## Description

This SP6T RF switch is a perfect solution for multimode handsets based on LTE and WCDMA. It is based on Infineon's proprietary technology and has excellent RF performance. The ultra-low insertion loss helps customers to achieve high system sensitivity, the coverage of LTE Tx power and 6 GHz enables very broad application. It features DC-free RF ports, external DC blocking capacitors at the RF ports are only required if DC voltage is applied externally. Its on chip MIPI RFFE 2.0 controller is fully compatible with industry standard.

<sup>1)</sup> Switch has a low-pass response. For higher frequencies, losses have to be considered for their impact on thermal heating. The DC voltage at RF ports  $V_{RFDC}$  has to be 0V.

<sup>2)</sup> Note: Consider any ripple voltages on top of  $V_{IO}$ . Including RF ripple,  $V_{IO}$  must not exceed the maximum ratings:  $V_{IO} = V_{DC} + V_{Ripple}$ .

<sup>4)</sup> Field-Induced Charged-Device Model ANSI/ESDA/JEDEC JS-002. Simulates charging/discharging events that occur in production equipment and processes. Potential for CDM ESD events occurs whenever there is metal-to-metal contact in manufacturing.

<sup>5)</sup> Human Body Model ANSI/ESDA/JEDEC JS-001 ( $R = 1,5\text{ k}\Omega$ ,  $C = 100\text{ pF}$ ).

<sup>6)</sup> IEC 61000-4-2 ( $R = 330\text{ }\Omega$ ,  $C = 150\text{ pF}$ ), contact discharge.

**Warning: Stresses above the max. values listed here may cause permanent damage to the device. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit. Exposure to conditions at or below absolute maximum rating but above the specified maximum operation conditions may affect device reliability and life time. Functionality of the device might not be given under these conditions.**
