

MAX4952A Evaluation Kit

Evaluates: MAX4952A

General Description

The MAX4952A evaluation kit (EV kit) provides a proven design to evaluate the MAX4952A dual-channel buffer. The EV kit contains four sections: an application circuit, characterization circuit, and two calibration traces.

The application circuit (Figure 1a) is designed to demonstrate the MAX4952A IC's use in redriving Serial-Attached SCSI (SAS) and Serial ATA (SATA) signals. This section of the EV kit operates from an external +5V supply that is regulated by an on-board LDO to +3.3V, which powers the MAX4952A (U1) device. All traces in the application circuit are 100Ω differential controlled-impedance traces.

The characterization circuit (Figure 1b) is provided for eye diagram evaluation using SMA connectors and 50Ω single-ended controlled-impedance traces. This section is powered by an external +3.3V supply.

Features

- ◆ Application Circuit with SAS and SATA Input/Output
- ◆ Eye Diagram Test Circuit with SMA Inputs/Outputs
- ◆ Calibration Traces (50Ω Single-Ended Load Trace and 50Ω Single-Ended Through Trace)
- ◆ Lead(Pb)-Free and RoHS Compliant
- ◆ Proven PCB Layout
- ◆ Fully Assembled and Tested

MAX4952A Evaluation Kit

Quick Start (Application Circuit)

Recommended Equipment

- MAX4952A EV kit
- +5V power supply
- Two SAS/SATA cables
- SAS/SATA device (e.g., a hard drive)
- SAS/SATA host (e.g., a PC)

Procedure

The MAX4952A EV kit is fully assembled and tested. Follow the steps below to verify board operation:

- 1) Verify that all jumpers are in their default position, as shown in Table 1.
- 2) If testing in a SATA environment, change the shunt on jumper JU6 to the 1-2 position.
- 3) Connect the first SAS/SATA cable from the PC to the host connector (J1) on the EV kit.
- 4) Connect the second SAS/SATA cable from the device connector (J2) to the SAS/SATA device.
- 5) Verify communication between the host PC and SAS/SATA device.

Detailed Description of Hardware

The MAX4952A evaluation kit (EV kit) evaluates the MAX4952A dual-channel buffer. The MAX4952A is designed to redrive Serial-Attached SCSI (SAS) or Serial ATA (SATA) signals. The EV kit is divided into four

sections: application circuit, characterization circuit, and two calibration traces.

The application circuit utilizes 100Ω differential controlled impedance traces and provides two SAS connectors (J1 and J2), allowing for evaluation of the MAX4952A in a SAS environment. The characterization circuit utilizes 50Ω single-ended, controlled-impedance traces and SMA input/output connectors, allowing for eye diagrams, and input/output return-loss measurements.

The lower-half of the EV kit provides two sets of calibration traces (Figure 1c), all of which are matched to the trace lengths in the characterization circuit. These traces provide a reference for determining the performance of only the MAX4952A device when evaluated in the characterization circuit.

Application Circuit (U1)

The application circuit provides the means for evaluating the MAX4952A in a SAS/SATA application. This section of the EV kit provides two SAS/SATA connectors (J1 and J2), one for connection to a SAS/SATA host (e.g., a PC) and the other for connection to a SAS/SATA device (e.g., a hard drive).

Power Supply (VIN)

The application circuit must be powered by +3.3V. There are two ways to get this voltage, either the on-board LDO (U3) or an external +3.3V power supply. When using the on-board voltage regulator, the LDO can be powered by the 4-pin Molex connector (H1) or by a +5V external supply connected to the VIN and GND pads. When using the on-board LDO to supply power, there is a power LED (D1) to indicate the presence of +3.3V at VCC.

The user can also connect directly to a +3.3V supply, which is available on a SAS power connector. The shunt should be removed from jumper JU11 and a wire connected from the SAS power pin to pin-2 (right-most pin) of jumper JU11 (see Table 2).

Table 1. Default Shunt Positions

JUMPER	SHUNT POSITION
JU1–JU4, JU7, JU8, JU10	2-3
JU5, JU9	1-2
JU6	2-3 (SAS)
JU11	Installed

Table 2. Jumper JU11 Function

SHUNT POSITION	VCC PIN (U1)	DESCRIPTION
Installed*	Connected to on-board LDO output	U1 powered by LDO output (+3.3V)
Not installed	Connected to external supply	Powered by +3.3V from an external supply or SAS power connector

*Default position.

MAX4952A Evaluation Kit

Mode Control (JU6)

The MAX4952A device can also be used to redrive Serial ATA (SATA) signals. The MODE pin configures the device to operate with SATA or SAS signals. See Table 3 for jumper JU6 functions.

Device Enable (JU5)

The MAX4952A (U1) is enabled/disabled by configuring jumper JU5 (see Table 4). When disabled, the

MAX4952A buffers are disabled and the part is placed in a low-power standby mode.

Input Equalization (JU1, JU3)

The MAX4952A host and device can be evaluated with or without input equalization. Configure JU1 to enable/disable the host input (IN0P, IN0M) equalization and JU3 to enable/disable the device input (IN1P, IN1M) equalization (see Tables 5 and 6).

Table 3. Jumper JU6 Function

SHUNT POSITION	MODE PIN (U1)	DESCRIPTION
1-2	Connected to +3.3V	Signal type: SATA
2-3*	Connected to GND	Signal type: SAS
Not installed	Not connected	

*Default position.

Table 4. Jumper JU5 Function

SHUNT POSITION	EN PIN (U1)	DESCRIPTION
1-2*	Connected to +3.3V	Buffers enabled for normal operation
2-3	Connected to GND	Buffers disabled and device is in low-power standby mode
Not installed	Not connected	

*Default position.

Table 5. Jumper JU1 Function

SHUNT POSITION	EQ0 PIN (U1)	DESCRIPTION
1-2	Connected to +3.3V	Host equalization enabled
2-3*	Connected to GND	Host equalization disabled
Not installed	Not connected	

*Default position.

Table 6. Jumper JU3 Function

SHUNT POSITION	EQ1 PIN (U1)	DESCRIPTION
1-2	Connected to +3.3V	Device equalization enabled
2-3*	Connected to GND	Device equalization disabled
Not installed	Not connected	

*Default position.

MAX4952A Evaluation Kit

Output Preemphasis (JU2, JU4)

The MAX4952A host and device can be evaluated with or without output preemphasis. Configure JU2 to enable/disable the host output preemphasis and JU4 to enable/disable the device output preemphasis (see Tables 7 and 8).

Characterization Circuit (U2)

The characterization circuit is provided as a separate test circuit for eye diagram evaluation of the MAX4952A IC. This circuit provides differential SMA inputs and outputs with 50Ω single-ended, controlled-impedance traces. Channel 1 is not utilized in this section of the EV kit, but provides the same performance as Channel 0.

Power Supply (VCC)

The characterization circuit is powered by an external +3.3V power supply connected between the VCC and GND pads.

Mode Control (JU10)

The MAX4952A device (U2) can also be used to redrive Serial ATA (SATA) signals. The MODE pin configures the device to operate with SATA or SAS signals (see Table 9 for jumper JU10 functions).

Device Enable (JU9)

The MAX4952A (U2) is enabled/disabled by configuring jumper JU9 (see Table 10). When disabled, the MAX4952A buffers are disabled and the part is placed in a low-power standby mode.

Table 7. Jumper JU2 Function

SHUNT POSITION	PE0 PIN (U1)	DESCRIPTION
1-2	Connected to +3.3V	Host preemphasis enabled
2-3*	Connected to GND	Host preemphasis disabled
Not installed	Not connected	

*Default position.

Table 8. Jumper JU4 Function

SHUNT POSITION	PE1 PIN (U1)	DESCRIPTION
1-2	Connected to +3.3V	Device preemphasis enabled
2-3*	Connected to GND	Device preemphasis disabled
Not installed	Not connected	

*Default position.

Table 9. Jumper JU10 Function

SHUNT POSITION	MODE PIN (U2)	DESCRIPTION
1-2	Connected to VCC (+3.3V)	Signal type: SATA
2-3*	Connected to GND	Signal type: SAS
Not installed	Not connected	

*Default position.

Table 10. Jumper JU9 Function

SHUNT POSITION	EN PIN (U2)	DESCRIPTION
1-2*	Connected to VCC (+3.3V)	Buffers enabled for normal operation
2-3	Connected to GND	Buffers disabled and device is in low-power standby mode
Not installed	Not connected	

*Default position.

MAX4952A Evaluation Kit

Input Equalization (JU7)

The MAX4952A channel 0 can be evaluated with or without input equalization. Configure JU7 to enable/disable channel 0 equalization.

Output Preemphasis (JU8)

The MAX4952A channel 0 can be evaluated with or without preemphasis. Configure JU8 to enable/disable channel 0 preemphasis.

Calibration Traces

The bottom-half of the EV kit provides two sets of calibration traces, which can be used for further analysis. The lengths of the calibration traces are matched to the traces going from the SMA connector to MAX4952A (U2) of the characterization circuit. The first calibration trace includes a 50Ω single-ended load termination and the second calibration trace is a through trace.

Table 11. Jumper JU7 Function

SHUNT POSITION	EQ0 PIN (U2)	DESCRIPTION
1-2	Connected to VCC (+3.3V)	Channel 0 equalization enabled
2-3*	Connected to GND	Channel 0 equalization disabled
Not installed	Not connected	

*Default position.

Table 12. Jumper JU8 Function

SHUNT POSITION	PE0 PIN (U2)	DESCRIPTION
1-2	Connected to VCC (+3.3V)	Channel 0 preemphasis enabled
2-3*	Connected to GND	Channel 0 preemphasis disabled
Not installed	Not connected	

*Default position.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
