## Revision History

Revision	Date	Owner	Description
1.0	07.10.2013	gheh	Initial release

## 1 General Description

This document describes the USB Interface Board which creates the link between our demo Boards and the USB Interface on the PC side.

This demo Board is used in conjunction with a number of different demo boards.

It supports SPI, I2C, UART, CAN and LIN as well as normal GPIO Interfaces and passed them onto USB Port.

The Protocol to the PC side is AMS-Stream via USB-HID and the appropriate driver which is built-in in modern Operating Systems.

### 1.1 Kit Content

The kit consists of the dual layer PCB USB Interface Board a USB Cable and a HDMI Type-D to Type-C Cable which is used to connect to the demo board.

Figure 1: USB Interface Board

## 2 Getting Started

As this Interface Board is for a multitude of demos there is no general setup procedure. Typically you would install the Software of the Demo Board you're using, and then select the appropriate Interface voltage on the USB Interface Board as described in Chapter 4.1. Afterwards you connect the Demo Board via the HDMI or eSATA Cable and then the USB Interface board to the Computer via a USB cable. Important for normal operation the switch S1 has to point away from the left top edge otherwise the MCU will enter Firmware Update mode.

### 3 Hardware Description

The USB Interface Board is powered via J3 the USB Connector. It can run on 5V or 3.3V which is selectable via J4.

Figure 2: PCB Top Side Diagram

Label	Name	Designator	Description	Info
A	PROG_SWITCH	S1	Program Switch	Switch to enable Firmware Upload via USB
B	V_SELECT	J4	Voltage Selector	Selects between 3.3V and 5V supply and logic
C	LIN_EN	J5 / J6	Lin Enable	Jumper to enable LIN Interface bridge from left to right
D	UART	J7	Uart Connector	Allows to connect Bluetooth UART Interface
E	USB	J3	Usb Connector	Connects to the PC
F	CAN / LIN	J8	Automotive Interface Connector	Interfaces to the CAN and LIN Bus and provides 12V
G	SPI / I2C / UART / GPIO	J2	Serial Interface Connector	Interfaces to the Standard Serial Protocols
H/I	JTAG	J1/J9	JTAG Programming	Allow to Program and debug the

Label	Name	Designator	Description	Info
			Connector	chip. J9 is a Tag-Connect

Table 1: Connection Diagram

## 4 Configuration

### 4.1 Supply and Logic Voltage

The Supply and Logic voltage is configured by J4. Placing a jumper on the left two of the three pins will select 5V (which is required e.g. for the AS8506 demo boards). Placing the jumper in on the right two pins will select 3.3V operation (which is e.g. required for the AS8510).

### 4.2 LIN Enable

To enable the LIN Interface two jumpers have to be placed on J5 and J6. This will disable one of the two serial Interfaces and redirect it to the LIN Transceiver.

### 4.3 Firmware Update

#### 4.3.1 JTAG

The Firmware can be updated and changed either via the JTAG Interface which is accessible either via the standard 20 pin JTAG Connector J1 (which by default is not populated) or via the 10pin tag-connect plug J9 (<http://www.tag-connect.com/TC2050-IDC>)

#### 4.3.2 USB

The Microcontroller has an integrated bootloader which allow software update via USB. This can be triggered by placing the Switch S1 in direction of the left top corner and then plugging in the USB cable. This will enumerate a new Serial Device which can then be programmed via the Flash USB Direct Programmer

(<http://www.spansion.com/Support/microcontrollers/developmentenvironment/Pages/usb-direct-download.aspx>)

**Figure 3: FLASH Usb Direct Programmer GUI**

Be sure to select MB9BF524K/L/M as Target MCU and the hex file you want to upload. Then select the correct com Port which the Microcontroller enumerated to and click **Full Operation**

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
