

# High-Current, 25Ω, SPDT, CMOS Analog Switches

MAX4659/MAX4660

## General Description

The MAX4659/MAX4660 are medium voltage CMOS analog switches with a low on-resistance of 25Ω max specifically designed to handle large switch currents. With a switch capability of up to 200mA peak current and 150mA continuous current (MAX4660), and up to 150mA peak current and 75mA continuous current (MAX4659), these parts can switch loads as low as 50Ω. They can replace reed relays with a million times the speed and a virtually unlimited number of lifetime cycles. Normal power consumption is only 3mW, whether the switch is on or off. These parts are TTL/CMOS compatible and will switch any voltage within their power-supply range.

The devices are single-pole/double-throw (SPDT) switches. The MAX4659/MAX4660 contain one normally closed (NC) switch and one normally open (NO) switch.

The MAX4659/MAX4660s' power-supply range is from ±4.5V to ±20V for dual-supply operation and +9V to +40V for single-supply operation. These switches can operate from any combination of supplies, within a 40V V+ to V- range. They conduct equally well in either direction and can handle rail-to-rail analog signals. The off-leakage current is only 1nA max at T<sub>A</sub> = +25°C. The MAX4659 is available in 8-pin μMAX<sup>®</sup> and SO packages. The MAX4660 is available in thermally enhanced exposed paddle μMAX and SO packages.

## Applications

- Relay Replacement
- Test Equipment
- Communication Systems
- xDSL Modems
- PBX, PABX Systems
- Audio Signal Routing
- Audio Systems
- PC Multimedia Boards
- Redundant/Backup Systems

μMAX is a registered trademark of Maxim Integrated Products, Inc.

## Features

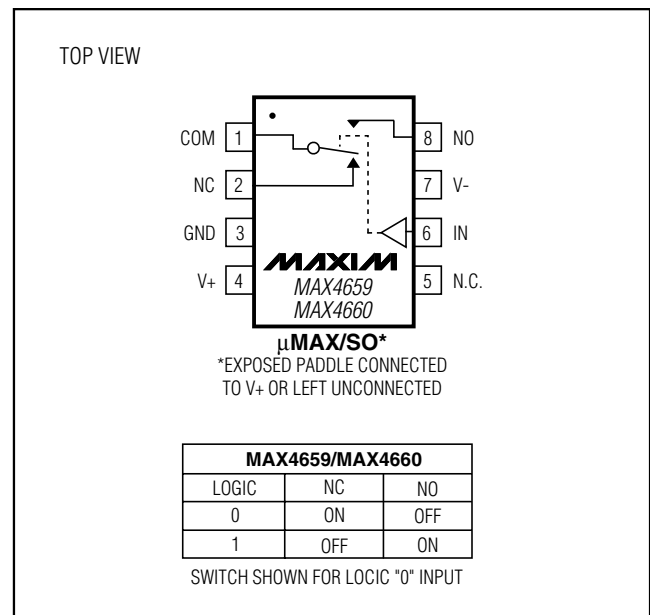

- ◆ High Continuous Current Handling
  - 150mA Continuous Current (MAX4660)
  - 75mA Continuous Current (MAX4659)
- ◆ High Peak Current Handling
  - 200mA Peak Current (MAX4660)
  - 150mA Peak Current (MAX4659)
- ◆ 25Ω max On-Resistance (±15V Supplies)
- ◆ V<sub>L</sub> Supply Not Required
- ◆ 1.5Ω max R<sub>ON</sub> Flatness (±15V Supplies)
- ◆ Rail-to-Rail Signal Handling
- ◆ +12V Single Supply or ±15V Dual-Supply Operation
- ◆ Pin Compatible with DG419, MAX319

## Ordering Information

PART	TEMP RANGE	PIN-PACKAGE	PKG CODE
MAX4659EUA	-40°C to +85°C	8 μMAX	U8-1
MAX4659ESA	-40°C to +85°C	8 SO	S8-2
MAX4660EUA	-40°C to +85°C	8 μMAX-EP*	U8E-2
MAX4660ESA	-40°C to +85°C	8 SO-EP*	S8E-12

\*EP = Exposed paddle.

## Pin Configuration

# High-Current, 25Ω, SPDT, CMOS Analog Switches

## ABSOLUTE MAXIMUM RATINGS

V+ to GND	-0.3V to +44V	8-Pin μMAX (derate 4.50mW/°C above +70°C)	
V- to GND	-44V to +0.3V	MAX4659	362mW
V+ to V-	-0.3V to +44V	8-Pin SO-EP (derate 18.9mW/°C above +70°C)	
All Other Pins to GND (Note 1)	(V- - 0.3V) to (V+ + 0.3V)	MAX4660	1509mW
Continuous Current COM, NO, NC (MAX4660)	±150mA	8-Pin SO (derate 5.88mW/°C above +70°C)	
Continuous Current COM, NO, NC (MAX4659)	±75mA	MAX4659	471mW
Continuous Current IN	±30mA	Operating Temperature Ranges	
Peak Current COM, NO, NC		MAX4659/MAX4660	-40°C to +85°C
MAX4660 (pulsed at 1ms, 10% duty cycle)	±200mA	Junction Temperature	+150°C
MAX4659 (pulsed at 1ms, 10% duty cycle)	±150mA	8-Pin SO Storage Temperature Range	-65°C to +150°C
Continuous Power Dissipation (TA = +70°C)		Lead Temperature (soldering, 10s)	+300°C
8-Pin μMAX-EP (derate 10.3mW/°C above +70°C)			
MAX4660	825mW		

**Note 1:** Signals on NO, NC, COM, or IN exceeding V+ or V- are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS—Dual Supplies

(V+ = +15V, V- = -15V, VIH = 2.4V, VIL = 0.8V, TA = TMIN to TMAX, unless otherwise noted. Typical values are at TA = +25°C.) (Notes 2, 6)

**Note 2:** The algebraic convention is used in this data sheet; the most negative value is shown in the minimum column.

**Note 3:** Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal range.

**Note 4:** Leakage parameters are 100% tested at maximum-rated hot temperature and guaranteed by correlation at T<sub>A</sub> = +25°C.

**Note 5:** Off-isolation = 20log<sub>10</sub> [V<sub>COM</sub> / (V<sub>NC</sub> or V<sub>NO</sub>)], V<sub>COM</sub> = output, V<sub>NC</sub> or V<sub>NO</sub> = input to off switch.

**Note 6:** -40°C specifications are guaranteed by design.

## Pin Description

PIN	NAME	FUNCTION
1	COM	Analog Switch Common
2	NC	Normally Closed Switch Terminal. NC is connected to COM when IN is low.
3	GND	Ground
4	V+	Positive Supply Voltage Input
5	N.C.	No Connection
6	IN	Digital Control Input
7	V-	Negative Supply Voltage Input
8	NO	Normally Open Switch Terminal. NO is connected to COM when IN is high.
—	EP	Exposed Paddle. Connect EP to V+ or leave unconnected.

MAX4659/MAX4660

## Detailed Description

The MAX4659/MAX4660 are single, single-pole/double-throw (SPDT) CMOS analog switches. The CMOS switch construction provides rail-to-rail signal handling while consuming very little power. The switch is controlled by a TTL/CMOS level compatible digital input. The MAX4659/MAX4660 have a normally open switch and a normally closed switch.

These devices can be operated with either single power supplies or dual power supplies. Operation at up to  $\pm 20\text{V}$  supplies allows users a wide switching dynamic range. Additionally, asymmetrical operation is possible to tailor performance to a particular application.

These switches have been specifically designed to handle high switch currents, up to 200mA peak current and 150mA continuous currents. In order to do this, a new technique is used to drive the body of the output N-channel device. (Note: The basic switch between the input, NC/NO terminal and the output common terminal consists of an N-channel MOSFET and a P-channel MOSFET in parallel.) The standard method limits operation to approximately a 600mV drop across the switch. More than 600mV causes an increase in  $I_{D_{ON}}$  leakage current (due to the turn-on of on-chip parasitic diodes), and an increase in  $V_+$  supply current. With this new sensing method, there is no limitation to the voltage drop across the switch. Current and voltage are limited only by the power dissipation rating of the package and the absolute maximum ratings of the switch.

When the analog input voltage drop is approximately 7mV there is an increase in power supply current from 90 $\mu\text{A}$  to 2mA (typ) within a 1mV to 7mV range, caused by the new sensing/driving circuitry.

## Applications Information

### Overvoltage Protection

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings, because stresses beyond the listed ratings can cause permanent damage to the devices. First, connect GND, followed by  $V_+$ ,  $V_-$ , and the remaining pins. If power-supply sequencing is not possible, add two small-signal diodes (D1, D2) in series with

supply pins (Figure 1). Adding diodes reduces the analog signal range to one diode drop below  $V_+$  and one diode drop above  $V_-$ , but does not affect the devices' low switch resistance and low leakage characteristics. Device operation is unchanged, and the difference between  $V_+$  and  $V_-$  should not exceed 44V. The protection diode for the negative supply is not required when  $V_-$  is connected to GND.

### Off-Isolation at High Frequencies

In 50 $\Omega$  systems, the high-frequency on-response of these parts extends from DC to above 100MHz, with a typical loss of -2dB. When the switch is turned off, however, it behaves like a capacitor and off-isolation decreases with increasing frequency. This effect is more pronounced with higher source and load impedances. Above 5MHz, circuit board layout becomes critical. The graphs shown in the *Typical Operating Characteristics* were taken using a 50 $\Omega$  source and load connected with BNC connectors.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «**JONHON**», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «**FORSTAR**».

## JONHON

«**JONHON**» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«**FORSTAR**» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
