## 1. Introduction

This document describes a proposed solution for a 120 W LED driver consisting of an AC-DC converter for flyback bias regulation, a boost converter for Power-Factor-Correction (PFC), an LLC resonant converter for a single LED channel with constant current and voltage or individual boost converters for two LED channels with constant current and dimming control. The input voltage range is  $85 V_{RMS} - 300 V_{RMS}$  and there are DC outputs with a constant current of 2.4 A at  $50 V_{MAX}$  for a single LED channel or with constant current and dimming of 1.2 V at 100 V for two LED channels.

The power supply mainly utilizes:

- FSL117MRIN – Green Mode Fairchild Power Switch (FPST™)
- FL7930B – CRM PFC Controller
- FAN7631 – Half-Bridge LLC Controller
- FAN73402 – Single-Channel Boost Controller (for each controller)
- FCPF190N60E and FCPF600N60Z – Fairchild SuperFET® Technology
- FDPF14N30 – Fairchild UniFET® Technology N-Channel MOSFET
- FFPF08H60S – Fairchild Hyperfast Rectifier
- MBR20200CT – Fairchild Schottky Rectifier
- RURD620CCS9A – Fairchild Ultra-Fast Recovery Rectifier (for discrete)

This document contains important information (e.g. schematic, bill of materials, printed circuit board layout, transformer design documentation), and the typical operating characteristics supporting this evaluation board.

### 1.1. General Description of FSL117MRIN

The FSL117MRIN is an integrated Pulse Width Modulation (PWM) controller and 700 V SenseFET specifically designed for offline Switched-Mode Power Supplies (SMPS) with minimal external components. The PWM controller includes an integrated fixed-frequency oscillator, Line Over-Voltage Protection (LOVP), Under-Voltage Lockout (UVLO), Leading-Edge Blanking (LEB), optimized gate driver, internal soft-start, temperature-compensated precise current sources for loop compensation, and self-protection circuitry. Compared with a discrete MOSFET and PWM controller solution, the FSL117MRIN can reduce total cost, component count, size, and weight; while simultaneously increasing efficiency, productivity, and system reliability. This device provides a basic platform for cost-effective design of a flyback converter.

### 1.1.1. Features

- Advanced Soft Burst Mode for Low Standby Power and Low Audible Noise
- Random Frequency Fluctuation (RFF) for Low Electromagnetic Interference (EMI)
- Pulse-by-Pulse Current Limit
- Overload Protection (OLP), Over-Voltage Protection (OVP), Abnormal Over-Current Protection (AOCP), Internal Thermal Shutdown (TSD) with Hysteresis, Output-Short Protection (OSP), Line Over-Voltage Protection (LOVP), and Under-Voltage Lockout (UVLO) with Hysteresis
- Low Operating Current (0.4 mA) in Burst Mode
- Internal Startup Circuit
- Internal Avalanche-Rugged 700 V SenseFET
- Built-in Soft-Start: 15 ms
- Auto-Restart Mode

## 1.2. General Description of FL7930C

The FL7930C is an active Power Factor Correction (PFC) controller for low- to high-power lumens applications that operate in Critical Conduction Mode (CRM). It uses a voltage-mode PWM that compares an internal ramp signal with the error amplifier output to generate a MOSFET turn-off signal. Because the voltage-mode CRM PFC controller does not need rectified AC line voltage information, it saves the power loss of an input voltage-sensing network. FL7930B provides over-voltage, open-feedback, over-current, input-voltage-absent detection, and under-voltage lockout protections. The FL7930B can be disabled if the INV pin voltage is lower than 0.45 V and the operating current decreases to a very low level. Using a new variable on-time control method, Total Harmonic Discharge (THD) is lower than conventional CRM boost PFC ICs. The FL7930C provides a PFC Ready pin that can be used to shutdown the boost power stage when PFC output voltage reaches the proper level (with hysteresis).

### 1.2.1. Features

- Additional PFC-Ready Function
- Input-Voltage-Absent-Detection Circuit
- Maximum Switching Frequency Limitation.
- Internal Soft-Start with Overshoot Prevention
- Internal Total harmonic Distortion (THD) Optimizer
- Precise Adjustable Output Over-Voltage Protection (OVP)
- Open-Feedback Protection and Disable Function
- Zero Current Detector (ZDC)
- 150  $\mu$ s Internal Startup Timer
- MOSFET Over-Current Protection (OCP)
- Under-Voltage Lockout with 3.5 V Hysteresis (UVLO)
- Low Startup (40  $\mu$ A) and Operating Current (1.5 mA)
- Totem-Pole Output with High State Clamp
- +500 / -800 mA Peak Gate Drive Current
- SOP-8 Package

### 1.3. General Description of FAN7631

The FAN7631 is a pulse-frequency modulation controller for high-efficiency half-bridge resonant converters that includes a high-side gate drive circuit, an accurate current-controlled oscillator, and various protection functions. The FAN7631 features include variable dead time, high operating frequency up to 600 kHz, protections such as LUVLO, and a selectable latch or A/R protection using the LS pin for user convenience. The Zero-Voltage-Switching (ZVS) technique reduces the switching losses and improves the efficiency significantly. ZVS also reduces the switching noise noticeably, which allows a small Electromagnetic Interference (EMI) filter. Offering everything necessary to build a reliable and robust resonant converter, the FAN7631 simplifies designs and improves productivity and performance. The FAN7631 can be applied to resonant converter topologies such as series resonant, parallel resonant, and LLC resonant converters.

### 1.3.1. Features

- Variable Frequency Control with 50% Duty Cycle for Half-bridge Resonant Converter Topologies
- High Efficiency through Zero-Voltage-Switching (ZVS)
- Up to 600 kHz Operating Frequency
- High Gate-Driving Current +500 mA/-1000 mA
- Precise Adjustable Output Over-Voltage Protection (OVP)
- Programmable Dead Time using a Resistor
- Pulse Skipping and Burst Operation for Frequency Limit (programmable) at Light-Load Condition
- Simple Remote on/off Control with Selectable Latch or A/R using FI or LS pin
- Protection Function; Over-Voltage Protection (OVP), Overload Protection (OLP), Over-Current Protection (OCP), Abnormal Over-Current Protection (AOCP), Internal Thermal Shutdown (TSD) and High Precise Line Under-Voltage Lockout (LUVLO)
- Level-Change OCP Function during Startup.
- SOP-16 Package

## 1.4. General Description of FAN73402

The FAN73402 is a single-channel boost controller that integrates an N-channel power MOSFET for PWM dimming using Fairchild's proprietary planar Double-diffused MOSFET (DMOS) technology. The IC operates as a constant-current source for driving high-current LEDs. It uses Current Mode control with programmable slope compensation to prevent sub-harmonic oscillation. The IC provides protections including: open-LED protection, over-voltage protection, and direct-short protection for high system reliability. The IC internally generates a FAULT signal with delay if an abnormal LED string condition occurs. PWM dimming and analog dimming functions can be implemented independently. Internal soft-start prevents inrush current flowing into output capacitor at startup.

### 1.4.1. Features

- Single-Channel Boost LED Switch
- Internal Power MOSFET for PWM Dimming:  
 $R_{DS(ON)}=1.0\ \Omega$  at  $V_{GS}=10\ V$ ,  $BV_{DSS}=200\ V$
- Current-Mode PWM Control
- Internal Programmable Slope Compensation
- Wide Supply Voltage Range: 10 V to 35 V
- LED Current Regulation:  $\pm 1\%$
- Programmable Switching Frequency
- Analog and PWM Dimming
- Wide Dimming Ratio: On Time=10  $\mu s$  to DC
- Cycle-by-Cycle Current Limiting
- Thermal Shutdown: 150°C
- Open-LED Protection (OLP)
- Over-Voltage Protection (OVP)
- Over-Current Protection (OCP)
- Error Flag Generation (for External Load Switch)
- Internal Soft-Start
- 16-Lead SOIC Package

### 8.1. System Efficiency

System efficiency is measured in 85 ~ 140 V<sub>AC</sub> [low line, 60 Hz] and 180 ~ 300 V<sub>AC</sub> [high line, 50 Hz] input voltage ranges. The results are for PFC and LLC converters in which a single LED channel can be connected and measured in the rated load condition [50 V/2.5 A] 30 minutes after AC power is turned on.

**Figure 17. System Efficiency**

**Table 9. System Efficiency**

Input Voltage	Output Voltage[V]	Output Current [A]	Input Power [W]	Output Power [W]	Efficiency
85 V <sub>AC</sub> [60 Hz]	49.69	2.503	141.70	124.37	87.77%
120 V <sub>AC</sub> [60 Hz]	49.69	2.503	138.10	124.37	90.06%
140 V <sub>AC</sub> [60 Hz]	49.69	2.507	137.10	124.57	90.86%
180 V <sub>AC</sub> [50 Hz]	49.69	2.502	135.80	124.32	91.55%
230 V <sub>AC</sub> [50 Hz]	49.69	2.503	135.20	124.37	91.99%
300 V <sub>AC</sub> [50 Hz]	49.69	2.501	134.60	124.27	92.33%

System efficiency is measured in 85 ~ 140 V<sub>AC</sub> [low line, 60 Hz] and 180 ~ 300 V<sub>AC</sub> [high line, 50Hz] input voltage ranges. The results are for PFC and LLC converters in which a single LED channel can be connected and measured in the 50% load condition [50 V/1.25 A] 30 minutes after AC power is turned on.

Table 11 shows stand-by power consumption of 85 V<sub>AC</sub>~ 140 V<sub>AC</sub> [low line, 60 Hz] and 180 ~ 300 V<sub>AC</sub> [high line, 50 Hz] input voltage ranges. The results are measured when the PS-ON switch is turned off.

Table 11. System Efficiency

Input Voltage	Input Power [W]
85 V <sub>AC</sub> [60 Hz]	0.283
120 V <sub>AC</sub> [60 Hz]	0.306
140 V <sub>AC</sub> [60 Hz]	0.315
180 V <sub>AC</sub> [50 Hz]	0.319
230 V <sub>AC</sub> [50 Hz]	0.341
300 V <sub>AC</sub> [50 Hz]	0.397

## 8.2. Power Factor and Total Harmonic Discharge (THD)

Power factor and THD were measured in 85 ~ 140 V<sub>AC</sub> [low line, 60 Hz] and 180 ~ 300 V<sub>AC</sub> [high line, 50 Hz] input voltage ranges. The measured data were results for the overall system with two channel LED loads connected.

## 8.4. Overall Startup Performance

Figure 21 and Figure 22 show the startup performance; including flyback, boost, LLC resonant converter, and single-channel boost converter at rated output load. The output load current starts flowing after about 469 ms and 340 ms for input voltage 85 V<sub>AC</sub> and 300 V<sub>AC</sub> condition when the AC input power switch turns on; CH1: V<sub>DD\_Flyback</sub> (10 V / div), CH2: V<sub>IN</sub> (200 V / div), CH3: V<sub>LED</sub> (50 V / div), CH4: I<sub>LED</sub> (0.5 A / div), Time Scale: 200 ms / div.

Figure 21. V<sub>IN</sub> = 85 V<sub>AC</sub> / 60 Hz

Figure 22. V<sub>IN</sub> = 300 V<sub>AC</sub> / 50 Hz

Figure 23 and Figure 24 show the startup and stop performance for the PS-ON switch operation; including boost, LLC resonant converter, and single-channel boost converter. The output load current starts flowing about 59 ms after the PS-ON switch was turned on and is disconnected when the PS-ON switch was turned off in standby status; CH1: V<sub>DD\_PFC</sub> (10 V / div), CH2: V<sub>PS-ON</sub> (2 V / div), CH3: V<sub>LED</sub> (50 V / div), CH4: I<sub>LED</sub> (0.5 A / div).

## 8.5. Startup Performance in Flyback Stage

Figure 25 and Figure 26 show the startup performance of the flyback converter. The output voltage is raised after about 395 ms and 297 ms at 85 V<sub>AC</sub> and 300 V<sub>AC</sub> input voltage, respectively, when the AC input power switch turns on; CH1: V<sub>DD-FLYBACK</sub> (10 V / div), CH2: V<sub>IN</sub> (200 V / div), CH3: V<sub>SV</sub> (2 V / div), CH4: V<sub>DD-FAN73402</sub> (10 V / div), Time Scale: 200 ms / div.

Figure 25. V<sub>IN</sub> = 85 V<sub>AC</sub> / 60 Hz

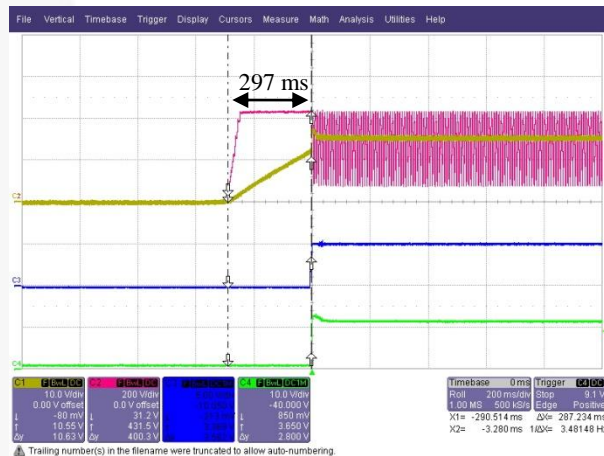

Figure 26. V<sub>IN</sub> = 300 V<sub>AC</sub> / 50 Hz

Figure 27 and Figure 28 show the startup and stop performance for the flyback converter according to PS-ON switch operation. Each output voltage is raised at the same time when the PS-ON switch is turned on and V<sub>DD-FAN73402</sub> drops under UVLO after 100 ms since PS-ON switch was turned off in standby status; CH1: V<sub>DD-PFC</sub> (10 V / div), CH2: V<sub>PS-ON</sub> (2 V / div), CH3: V<sub>SV</sub> (2 V / div), CH4: V<sub>DD-FAN73402</sub> (10 V / div), Time Scale: 200 ms / div.

## 8.6. Startup Performance in PFC Stage

Figure 29 and Figure 30 show the startup performance; including flyback and boost converter at the rated output load. The PFC output voltage is raised after about 429 ms and 339 ms, respectively, for input voltage 85 V<sub>AC</sub> and 300 V<sub>AC</sub> condition when the AC input power switch turns on; CH1: V<sub>DD-FLYBACK</sub> (10 V / div), CH2: V<sub>IN</sub> (200 V / div), CH3: V<sub>OUT\_PFC</sub> (200 V / div), CH4: V<sub>R<sub>RDY</sub></sub> (2 V / div), Time Scale: 200 ms / div.

Figure 29. V<sub>IN</sub> = 85 V<sub>AC</sub> / 60 Hz

Figure 30. V<sub>IN</sub> = 300V<sub>AC</sub> / 50 Hz

Figure 31 and Figure 32 show the startup and stop performance for the boost converter according to PS-ON switch operation at rated output load. The PFC output is raised rapidly when the PS-ON switch is turned on and V<sub>DD-PFC</sub> drops below UVLO and PFC output starts discharging PFC output capacitors when PS-ON switch was turned off in standby status; CH1: V<sub>DD-PFC</sub> (10 V / div), CH2: V<sub>PS-ON</sub> (2 V / div), CH3: V<sub>OUT-PFC</sub> (200 V / div), CH4: V<sub>R<sub>RDY</sub></sub> (2 V / div).

## 8.7. Startup Performance in LLC Stage

Figure 33 and Figure 34 show the startup performance; including flyback, boost, and LLC converter. The LLC output voltage is raised after about 455 ms and 337 ms, respectively, for input voltage 85 V<sub>AC</sub> and 300 V<sub>AC</sub> condition when the AC input power switch turns on; CH1: V<sub>DD-FLYBACK</sub> (10 V / div), CH2: V<sub>IN</sub> (200 V / div), CH3: V<sub>OUT-LLC</sub> (20 V / div), CH4: I<sub>OUT-LLC</sub> (2 A / div), Time Scale: 200 ms / div.

Figure 33. V<sub>IN</sub> = 85 V<sub>AC</sub> / 60 Hz

Figure 34. V<sub>IN</sub> = 300 V<sub>AC</sub> / 50 Hz

Figure 35 and Figure 36 show the startup and stop performance for the LLC converter according to the PS-ON switch operation at rated output load. The LLC output current is raised up to the rated voltage within 50 ms after the PS-ON switch is turned on and the output current drops to zero quickly when the PS-ON switch is turned off in standby status; CH1: V<sub>DD-LLC</sub> (10 V / div), CH2: V<sub>PS-ON</sub> (2 V / div), CH3: V<sub>OUT-LLC</sub> (20 V / div), CH4: I<sub>OUT-LLC</sub> (2 A / div), Time Scale: 200 ms / div.

### WARNING AND DISCLAIMER

Replace components on the Evaluation Board only with those parts shown on the parts list (or Bill of Materials) in the Users' Guide. Contact an authorized Fairchild representative with any questions.

The Evaluation board (or kit) is for demonstration purposes only and neither the Board nor this User's Guide constitute a sales contract or create any kind of warranty, whether express or implied, as to the applications or products involved. Fairchild warrants that its products meet Fairchild's published specifications, but does not guarantee that its products work in any specific application. Fairchild reserves the right to make changes without notice to any products described herein to improve reliability, function, or design. Either the applicable sales contract signed by Fairchild and Buyer or, if no contract exists, Fairchild's standard Terms and Conditions on the back of Fairchild invoices, govern the terms of sale of the products described herein.

#### DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS.

#### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, or (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

### ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
