LC709202F

CMOS LSI 1-Cell Li+ (lithium-ion) Battery Monitor IC

Overview

The LC709202F is an IC that measures the remaining power level of 1-cell lithium-ion (Li+) batteries used for a portable equipment etc.

This product is able to reduce a fuel gauge errors by implementing its unique correction technology for measurement value of battery temperature and voltage.

It is possible for this to realize high precision for measurement in battery power measurement IC that does not need a current sensing resistor. ($\pm 3\%$ under certain conditions)

Applications

- Wireless Handsets
- Smartphones/PDA devices
- MP3 players
- digital cameras
- Portable Game Players
- USB-related devices

Features

- Accuracy of remaining battery power level measurement
 - $\pm 3\%$ (at an ambient operating temperature of 0°C to 50°C)
 - Note: The accuracy above is the value of an experiment using the evaluation board.
- Precision $\pm 7.5\text{mV/Cell}$ Voltage Measurement
- A current sensing resistor is unnecessary.
- Alert function
