C (maximum)
Maximum Voltage:	825V dc or ac(rms) for YP10, 570V for YP8
Derating:	Derated linearly to zero at 350°C
Power Rating:	10W @ 70°C for YP10 and 8W @ 70°C for YP8
Stability:	70°C, 1000hr - R/R @ 100% load <±5%
Standard:	Performance as per BS - CECC 40201-002
Marking:	Type, Resistance value, Tolerance

Type MRF Series

The MRF range of low profile power resistors offers reliability in the most demanding applications.
With a package height of 13mm this device will fit where space is at a premium and the use of advanced materials enables an operating temperature in excess of 390°C giving very high power and pulse absorption.
Housed in a durable Zinc plated steel casing, this resistor offers environmental protection to IP33 and a dielectric strength of 3kV making it a very practical and versatile choice.

Key Features

- **1300W in a 133cm² footprint**
  - **Exceptional power density of 9.8W/cm²**
- **Impressive Pulse Capability**
  - **Large active element can absorb up to 5.5kJ**
- **No Heatsink Required**
  - **Dissipates up to 550W in free air**
- **Slimline Casing**
  - **13mm casing height for design flexibility**
- **Environmental Protection to IP33**
  - **Reliable in the harshest conditions**

Applications

- **Braking**
- **Balancing**
- **Capacitor Charging & Discharging**
- **Crowbar**
- **Filter**
- **Power Supplies**
- **Electrical Machinery**
- **Inrush Limiting**

Type MPC Series

Type MPC Series

A range of non inductive thick film power resistors complementing the T0220 packaged MPR series (20 Watt heat sink styles), being vertically mounted and suitable to dissipate power from 3 Watts up to 10 Watts. Available in values from 1R0 to 200K ohms they are the idea solution for small snubber circuits, the output side of high speed pulse generators and low inductive resistor requirements in switch mode power supplies.

Key Features

- High Power Density
- Easy to Mount
- Non Inductive
- Stable at 100ppm/°C
- Temperature Range -55°C to +155°C
- High Power up to 10 Watts
- Voltage Proof 5000V dc
- Non Flammable

Characteristics - Electrical

Resistance Values:	1R0 to 200K
Resistance Tolerance:	1%, 5%
Temp. Coefficient of Resistance:	±100ppm/°C
Rated Power @ 70°C:	3 to 10 Watts nominal
Equivalent Parallel Capacitance (100 MHz):	1.0pf
Maximum Operating Voltage:	300V AC
Withstanding Voltage:	5000V
Operating Temperature Range:	-55°C to +155°C
Overload Current:	20 x rated current up to 8 ms (ΔR ± 0.5%)

Mechanical

	Test Condition MILR83401	Specification
Life (Rated Power):	40°C, rated power, 90 min ON 30 min OFF, 1000 hrs.	ΔR± (1.0% + 0.05 ohm)
Life (Moisture Load):	60°C, 90 - 95% RH, rated power 90 min ON 30 min OFF, 1000 hrs.	ΔR± (1.0% + 0.05 ohm)
Temperature Cycling:	Room temp > -55°C 30 min > RT 10 min ± 120°C 30 min > RT 10 min 5 cycles	ΔR± (0.25% + 0.05 ohm)
Flammability:	UL94V-O rated	
Soldering Heat:	350°C Solderpot, 3 secs.	ΔR± (0.25% + 0.05 ohm)
Insulation Resistance:	DC 100V, 1 min	Over 1000M ohm
Vibration:	10 - 50 Hz, 1 min, 20G, X-Y-Z 1 hr.	ΔR± (0.25% + 0.05 ohm)

Type BDS100 Series

With less than 40nH inductance and a 100 Watt power rating in an easy-mounting 38mm x 25mm Isotop case, the BDS100 offers high power density over a wide range of ohmic values (R47 – 1M0) and benefits from 10 years experience in the field.
Available in 6 resistor configurations with 2 or 4 easy to connect terminals, the resistors are made from quality materials for optimum reliability and stability with very low partial discharge.
Tyco Electronics Components can test resistors to conform to relevant customer specifications, and will advise on the use of resistors for pulse energy and high voltage applications (HV designs available).
Resistors with alternative terminations or flying leads are available, and custom designs are welcome.
This product is available via distribution.

Key Features

- **100W in a 9.5cm² footprint**
  - **Gives an impressive power density of 10.5W/cm²**
- **Virtually inductance-free**
  - **Inductance < 40nH**
- **Wide resistance range: 0.47Ω to 1MΩ**
  - **Coupled with 1% tolerance gives ultimate design flexibility**
- **Multiple terminal configurations and multi-resistor packages**
  - **The space saving solution**
- **Partial discharge <10pC at 2kV**
  - **Guaranteeing quality, reliability and long life**

Characteristics - Electrical

Resistance Range:		R47 - 1MO
Resistance Tolerance:		± 10%, 5% (Tighter by discussion)
TCR:	R<1Ω	± 250ppm/°C
	R>1Ω	± 150ppm/°C
Rated Power:	Heatsink: 115°C / 100°C / 60°C	25W / 50W / 100W
Capacitance:	Parallel	15pF
	To Earth	40pF
Series Inductance:		40nH (Maximum)
Limiting Element Voltage:	(100W or Less)	500Vdc/ac rms
Isolating Voltage:	(Terminal to Heatsink)	2.5kVac rms
Single Shot Voltage:	1.5/50ms	4kV
Insulation Resistance:	(at 500V dc)	>100GΩ
Partial Discharge:	at 2kV	<10pC
Heat Dissipation:	Although the use of proprietary heat sinks with lower thermal resistance is acceptable, up rating is not recommended. The use of proprietary heat sink compound to improve thermal conductivity is essential.

Type BDS600 Series

With a maximum inductance of 80nH and a rated power of 600W (60°C Heatsink) in a 57mm x 60mm casing, the BDS600 offers high power density over a wide range of ohmic values (0R5 – 100K).

This high power density resistor is made from quality materials for optimum reliability and stability with very low partial discharge.

Tyco Electronics Components can test resistors to conform to relevant international, MIL or customer specifications, and will advise on the use of resistors for pulse applications (special pulse duty options available) and high voltage usage (high voltage designs available). The BDS600 offers a limiting element voltage of 5kVac rms, and 10kV isolation voltage (terminal to heatsink).

Resistors with 1% tolerance, alternative terminations or flying leads are available, and custom designs are welcome.

This product is available via distribution.

Key Features

- **600W in a 34.2cm² footprint**
  - **Gives an impressive power density of 17.5W/cm²**
- **Inductance < 80nH**
  - **Virtually inductance-free**
- **Wide resistance range: 0.5Ω to 100kΩ**
  - **Coupled with 1% tolerance gives ultimate design flexibility**
- **Multiple terminal configurations**
  - **For demanding creep and clearance requirements**
- **Partial discharge <5pC at 5kV**
  - **Guaranteeing quality, reliability and long life**

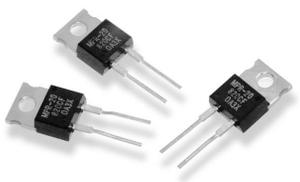
Type MPR Series



This small size non-inductive, high power resistor is an innovative and significant first for Tyco Electronics Components. Occupying a standard T0220 package it is ideally suited to positions where high power dissipation, small size and tight tolerance are key design requirements.

This series is an ideal solution for the output side of high speed pulse generators, a surge absorption resistor in switch mode power supplies and for monitors, display terminals, scientific workstations and other brown and white goods.

Key Features

- **Small Size (T0220 Package)**
- **Easy to Mount**
- **Non Inductive**
- **High Frequency Range up to 300MHz**
- **Temperature Range -55°C to +155°C**
- **High Power 20W with Suitable Heatsink**
- **Voltage Proof 2000V ac**
- **Non Flammable**

Characteristics - Electrical

Resistance Range:	R22 - 51K
Resistance Tolerance:	E12 ± 5% E24 ± 1%
Temperature Coefficient of Resistance:	10R - 51K - 50ppm/°C (1% / 5%), 1R0 - 9R1 - 100ppm/°C (5%), R22 - R91 - 250ppm/°C (5%)
Rated Power (on Suitable Heatsink):	20 watts
Rated Power (W/O Heatsink):	2 watts
Equivalent Parallel Capacitance:	1.0 pF
Maximum Operating Voltage:	500 V dc
Withstand Voltage:	2000 V dc (Between terminals and heatsink)
Operating Temperature Range:	-55°C to +155°C
Rated Ambient Temperature:	-25°C to +40°C

Mechanical

	Test Condition	Specification
Life (Rated Power):	40°C, rated power, 90 min-on, 30 min off, 1000 hours	ΔR ± (1.0% + 0.05 ohm)
Life (Moisture Load):	60°C, 90 - 95% RH, rated power, 90 min ON 30 min OFF, 1000 hours	ΔR ± (1.0% + 0.05 ohm)
Temperature Cycling:	Room temp > -55°C 30 min > RT, 10 min ± 120°C 30 min > RT 10 min, 5 cycles	ΔR ± (0.25% + 0.05 ohm)
Short Time Overload:	Rated voltage x 2.5, 5sec	ΔR ± (0.25% + 0.05 ohm)
Soldering Heat:	350°C solder pot, 3sec	ΔR ± (1.0% + 0.05 ohm)
Insulation Resistance:	DC 100 V, 1 min	Over 1000M ohm
Vibration:	10 - 50 Hz, 1 min, 20G, X-Y-Z 1 hour	ΔR ± (0.5% + 0.05 ohm)

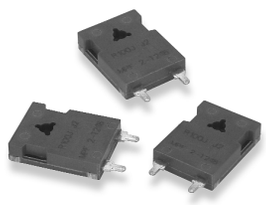
Type MPF Series



This small non-inductive, high power resistor is another innovative product available from Tyco Electronics Components. Housed in a standard T0218 package it is ideally suited to positions where high power dissipation, small size and tight tolerance are key design requirements. Available with metal alloy or thick film elements, most standard resistance values and tolerances can be achieved. This series is ideally suited for the output stage of high speed pulse generators, a surge absorption resistor in switch mode power supplies and for monitors, display terminals, scientific work-stations and low ohmic current sense positions.

Key Features

- Small Size (T0218 Package)
- Easy to Mount
- Non Inductive
- High Power - 30W
- Temperature Coefficient down to 10ppm/°C
- Tolerances from 0.2%
- Values down to R002
- Non Flammable

Characteristics - Electrical

Resistance Range:	R002 – 50R in E12 Series
Resistance Tolerance:	
From R002	1%, 2%, 5%
From R01	0.5%, 1%, 2%, 5%
From R02	0.25%, 0.5%, 1%, 2%, 5%

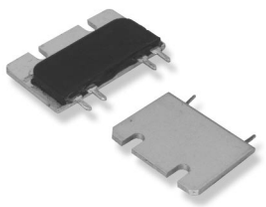
Type MPH Series



The MPH resistor complements the MPX Series by adding an even higher power rating. With this, user in the area of low ohmic precision can add a 50W device when mounted on a suitable heatsink. By using metal foil on a good heatsink high stability is achieved. Uniform current and power dissipation are the result of tin plated copper terminations with a large surface area. Because of the planar construction the MPH resistor is also non-inductive. The materials used and robust construction guarantee high reliability. The 4 terminal version (Kelvin terminations) can be used where high stability, temperature stability and thermal energy are required.

Key Features

- **50 Watt High Power Dissipation**
- **Extremely Low Ohmic Values**
- **Low Inductance**
- **High Stability**
- **Kelvin Terminations**
- **Low TCR**

Characteristics - Electrical

Type R5000 Series

The R5000 Resistor Series by Tyco Electronics Components is a high specification flat resistor module with flying leads, designed for braking and snubbing applications where size and weight are at a premium.
With a height of 13mm, an overall weight of 150g, and a rated power of 250W, this resistor offers unbeatable performance in terms of power density.
Advanced construction methods and high performance materials give a rugged and resilient device capable of high pulse energy absorption, low inductance, high stability, and a low TCR.
This device can be fused to offer circuit protection and is available in a wide range of resistance values.
Tyco Electronics Components can test resistors to conform to relevant international, MIL or customer specifications, and are happy to advise on the use of resistors for pulse and high voltage applications.

Key Features

- **250W in a 77cm² Footprint**
  - **Exceptional power density of 3.25W/cm²**
- **13mm Overall Height**
  - **Fits where other resistors cannot**
- **Special Fuse Option Available**
  - **Circuit protection offers improved reliability and safety.**
- **Low Inductance for the Fastest Switching Speeds**
  - **Less than 1µH for resistances below 20Ω**
- **Durability with no Weight Penalty**
  - **High quality aluminium construction weighs just 150g**

Applications

- **Braking**
- **Snubbing**
- **Filter**
- **Power Supplies**
- **Electrical Machinery**

Characteristics - Electrical

Dissipation @ 20°C with Heatsink (Watts):	250
Ohmic Value - Foil (Ohms):	R05 – 20R
Wire Wound (Ohms):	10R – 10K
Tolerance:	± 10%
Limiting Element Voltage (DC/ACrms) Volts:	500V DC or AC Peak
Dielectric Strength (AC peak) Volts:	500V (Can be Uprated)
Inductance - Foil Element (Henries):	<1 µH
Capacitance (F):	440pF
TCR (ppm/°C):	20 ppm/°C - 150 ppm/°C (to design)
Stability (1000h/250W):	ΔR < 5%
Terminal Strength:	5kg Pull Strength
Temperature Range:	-50°C to 125°C
Humidity (Si-Sealed option):	96% RH @ 40°C - 56days. ΔR <1%
Weight (g):	145
Orientation:	Vertical
Number of Mounting Holes:	2
Cable Length:	130mm ± 10mm
Heat Dissipation:	Although the use of proprietary heat sinks with lower thermal resistance is acceptable, up rating is not recommended. The use of proprietary heat sink compound to improve thermal conductivity is essential.

High Power Resistors

Product Overview

Tyco Electronics has been manufacturing its CGS brand of power resistors for over 50 years.

We offer one of the widest ranges of high power resistor styles and technologies in the world; including thick film, Wirewound and foil. Within these technologies we offer standard ranges of resistors for both low and high ohmic requirements and wattages up to 2200 watts with operating voltages up to 12kV. We offer low inductive versions, a variety of tolerances and temperature coefficients and numerous mounting options.

Our designers specify only the best materials to achieve high quality and long term stability. Our in-house test facility ensures that all products meet our own rigorous test programmes.

We specialise in customisation of the high power resistor range and have a first rate design team based in our R & D facility at Swindon, Wiltshire.

- Market leader in high power technology
- Standard and Custom Designs Available
- Wide range of technologies
- Diverse market applications
- High reliability materials
- In house test facility
- Highly qualified and experienced design team

Type HPV Series

Tyco Electronics Components is the leading European supplier of standard and custom designed aluminium housed resistors for general-purpose use, power supplies, power generation and the traction industry.
The HPV is a range of extremely stable, high quality wire wound resistors capable of dissipating high power in a limited space with relatively low surface temperatures. The power is rapidly dissipated as heat through the aluminium housing to a specified heat sink. The element assembly is housed within an aluminium extrusion and is insulated by a mineral material, providing better pulse handling capabilities. The HPV resistors have been designed for the power generation industry but are increasingly finding applications in locomotive and other industrial markets where high power, long life and exacting pulse requirements are key design parameters.
The resistors are made from quality materials for optimum reliability and stability. Tyco Electronics Components can test resistors to conform to relevant international, MIL or customer specifications.
Tyco Electronics Components is happy to advise on the use of resistors for pulse applications and to supply information for high voltage use and low-ohmic value and alternative termination types.

Key Features

- **Up to 1000W power dissipation**
  - **Use a single resistor in applications where multiples were used before**
- **High pulse energy absorption**
  - **Mineral filled to handle up to 7000joules**
- **6.5kV voltage isolation**
  - **Meets tough specifications with a factor of safety**
- **Proven reliability**
  - **1000Watts with HS reliability**
- **Custom designs: Windings, terminations**
  - **We have a solution for your application**

Characteristics - Electrical

		HPV500	HPV1000
Dissipation @ 25°C with Heatsink (Watts) (Maximum continuous):		500	1000
Without Heatsink:		100	200
Ohmic Value Min (Ohms):		0R5	1R0
Max:		33K	50K
Limiting Element Voltage (Volts) (DC/AC rms) (For continuous operation):		2.5kV	2.5kV
Dielectric Strength (Volts) (AC rms):		6.5kV	6.5kV
Pulsed Voltage (Volts) (1.2/50ms):		12kV	12kV
Insulation Resistance @ 500V (Ohms>10GΩ):		>10GΩ	
Stability (% resistance change, 1000 hours)(%):		≤ 2%	≤ 2%
Temperature Coefficient (ppm/°C):		<±100ppm/°C	<±100ppm/°C
Environmental Category:		-55/200/56	-55/200/56
Creep (mm):		43Min	43Min
Clearance (mm):		20Min	20Min
Long Term Stability:	For improvements in long-term stability, resistors must be derated as follows; for 50% of stated ΔR maximum dissipation must not exceed 70% of rating; for 25% of stated ΔR maximum, dissipation must not exceed 50% of rating.		
Heat Dissipation:	Although the use of proprietary heat sinks with lower thermal resistance is acceptable, up rating is not recommended. The use of proprietary heat sink compound to improve thermal conductivity is essential.

Type R3000 Series

Tyco Electronics Components is the leading European supplier of standard and custom mineral insulated resistors for high voltage snubbing applications.
The R3000 range is designed to meet the demands of high voltage switching applications and offers extremely stable, high quality wire wound resistors capable of dissipating high power in a limited space with relatively low surface temperature. The power is rapidly dissipated as heat through the aluminium housing to a specified heatsink.
The resistors are made from quality materials for optimum reliability and stability. Tyco Electronics Components can test resistors to conform to relevant customer specifications.
Tyco Electronics Components is happy to advise on the use of resistors for pulse applications and to supply information for high voltage use and low-ohmic value, alternative mountings and termination type.

Key Features

- **1000W in a 150cm² Footprint**
  - **Exceptional power density of 6.7 W/cm²**
- **Partial Discharge < 5pC at 3.7kV RMS**
  - **Giving quality, reliability and long life**
- **12kV Voltage Isolation**
  - **Meeting tough specifications with a factor of safety**
- **Special Pulse Options Available**
  - **Maximised wire wound element technology for high pulse energy absorption**
- **Low Inductance and Capacitance**
  - **For the fastest switching speeds**
- **Unparalleled Insulation Resistance**
  - **50GΩ offers high performance in every application**

Characteristics - Electrical

Dissipation on 75°C Heatsink (Watts):	1000 (500 per element)
Without Heatsink ($T_{ambient}$: 23°C):	200 (100 per element)

Type CJS Series

Tyco Electronics Components is the leading European supplier of standard and custom designed mineral insulated resistors for general-purpose, drives and controls.

The CJS mineral filled power resistor in durable aluminium housing offers high performance as a braking resistor for large drives.

The high overload rating enables the absorption of high-energy pulses with a compact device.

A variety of terminations are available to meet customer requirements including Faston, terminals, butt splices etc.

Key Features

- **High Power Dissipation**
  - **Up to 1000W with a heatsink, and 525W without**
- **Unsurpassed Pulse Capability**
  - **Large active element can absorb 18kJ**
- **High Voltage Withstand**
  - **Reliability at 3kV**
- **High Stability**
  - **Specify the CJS with complete confidence**
- **10 Times Overload Rating**
  - **A compact and cost effective solution**

Applications

Type CJR Series

The CJR range of power resistors are aluminium housed and wire wound, designed to withstand high adiabatic pulses in a compact package. These devices offer a high power dissipation capacity with the appropriate heat sink and superior environmental protection (IP64). The product is silicone free for specific use on assembly cells within the automotive assembly industry.

Key Features

- **High Power Dissipation**
  - **1000W in a 15mm package**
- **Low Profile**
  - **Fits where other resistors cannot**
- **IP64 Environmental Protection**
  - **World-wide use in any industry**
- **High Pulse Capability**
  - **Fits today's dynamic breaking requirements**
- **Overload 20 Times Rated Power**
  - **A compact and cost effective solution**
- **Silicone-Free**
  - **Designed for automotive assembly lines**

Applications

- **Braking**
- **Capacitor Charging & Discharging**
- **Crowbar**
- **Filter**
- **Power Supplies**
- **Electrical Machinery**
- **Robotics**

Type HS600 Series

Tyco Electronics Components is the leading European supplier of standard and custom designed aluminium housed resistors for general-purpose use, power supplies, power generation and the traction industry.
The HS600 resistor is based on the proven HSC300 power resistor, offering double the power capacity when cooled by liquid flowing through a coil encased in the cast aluminium body.
Water-cooling enables high power dissipation in a very small envelope as no heatsink is required. The use of proven HS technology ensures reliability and stability.
The resistors are made from quality materials for optimum reliability and stability. Tyco Electronics Components can test resistors to conform to relevant international, MIL or customer specifications.
Tyco Electronics Components is happy to advise on the use of resistors for pulse applications and to supply information for high voltage use and low-ohmic value, alternative mountings and termination type.

Key Features

- **600W Power Dissipation**
  - **Direct water cooling eliminates the cost, weight and size penalty of heatsinking**
- **Established Product with Proven Reliability**
  - **Leading the field with over 40 years of manufacture**
- **No Need for Deionised Water**
  - **Mixing water and high voltage safely**
- **10000MΩ Insulation Resistance**
  - **You won't need higher**
- **Horizontal or Vertical Mounting**
  - **For flexible designs at high power density**

Characteristics - Electrical

Dissipation at 25°C (Watts):	600W
Ohimic Value - Min (Ohms):	0R6
Max:	62K
Maximum Working Voltage - DC/ACrms (Volts):	2.5 KV
Dielectric Strength - AC peak (Volts):	3.5KV
Mounting Style:	Vertically or Horizontally
Number of Mounting Holes:	3
Weight:	1.25 kg
Creep Path:	20mm min
Coolant Liquid Flow:	>0.8l/m
Pressure Drop:	>0.4 atm
Coolant Temperature:	<56°C
Long-Term Stability:	For improvements in long-term stability, resistors must be derated as follows; for 50% of stated ΔR maximum dissipation must not exceed 70% of rating; for 25% of stated ΔR maximum, dissipation must not exceed 50% of rating.
Insulation Resistance:	Dry: 10,000MΩ minimum. After moisture test: 1000MΩ minimum.
Specification:	Temperature coefficient below 100R, 50ppm/°C Temperature coefficient above 100R, 30ppm/°C Tolerance, 5% standard: 10%, 3%, 2%, & 1% available.

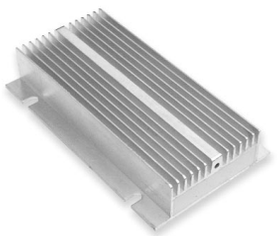
Type CFH Series



The CFH high quality range of aluminium housed power resistors offers environmental protection to IP55, 6kV dielectric strength, 1.8kW power dissipation, and the ability to absorb electrical pulses of up to 24kJ.
The use of advanced materials in the construction of this device enables operating temperatures of up to 450ºC giving very high power density.

Key Features

- **2200W in a 72cm² footprint**
  - **Unparalleled power density of 31W/cm²**
- **Impressive Pulse Capability**
  - **Large active element can absorb up to 24kJ**
- **No Heatsink Required**
  - **Dissipates up to 950W in free air**
- **Slimline Casing**
  - **30mm casing height for design flexibility**
- **Environmental Protection to IP55**
  - **Reliable in the harshest conditions**

Applications

- **Braking**
- **Balancing**
- **Capacitor Charging & Discharging**
- **Crowbar**

Type BDS600 Series

Type BDS600 Series

With a maximum inductance of 80µH and a rated power of 600W (60°C Heatsink) in a 57mm x 60mm casing, the BDS600 offers high power density over a wide range of ohmic values (0R5 – 100K).

This high power density resistor is made from quality materials for optimum reliability and stability with very low partial discharge.

Tyco Electronics Components can test resistors to conform to relevant international, MIL or customer specifications, and will advise on the use of resistors for pulse applications (special pulse duty options available) and high voltage usage (high voltage designs available). The BDS600 offers a limiting element voltage of 5kVac rms, and 10kV isolation voltage (terminal to heatsink).

Resistors with 1% tolerance, alternative terminations or flying leads are available, and custom designs are welcome.

This product is available via distribution.

Key Features

- **600W in a 34.2cm² footprint**
  - **Gives an impressive power density of 17.5W/cm²**
- **Inductance < 80nH**
  - **Virtually inductance-free**
- **Wide resistance range: 0.5Ω to 100kΩ**
  - **Coupled with 1% tolerance gives ultimate design flexibility**
- **Multiple terminal configurations**
  - **For demanding creep and clearance requirements**
- **Partial discharge <5pC at 5kV**
  - **Guaranteeing quality, reliability and long life**

Characteristics - Electrical

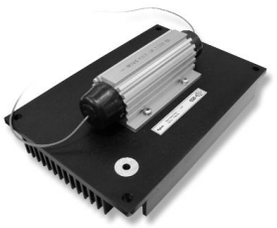
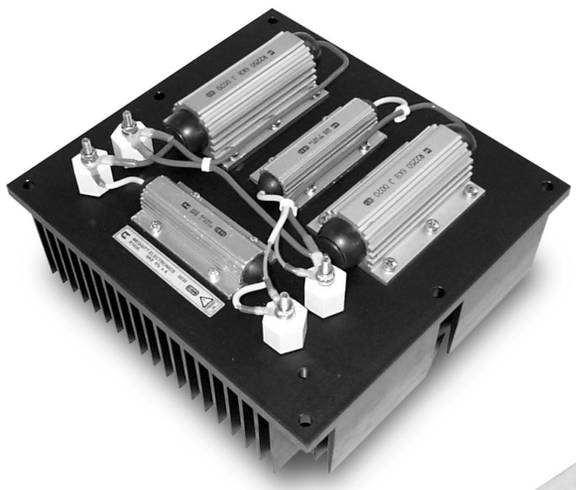
Bespoke Solutions

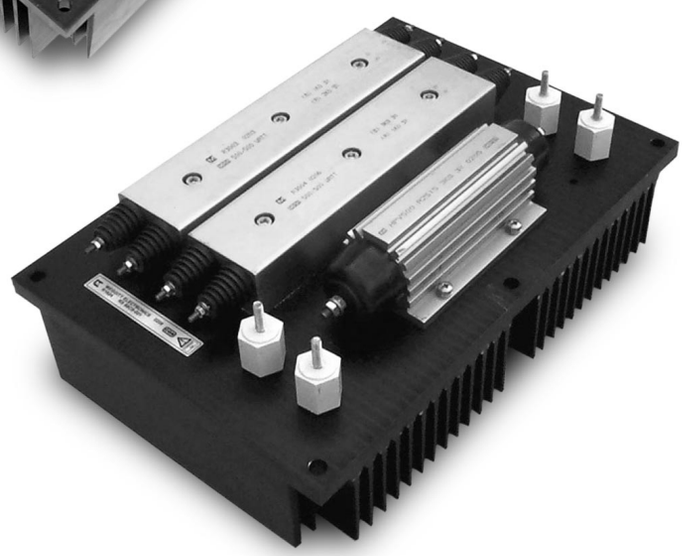


Tyco Electronics Components is pleased to offer customers the opportunity to specify resistor/heatsink assemblies to meet the most demanding applications. With the assistance of our Engineering team, you can create the optimum solution to suit your application. Our fully assembled, 'drop-in' assemblies give you complete flexibility to select resistors, heatsink type, cables, terminal posts, fixings and connectors to meet your own specification.

Key Features

- **Bespoke Solution**
  - **Can be treated as a component not an assembly**
- **Engineered From Specification to Completion**
  - **We turn your specification into a drop-in solution**
- **Complete Flexibility**
  - **A wide range of resistors, heatsinks, terminal posts, fixings, wiring harnesses and connectors to suit every application**
- **Convection or Water Cooling**
  - **Designed to meet your performance and cost requirements**
- **Reduce Cabinet Temperature for End-User**
  - **Increases component life and system reliability**





Applications

- **Rail**
- **Marine**
- **Power Transmission and Distribution**
- **Electrical Machinery**
- **Capacitor Charging and Discharging**
- **Crowbar**
- **Filter**
- **Braking**

Customisation Cabability

As a leading manufacturer of resistive products, Tyco Electronics serves a wide range of sectors with both standard and custom-designed solutions. Products are designed to meet demanding environmental, safety and cost criteria. Core markets include industrial machinery, transportation, marine, aerospace, electrical appliances, automotive and commercial.

Tyco Electronics' custom capability includes bespoke product developments as well as product modifications. Our experienced design teams work closely with our customers' engineering personnel to design advanced products that meet their exact requirements. The complete process from design to product delivery is completed to agreed timescales and budgets.

Materials used are of the highest quality and selected for optimum stability and reliability. Manufacturing processes include thick film, thin film, wire-wound and foil technology. Core processes can be adapted to achieve low or high resistive values. Examples of recent product developments include a combination of unique thick film and wire-wound resistors used in the propulsion system of the new generation destroyer, and a specially designed braking resistor used in the actuation system of fly by wire airliners.

Standard products are available in numerous styles and technologies and offer complete flexibility - including mechanical customisation for heatsinks, terminal posts, fixings, wiring harnesses and connectors. The base technology and materials can be adapted to suit any specific electrical requirements such as reduced temperature co-efficient, close tolerances, high voltage requirements, overload and adiabatic demands within space and internal temperature constraints.

The customisation and development programme also includes in-house product testing in our own R & D laboratory. The range of tests can be designed in conjunction with customer specifications to include cyclic rated power and overload testing, adiabatic (single shot and frequency) testing, environmental, mechanical and repetitive pulse testing. Qualification testing is carried out to a proven procedure and the product development stages are well documented and approved by a design approval team.

As part of our design services Tyco Electronics works with customers at their own premises to compare test results and calibrate equipment to achieve equal results. 3D visualisation of the end product is available so that our customer and our design team have a full understanding from very early on in the project, what the final product will look like.

Last but not least, Tyco Electronics offers a variety of packaging options as well as special cases and configurations. Options on cooling systems, custom lead formations, matched resistance solutions, custom windings and foil technology in stamped or etched solutions are available. We can also provide a variety of product insulations and coatings for a range of ceramic cores in rods, tubes or flat substrates.

Our design team is waiting for the opportunity to discuss your specifications and provide you with prompt, cost effective solutions to meet your ever changing business needs.

High Voltage Resistors

Product Overview

Tyco Electronics has been manufacturing its CGS brand of power resistors for over 50 years.

We have an extensive range of high voltage products in power ratings from 0.25 watt to 100 watt and with operating voltages up to 50kV. Ohmic values start from as low as 10 milliohms and reach 10 Gigaohms in certain ranges.

Our choice of technology includes thick film and Wirewound products. Our extensive standard range can be customised to include housings, leads, cables, terminations and they can be packaged into special cases and configurations.

All our products are tested at our in-house facility to ensure long term stability and endurance and adherence to our own rigorous specifications.

- High Voltage Withstand
- High Surge Energy Rating
- Wide Resistivity Range
- Extensive range of wattages
- Custom Design Solutions Available
- Wide range of Technologies
- In House Test Facility
- Highly qualified and experienced design team
- Compact sizes available
- Brand name CGS

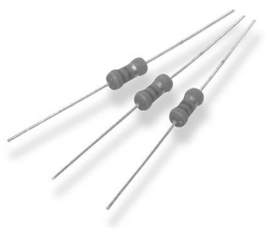
Type HMG Series



The Tyco Electronics Components Type HMG resistor is suited to applications requiring small size, high voltage, high impedance and high stability. Consistent quality and reliability is achieved via a metal film deposition on a high purity ceramic core. Multi layer epoxy coating offers excellent environmental protection.

The HMG Series is attractively priced and particularly well suited to use as voltage dividers, in X ray equipment, and in high voltage power supplies.

Key Features

- Small Dimensions
- High Power-Size Ratio
- Values up to 500 Meg
- Flameproof Construction
- Temperature Coefficient 100ppm/°C or 250ppm/°C
- All Product Bandoliered

Type RGP Series

Metal glaze resistors are manufactured using thick film techniques. The ceramic slugs have the thick film applied, the film is fired and end caps are forced onto the slugs, the resistive element is spiralled to value and lead wires are welded onto the end caps. Four layers of coating are applied - the first being a phenolic resin, the other three being epoxy.

Key Features

- **The thick film is suitable for the manufacture of very high resistance values and for high voltage working components.**
- **The combination of high values and high working voltage makes these components ideally suited for such applications as TVs, electrical measuring equipment etc..**
- **Thick film metal glaze series for high ohmic values and high voltage surge rating with a range up to 10 Gohm.**
- **Product Supplied in Ammo Packs**
- **Legend Marked***

Type HJ Series

Type HJ Series

The HJ type resistors have higher reliability when they are mounted on board, and excellent long term stability.

These are used mainly in semi- conductor equipments, X-ray apparatus, and many other measuring instruments.

Key Features

- **Low TCR's**
- **Close Resistance Tolerances**
- **Small compact size**
- **High Reliability**
- **Excellent long-term stability**
- **High resistance to pulse voltages**
- **Special Coatings for High Humidity**
- **High thermal shock resistance when mounted to PCB**

Characteristics - Electrical

Type HH Series

The HH type resistors offer a very stable high voltage resistor in a compact package with excellent pulse withstand capability.

These are used mainly in physical and chemical measuring instruments, X-ray apparatus, electron microscopes and other high voltage industrial applications.

Key Features

- Low TCR's
- Low Resistance Tolerances
- Small compact size
- Up to 6 Watts Dissipation
- High Reliability
- Excellent long-term stability
- High resistance to pulse voltages
- High thermal shock resistance when mounted to PCB
- Power derates to zero at 150°C

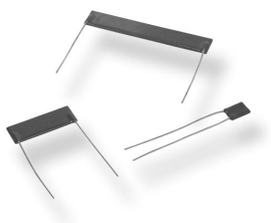
Type HB Series



Tyco Electronics Components is a leading European supplier of standard and custom designed high value/high voltage resistors for high voltage, industrial, control, medical and general-purpose use.
The HB is a tough epoxy coated high voltage resistor, with axial or radial leads, values up to 1G Ohm and an operational voltage to 20kV as standard and 30kV to order.
The resistors are made from quality materials for optimum reliability and stability. Tyco Electronics Components can test resistors to conform to relevant international, MIL or customer specifications.
Tyco Electronics Components is happy to advise on the use of resistors for high frequency applications and to supply information for high voltage use.

Key Features

- **Up to 15kV Element Voltage**
  - **Unique specification for the most demanding applications**
- **High Ratio of Size to Power**
  - **The solution to your PCB population problems**
- **Wide resistance range: 1KΩ to 1GΩ**
  - **Coupled with 1% tolerance gives ultimate design flexibility**
- **Established Product with Proven Reliability**
- **Low Inductance**
  - **For the fastest switching speeds**

Applications

- **High Voltage**
- **Voltage Divider**
- **Surge**
- **Filter**
- **Balancing**
- **Inrush Limiting**

Type HVR Series

Tyco Electronics Components is a leading European supplier of high specification power resistors for specialist applications.The HVR range consists of high power, high voltage resistors capable of operating up to 50kV (continuous) and dissipating 50W in air or 100W oil. The thick film resistor element is designed to minimise inductance and capacitance giving optimum performance at MHz frequencies, and resistance to high voltage surges.

The resistors are made from quality materials for optimum reliability and stability. Tyco Electronics Components can test resistors to conform to relevant international, MIL or customer specifications.

Tyco Electronics Components is happy to advise on the use of resistors for pulse applications and to supply information for high voltage use and low-ohmic value, alternative mountings and termination type.

Key Features

- **Highly Versatile Product**
  - **Resistance values from 2kΩ to 1GΩ and a range of mounting options**
- **50 kV Continuous Operating Voltage**
  - **Unique specification for the most demanding applications**
- **Low Inductance and Capacitance**
  - **For high frequency applications into the MHz range**

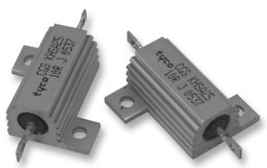
Type KHSA Series



Tyco Electronics Components is the leading European supplier of standard and custom designed aluminium housed resistors for general-purpose use, power supplies, power generation and the traction industry.
The KHSA range of extremely stable, high quality wire wound resistors is capable of dissipating high power in a limited space with relatively low surface temperature. The power is rapidly dissipated as heat through the aluminium housing to a specified heat sink. The KHSA offers increased dielectric strength over the standard range of HS resistors.
The resistors are made from quality materials for optimum reliability and stability. Tyco Electronics Components can test resistors to conform to relevant international, MIL or customer specifications.
Tyco Electronics Components are happy to advise on the use of resistors for pulse applications and to supply information for high voltage use and low-ohmic value, alternative mountings and termination type.

Key Features

- **Increased Dielectric Strength**
  - **High voltage performance up to 1.25kV**
- **Wide Resistance range: 0.01Ω– 100kΩ**
  - **Coupled with 1% tolerance gives ultimate design flexibility**
- **Broad Range of Options and Custom Design Capability**
  - **The solution for your application**
- **Proven Reliability at a competitive price**
  - **Benefits from over 50 years of HS resistor design and manufacture**

Characteristics - Electrical

	KHSA25	KHSA50
Dissipation @ 25°C with Heatsink (Watts):	25	50
Without Heatsink:	12.5	25
Ohmic Value Min (Ohms):	R01	R01
Max:	36K	100K
Maximum Working Voltage (DC or ACrms) Volts:	550V	1250V
Dielectric Strength (AC peak) Volts:	3.5kV	3.5kV
Insulation Resistance @ 500V (Ohms):	>10GΩ	>10GΩ
Stability (% resistance change, 1000 hours) (%):	≤ 2%	≤ 2%
Temperature Coefficient ppm/°C:	<±50ppm/°C	<±50ppm/°C
Environmental Category:	-55/200/56	-55/200/56

Long Term Stability:	For improvements in long-term stability, resistors must be derated as follows;
	for 50% of stated ΔR maximum dissipation must not exceed 70% of rating;
	for 25% of stated ΔR maximum, dissipation must not exceed 50% of rating
Insulation Resistance:	Dry: 10GΩ minimum. After moisture test: 1GΩ minimum.
Heat Dissipation:	Although the use of proprietary heat sinks with lower thermal resistance is acceptable, up rating is not recommended.
	The use of proprietary heat sink compound to improve thermal conductivity is recommended for optimum performance
Specification:	Temperature coefficient below 100R, 50ppm/°C
	Temperature coefficient above 100R, 30ppm/°C
	Tolerance, 5% standard: 10%, 3%, 2%, 0.5% & 0.25% available
	Tolerance for values below R10, 10% standard

Fusible Resistors

Product Overview

The CGS and Neohm ranges of Fusible Resistors are designed to provide protection in safety critical and circuit protection applications.

Available in leaded and surface mount technology with permissible power rating to 10W, these devices use technologies in Film and Wirewound to give uniform fusing times. With completely flameproof construction the products are suitable for many applications.

- Surface Mount products down to 0805 size
- Power ratings to 10W
- Operating temperatures to 275°C
- High surge/overload capability
- Solvent resistant coatings
- Excellent long term stability

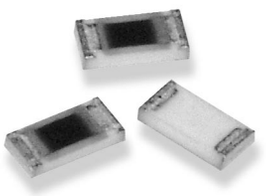
Type FCR Series



Precious metal terminations are screen printed onto a ceramic base and fired. The resistive element is screen printed and fired and the passivation layer added. Each resistor is trimmed to tolerance by sand blasting. The prescribed tile is broken into strips, the end plating is fired on and the strips broken into individual components. Final termination is made by electroplating.

Key Features

- **Chip resistors with known fusible characteristics. These resistors will not produce flames or smoke during fusing.**
- **Suitable for battery operated circuits.**
- **Case sizes 0805, 1206 and 2010.**
- **FCR chip resistors are suitable for most applications, including high frequency operation.**

Type FCR Series (continued)

Mounting

The resistors are suitable for processing on automatic insertion equipment.

Marking

E24 series resistors are marked with a three digit code.

Packaging

All chip resistors are supplied on reels of 2000 or 5000 pieces.

Performance Characteristics

The evaluation of the performance characteristics is carried out with reference to IEC Specifications QC 400 000 and QC 400 600.

TEST REF	Tests	Test Requirements
4.24	Damp heat, steady state	±5%
4.25.1	Endurance at 70°C	0805 ±10% 1206, 2010 ±5%

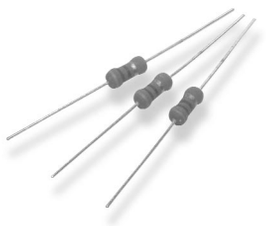
Type FRN Series



The resistive element comprises a resistive film sputtered onto a ceramic element. Metal end caps are force fitted to the element prior to spiralling. Tinned copper lead wires are welded to the end caps and the components are then coated with four layers of a flame-proof cement. All resistors are tested for value and tolerance. The technology allows the manufacture of custom fusible characteristics.

Key Features

- **Superior quality resistors with fusing characteristics for overload conditions.**
- **Flame-proof during fusing.**
- **Ideal for use in safety-critical and circuit protection applications.**
- **These resistors fuse in less than 60 seconds at 16 times rated power. (See table)**
- **This series is UL approved.**

Type FKN Series

Type FKN Series

There are some similarities between resistors and fuses in material and structure. Fusible Resistors perform both functions, as a resistor in normal conditions and as a fuse when abnormal currents are applied, so as to protect machinery and equipment. Cost savings are apparent as one component is eliminated.

The FKN Fusible Resistor series is produced with precision techniques, enabling precise and stable fusing times.

Key Features

- Protects Circuit Boards & Designs
- Small Size, Competitive Price
- Excellent Long Term Stability
- Complete Flame Proof Construction
- Solvent Proof
- Resistant to High Temperature
- Low Temperature Coefficient
- Uniform in Fusing Time

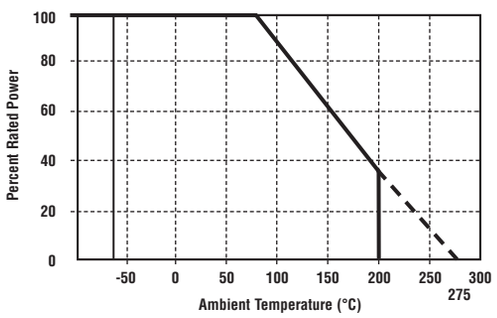
Characteristics - Electrical

Operating Temperature (°C):	-55 to +275
Resistance Temperature Coefficient (°C):	-30 to +150 ±300ppm/°C
Short Time Overload:	2.5 times of rated voltage for 5 seconds ΔR < ±2%
Insulation Resistance:	500V Megger - 1000Mohms
Temperature Cycle (°C):	-30 to +85 for 5 cycles ΔR < ±1%
Load Life:	70°C on-off cycle 1000 hours ΔR < ±5%
Moisture-Proof Load Life:	40°C 95% RH on-off cycle 1000 hours ΔR < ±5%
Solder Pot:	270°C for 3 seconds ΔR < ±1%
Incombustability:	16 times of rated wattage for 5 minutes - Not Flamed
Maximum Working Voltage:	500V

Fusing Characteristics

Fusing times can be decided by consultation with our design team to meet application requirements.

Derating Curve



For resistors operated in ambient temperatures above 70°C, power rating must be derated in accordance with this curve.

General Purpose Resistors

Product Overview

These resistors from the Neohm, CGS and Citec brands have a wide range of applications and technologies. General purpose resistors are used in many electrical and electronic applications.
The resistors encompass many different technologies including Thick Film, Metal (Thin) Film, Wirewound, Carbon Film and Metal Oxide.
Ranging from small 0402 size surface mount resistors to larger size axial leaded wirewound resistors, power ratings from 0.063W to 10W are available.
The product range also covers specialist applications such as trimmable resistors, zero ohm links and carbon moulded resistors.

- Surface mount products down to 0402 size
- CCR and CBT series for high pulse applications
- High Ohmic resistors to 100G ohm
- Leaded and SMD resistor networks
- SMD Trimmable resistors
- Zero ohm links in 2 sizes

Type CRG Series

Precious metal terminations are screen printed onto a ceramic base and fired. The resistive element is screen printed and fired and the passivation layer added. Each resistor is trimmed to tolerance by laser. The pre-scribed tile is broken into strips, the end plating is fired on and the strips broken into individual components. Final termination is made by electroplating.

Key Features

- **Thick film resistors with a high power to size ratio, ideally suited to industrial and general purpose use. A range from 1 ohm to 10M and tolerances of 1% and 5%. Also including zero ohm links.**
- **Suitable for most applications, including high frequency operation, owing to the short lead structure and low capacitance.**
- **Six Package Sizes**

Type 3520 Series

Tyco Electronics Components is pleased to introduce this low cost high power device, suitable for auto placement in volume, and for most applications, including high frequency operations, owing to the short lead structure. It is attractively priced and available on 7" reels of 4000 pieces.

Key Features

- 1 Watt at 70°C
- Small Size to Power Ratio
- Supplied on Tape
- Available via Distribution
- Value Marked on Resistor
- 400 Volt Maximum Overload
- 200 Volt Working Voltage
- Laboratory Kit Available
- Low Profile

Characteristics - Electrical

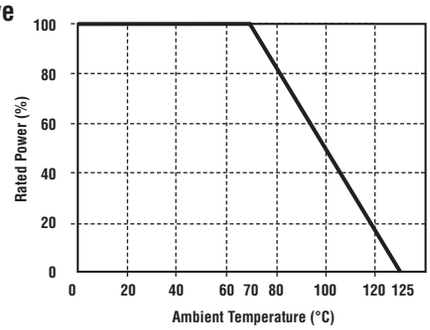
Power Rating:	1 Watt at 70°C**
Max. RCWV*:	200V
Max. Overload Voltage:	400V
Resistance Tolerance(%):	±5%
Resistance Range:	1R0 - 1M0
Temperature Coefficient:	±200ppm ±350ppm**(below 10R)
Resistance Grid Value:	E-24

* Rated continuous working voltage (RCWV) shall be determined from

RCWV = $\sqrt{\text{Rated Power x Resistance Value}}$, or Maximum RCWV listed above, whichever is less

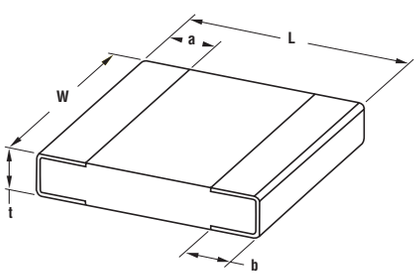
** Recommended Circuit Board Design - If this device is anticipated to run at full continuous power then action to improve the cooling should be taken. This can be a metal substrate, copper pad left under the chip, an opening in the PCB or enlarged silver conductor pads each end.

Power Derating Curve



For resistors operated in ambient temperatures above 70°C, power rating must be derated in accordance with this curve.

Dimensions



L	W	a	b	t
6.40 ±0.20	3.20 ±0.20	0.70 ±0.10	0.70 ±0.20	0.60 ±0.10

Handling Recommendations

When flow soldering - the land width must be smaller than the Chip Resistor width to properly control the solder application. Generally, the land width can be Chip Resistor width (W) x 0.7 to 0.8. When reflow soldering - solder application amount can be adjusted. Thus the land width can be set to W x 1.0 to 1.3.

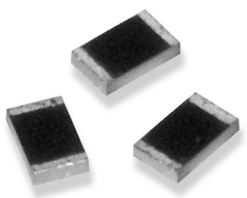
Type RH73 Series



The RH73 Series is a stable high value chip resistor range offering various power dissipation relating to chip size. Tyco Elecronics Components is pleased to offer this innovative range of chip resistors up to 100 Gig. The RH73 series is suitable for flow and reflow soldering. It has a thick film resistor element and three layers of terminal material to ensure high reliability. It is attractively priced and available on 7" reels with 1000 pieces per reel.

Key Features

- Values up to 100 Gig Ohms
- Custom Designs Possible
- Choice of Packages
- Supplied on Reels of 1000
- Wide Tolerances / TCRs
- Available via Distribution
- Power derates to zero at 125°C

Characteristics - Electrical

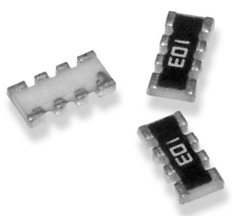
Type MCN Series



The MCN innovative chip resistor network combines a series of inline isolated 0603 resistors into one package. Obvious savings in board space and number of placements are possible by specifying our 4 or 8 resistor packages. The package layer design prevents tombstoning when reflow soldering the chips. Supplied on 8mm tape. The 8 resistor pack is suitable only to large volume applications and utilises thin film technology to achieve the space network density.

Key Features

- Concave and Convex Terminal Style
- Improved Placement Efficiency
- Superior Solderability
- Nickel Barrier Layer
- Up to 8 Isolated Resistors (Thin Film)
- Individually Value Marked

Characteristics - Electrical

Number of Elements:	4 or 8 (x 06.03 size)
Power Rating:	0.063W per resistor (x 06.03 size)
Resistance Range:	10R - 1Meg ohm (E12 values) (8 resistors 10R - 100R Thin Film)
Resistance Tolerance:	±1% ±2% ±5% * Stock is ±5%
Temperature Coefficient of Resistance:	± 250ppm/°C (Down to ± 50ppm/°C possible)
Max. Working Voltage:	50 volts (8 resistors 25 volts)
Operating Temperature Range:	-55°C to +125°C
Maximum Rated Temperature:	+ 70°C

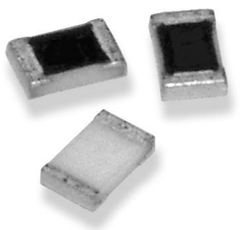
Type TCR Series



Precious metal terminations are screen printed onto a ceramic base and fired. The resistive element is screen printed and fired and the passivation layer added. The pre-scribed tile is broken into strips, the end plating is fired on and the strips broken into individual components. Final termination is made by electroplating.

Key Features

- **TCR chip resistors are suitable for most applications, including high frequency operation, owing to the short lead structure and low capacitance.**
- **The TCR series of chip resistors is designed to be used in circuits where variable resistors might otherwise be used.**
- **The resistance film and the coating have been specified to permit YAG laser trimming.**
- **Case sizes 0805 and 1206.**

Type LR Series

Type LR Series

The resistive element comprises a thin film of nickel-chrome alloy evaporated onto a high thermal conductivity ceramic element. Metal end caps are force fitted to the element prior to spiralling to value. Tinned copper lead wires are welded to the end caps and the components are then coated. One coat of phenolic resin is followed by three coats of epoxy resin. All resistors are tested for value and tolerance.

Key Features

- **Superior quality metal film resistors with 1% tolerance and temperature coefficients down to 50 ppm. 3 case sizes are available in 0.25, 0.6, 0.75W. The LR1L series is a low ohmic value range from 0.1 to 0.82 ohm. Ideally suited where low resistance and small size are required.**
- **Metal film resistors have excellent stability under load and severe environmental conditions. They exhibit very low noise current and voltage coefficients. They are available in a wide range of resistance values and are suitable for general purpose and precision applications.**

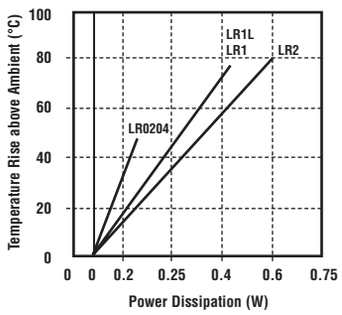
Type LR Series (continued)

Surface Temperature Rise Vs Load



Mounting

The resistors are suitable for processing on automatic insertion equipment and cutting and bending machines.

Marking

The resistors are marked with a colour band code in accordance with JIS C 0802.

Packaging

LR0204, LR1L and LR1 resistors are normally supplied taped in 'ammo' boxes of 4000 pieces. LR2 resistors are normally supplied taped in 'ammo' boxes of 1000 pieces.
Other package styles on request.
All tape specifications are in accordance with IEC 286-1.

Performance Characteristics

The evaluation of the performance characteristics is carried out with reference to IEC Specifications QC 400 000 and QC 400 100.

TEST REF	Long Term Tests ±(1% + 0.05 ohm)
4.23	Climatic sequence
4.24	Damp heat, steady state
4.25.1	Endurance at 70°C
4.25.3	Endurance at 125°C

Type CFR Series

The resistive element comprises a thin film of carbon, deposited onto a high thermal conductivity ceramic core. Metal end caps are force fitted to the element prior to spiralling to value. Tinned copper lead wires are welded to the end caps and the components are then coated. One coat of phenolic resin is followed by three coats of epoxy resin. All resistors are tested for value and tolerance.

Key Features

- **Low cost, combined with high reliability, make these components suitable for use in most types of circuits, including audio, communications, measurement and computer applications.**
- **Premium quality carbon film resistors whose ceramic core has a high alumina content offering power to size ratios not normally associated with carbon film product.**
- **Available in 5 power ratings from 1 ohm to 10 Mohm. The smallest case size (CFR16) has a full 0.25 W power rating.**

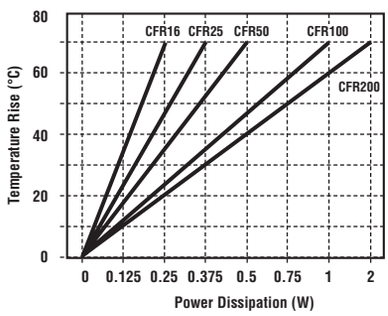
Surface Temperature Rise vs Load



Marking

The resistors are marked with a four colour band code in accordance with IEC 62.

Mounting

The resistors are suitable for processing on automatic insertion equipment and cutting and bending machines.

Packaging

Carbon film resistors are normally supplied taped in 'ammo' boxes. Other styles may be supplied on request.
All tape specifications are in accordance with IEC 286-1.

Type RSSF Series

The resistive element comprises a metal oxide film deposited on a ceramic former. The element is protected by a flameproof coating which will withstand overload conditions without flame or mechanical damage. They are recommended for use in applications such as line protection, automotive. TV's, switch mode power supplies, etc…

Key Features

- High Power with Small Size for Space Saving
- Excellent Long Term Stability
- Complete Flameproof Construction
- High Surge/Overload Capability
- Controlled Temperature Capability
- Solvent Resistant Coat and Code

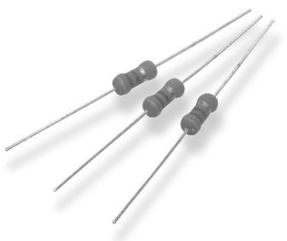
Type RSS Series



Miniature Power Oxide Resistors offer excellent performance in applications where stability and uniformity of characteristics are required. They provide smaller size for PC board application with high performance and precision to replace some wire-wound resistors and other high power resistors. Miniature metal oxide resistors withstand solvents test in accordance with MIL-STD-202E without producing mechanical or electrical damage.

Type ES Series

The ES is a new wirewound resistor from Tyco Electronics Components manufactured to stringent quality control requirements and is an economy sister to the well known Tyco Electronics ER resistor Series. Whilst very slightly larger than the ER resistor and manufactured to a marginally different specification, the ES resistor is suited to volume requirements in power supplies, process control instruments, communication equipment, and other industrial positions. In addition to the ES resistor we offer the practability of a wirewound resistor down to 9.0mm. x 3.00 mm., body size.

Key Features

- High Power to Size Ratio
- Entirely Welded Construction
- 0.5 Watt to 10 Watt Sizes
- Insulation Resistance >1000M
- Completely Flameproof
- Temperature Coefficient 300 ppm
- All Product Bandoliered

Characteristics - Electrical

Resistance Values:	R10 - 3K3 (Other values by agreement/see wattage table below)
Selection Tolerance:	± 5 % (Other tolerances by agreement)
Rated Dissipation @ 20°C:	See Table Below
Dielectric Strength:	500V AC
Insulation Resistance:	1000 M
Short Term Overload Power:	5 times overload 5 seconds
Terminal Strength:	5lb pull Test
Solderability:	Meets MIL - STD - 202
Maximum Operating Temperature:	200°C
Temperature Coefficient of Resistance:	± 300ppm°C

Type ZR Series

The Tyco Electronics Components Series of Zerohm links are available in two standard case sizes and are manufactured by welding tinned copper wire leads directly onto steel slugs. No end caps are used in the production of these devices. This manufacturing process allows for a maximum resistance of 0.002 ohms. The slugs are then finished by applying three coats of light brown epoxy resin.

Key Features

- **Suited to Automatic Insertion**
- **Withstand to 500 Volts**
- **Maximum Resistance 0.002 ohm**
- **Available in Two Case Sizes**

Characteristics - Electrical

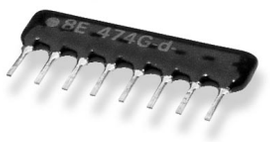
SIL Resistor Networks
(Standard Packages)



Fully automated production techniques, ensure this extensive range offers you consistently high standards of performance and reliability. Tyco Electronics Components can meet all your demands with its range of 4 to 13 resistor elements in common format and 3 to 7 resistor elements in isolated types. The substrate and lead frame provide exceptional strength and the resistors are protected from humidity and thermal shock by a hardwearing, solvent proof black coating. Tyco Electronics Components will also manufacture custom design networks for your special requirements. Please contact our Sales Action Desk for details.

Key Features

- 2% & 5% Tolerances
- Low Price Keeps Production Costs Down
- Solvent Proof Coating
- Very Wide Range
- Low Profile (5.08mm Max.)
- Very Strong Construction
- High Insulation Resistance

Characteristics - Electrical

Resistance Range:	10R to 1M0 (E24 Values)
Resistance Tolerances:	5%, 2%
Maximum Operating Voltage:	100 Volts
Power Rating @ 70°C (Series):	0.125 Watts
(Parallel):	0.200 Watts

Environmental

		Test Method	
	Spec.	**JIS - C - 5202**	**MIL - R - 83401**

Sensing Resistors

Product Overview

Sensing Resistors from the Citec and Neohm brands are used traditionally in temperature compensating circuits and other applications that require a resistance that varies according to ambient temperature.

Offering both negative (NTC) and positive (PTC) temperature coefficients in both surface mount and leaded types these products range from 0402 to 1206 size in surface mount and to 0.25W in a leaded version.
The product range is complemented by special products suitable for detecting moisture and humidity.

- NTC and PTC available
- SMD sizes down to 0402
- Temperature coefficient to 4350ppm
- Operating temperatures to 125°C
- Excellent linearity
- Wide value range
- Special products for detecting moisture and humidity

Max Power Rating Watts	Ohmic Value Range	Highest TCR	Tightest Tolerance	Family	Page

Type 8158 Series

Tyco Electronic Components is pleased to offer this innovative range of Micro Chip Thermistors in 0402, 0603, 0805 and 1206 packages. These specialist Surface Mount N.T.C. devices are available in initial resistances between 40 ohms and 500K ohms, with a tolerance of 5% and a B constant of either 5% or 3%, with10K available in 2% or 1% for 0603 and 0402 packaged devices. This series has a wide operating temperature range, -40°C to +125°C. The individual chip thermistors are not value coded.

Key Features

- **Choice of Packages (0402, 0603, 0805, 1206)**
- **Suitable for Pick and Place**
- **Operating Temperature -40°C to +125°C**
- **Wide Value Range**
- **Embossed Tape on 7" Reels**

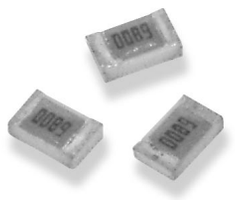
Type LT73 Series



This tiny thin film chip is manufactured by sputtering pure metals onto a high purity alumina base. This process ensures the element remains stable in performance over a long life. The LT73 is equally suited to temperature compensation or thermal protection when incorporated within the appropriate electronics. This range of sensors are finished in a tough epoxy seal and are available on tape for high speed auto placement.

Key Features

- Solvent Resistant Coating
- Wide Value Range
- Excellent Linearity
- 08 05 Small Size
- Stocked in 3900ppm/°C
- Other TCR's Available to Order
- Supplied on Tape and Reel
- Power derates to zero at 125°C

Characteristics - Electrical

	0805 Size (preferred) 2A	1206 Size 2B
Resistance Range:	510R - 3K0	510R - 6K2
Resistance Tolerance:	±5%	±5%
Rated Power at 70°C:	0.1 watt	0.125 watt
Max. Working Voltage @ T_A 70°C:	50 volts	75 volts
Max. Overload Voltage @ T_A 70°C:	100 volts	150 volts
Operating Temperature Range:	-40°C ~ +125°C	-40°C ~ +125°C
TCR Measuring Temperature:	+25°C ~ +75°C (See Graph)	+25°C ~ +75°C (See Graph)
TCR Tolerance:	± 10%	± 10%
Insulation Resistance:	More than 10 Meg	More than 10 Meg

Cleaning

The washing process is very important to ensure long term reliability because ionic impurity from flux may cause electrolytic corrosion of the metal film.

Short time Overload:	Rated Voltage x 2.5 maximum Overload Voltage for 5 seconds, whichever is less
Resistance to Soldering Heat:	260°C ± 5°C, 10 seconds ± 1 second
Solderabililty:	235°C ± 5°C, 3 seconds ± 0.5 second

Typical Performance Graph

Type LT Series

The LT temperature sensing resistors are trimmed to specification on latest equipment. The case construction epoxy coated with axial leads, permits automatic insertion with available tape and reel packaging.

Key Features

- Insulated Package Style
- Positive Temperature Coefficient
- Supplied on Tape for Auto Insertion
- 0.16 Watts or 0.25 Watts Available
- Wide Operating Temperature Range
- Available with Pre Formed Leads

Characteristics - Electrical

	Style 16	Style 14
Resistance Range:	10R to 5K1	10R to 10K
Resistance Values:	E24 Grid	E24 Grid
Resistance Tolerance:	±5%	±5%
T.C.R. Tolerance:	±10%	±10%
Power Rating (Watts):	0.16 Watts at 70°C	0.25 Watts at 70°C
Withstand Voltage:	300V	500V
Short Time Overload:	2.5 x Rated Voltage for 5 Seconds	2.5 x Rated Voltage for 5 Seconds

Environmental

Operating Temperature Range:	-40°C to +125°C
Load Life at 70°C:	±3% +0.05 ohms (after 1000 hours)
Temperature Cycling:	-40°C to +125°C (5 cycles)
Moisture Resistance:	±3% +0.05 ohms (after 1000 hours at 40°C, 95% RH)

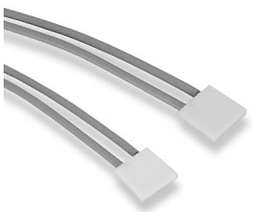
Type HDP Series



The HDP low cost thick film sensor can be used to detect the presence of moisture in a multitude of applications. The HDP sensor can be provided with wire leads and mounted to a carrier plate. This sensor is well established and represents an effective and reliable indicator in sensitive electronic equipment, where excessive moisture could cause catastrophic failure.

Key Features

- Swift Response (Switch)
- Stable Load Life
- Wire Terminations
- Mounting Plate Option
- Range of Applications

Characteristics - Electrical

Rated Voltage:	0.8 volts maximum
Rated Power:	2mW
Operating Temperature Range:	1°C to 60°C
Operating Humidity Range:	0% to 100% RH
Storage Temperature Range:	-40°C to +85°C
Response Speed:	10 seconds to reach minimum 100K

Mechanical

Vibration (10 - 55 Hz):	After 2 minutes x 1.5mm amplitude x,y & z
Lead Wire Strength:	1 Kg applied vertically 10 seconds
Lead Wire Type:	UL1571 AWG # 28

Environmental

Moisture Cycling:	1000 cycles
Temperature Cycling (-40°C to 701°C):	30 minutes each x 5 cycles
High Temperature:	85°C x 1000 hours
Low Temperature:	-40 °C x 1000 hours
Low Humidity (5% RH at 40°C):	1000 hours
High Humidity Load Life (90 - 95% RH, 40°C, 0.8v):	1000 hours

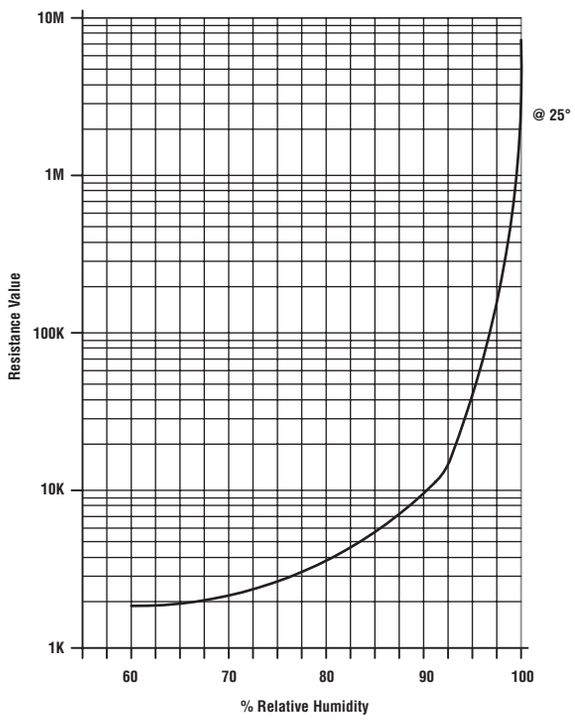
Type HDP Series (continued)

Moisture Response Curve



User Notes

1. Never touch sensor surface. Finger salts will damage sensor. Also prevent adhesives, flux, solder, oil, grease, solvents (all types) and any ionised material, e.g. tap water making contact with sensor.

2. Do not allow smoke, breath or steam to directly impact sensor surface. Clean only with cotton wool buds penetrated by steam if necessary.

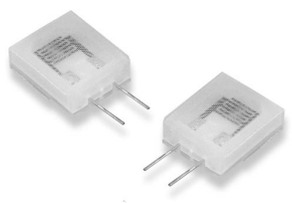
Type HIS Series



This is a high quality, highly responsive polymer film humidity sensor enclosed in a polypropylene moulded case with filter and with the option of pcb pins at 2.5 mm. centres or lead wires subject to consultation with our technical sales group. Attractively priced, this is an excellent resistive sensor which is suited to a wide range of market applications.

Key Features

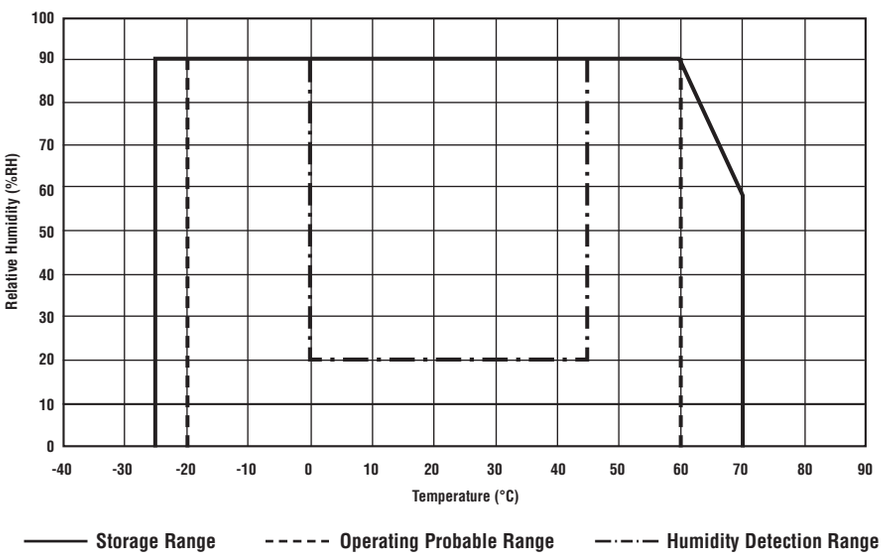
- Highly Responsive
- Humidity Range 20% RH - 90% RH
- Suited to AC Power Supply Only
- Temperature Range -25°C - +60°C
- Custom Connectors Possible
- Robust Construction
- Complete Test Data Available

Characteristics - Electrical

Rated Voltage:	1V AC sine wave (effective value) or square wave of AC 5V
Rated Wattage:	0.3 mW
Operating Temperature Range:	-20°C - +60°C
Operating Humidity Range:	20 ~ 90% RH
Operating Frequency:	50Hz ~ 1kHz
Humidity Response Characteristics:	30% RH to 90% RH
Resistance Value:	45K to 55K ohms (at 25°C, 50 ± 5% RH)

N.B. Sensor must not be subject to 100% RH - Dew Drops

Environment Conditions of Humidity Sensor



Temperature Humidity Characteristics

Temp (°C)	Relative Humidity (%RH)							
	20	30	40	50	60	70	80	90
5	68057	4915	824.0	218.5	72.27	28.15	12.09	5.35
10	35993	3076	566.4	151.4	49.94	19.30	8.21	3.70
15	19368	1948	375.3	98.80	33.47	13.36	5.68	2.70
20	10800	1130	240.0	68.00	22.70	9.60	4.33	2.08
25	5916	694	149.9	45.80	17.20	7.17	3.28	1.66
30	3450	420	94.6	31.00	11.30	5.20	2.60	1.42
35	2053	268	60.6	21.28	8.05	3.81	2.05	1.22
40	1235	172	40.8	14.97	6.11	3.00	1.71	1.05
45	740	115	30.2	11.01	4.76	2.43	1.46	0.93

User Notes

1. Ensure that no water, alcohol, oil or finger salts make contact with the sensor element
2. Ensure A.C. power source only
3. Do not directly expose sensor to smoke from cigarettes, breath or excessive steam.
4. Do not use for medical apparatus involving risk of affecting life.

Probe Pads

Product Overview

A range of unique Surface mount devices from the Citec brand enable safe probing of circuitry when testing, adjusting, setting up, measuring and repairing tiny electronic circuitry. Available in 3 different surface mount sizes and packaged for automatic placement.

- Small dimensions
- SMD 0603, 0805 and 1206 sizes
- Suitable for flow or reflow soldering
- High current capability

Value	Maximum Current	Size	Family	Page
< 50 milliohms	2 amps	0603, 0805 and 1206	***RC***	168

Type RC Series

A range of unique surface mount devices. Avoid damage to sensitive tiny electronic circuits by incorporating these probe pads in the circuitry. A choice of three sizes relate to standard chip footprint areas. These probe pads are packaged on tape for high speed automatic placement. They enable safe probing of circuitry when adjusting, setting up measuring or repairing tiny electronic circuitry.

Key Features

- Small Dimensions
- Suited to Flow or Reflow Soldering
- Solder Only Sticks to Plated Base
- Packaged on Tape and Reeled
- High Current Handling
- Unaffected by Climatic Changes

Characteristics - Electrical

Type	Dimensions	Resistance	Weight	Current	Operating Temperature
RCU	1.60 x 0.80	Less Than 50 Milli Ohms	6.3mg	2 Amps	-55°C - +125°C

OCEAN CHIPS
Океан Электроники
Поставка электронных компонентов

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «**JONHON**», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «**FORSTAR**».

AVIC JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
