

GENERAL DESCRIPTION

The 87604I is a 1:4 PCI/PCI-X Clock Generator. The 87604I has a selectable REF_IN or crystal input. The REF_IN input accepts LVCMOS or LVTTTL input levels. The 87604I has a fully integrated PLL along with frequency configurable clock and feedback outputs for multiply-ing and regenerating clocks with “zero delay”. The PLL’s VCO has an operating range of 250MHz - 500MHz, allowing this device to be used in a variety of general purpose clocking applications. For PCI/PCI-X applications in particular, the VCO frequency should be set to 400MHz. This can be accomplished by supplying 33.33MHz, 25MHz, 20MHz, or 16.66MHz on the reference clock or crystal input and by selecting ÷12, ÷16, ÷20, or ÷24, respectively as the feedback divide value. The divider on the output bank can then be configured to generate 33.33MHz (÷12), 66.66MHz (÷6), 100MHz (÷4), or 133.33MHz (÷3).

The 87604I is characterized to operate with its core supply at 3.3V and the bank supply at 3.3V or 2.5V. The 87604I is packaged in a small 6.1mm x 9.7mm TSSOP body, making it ideal for use in space-constrained applications.

BLOCK DIAGRAM

FEATURES

- Fully integrated PLL
- Four LVCMOS/LVTTTL outputs, 15Ω typical output impedance
- Selectable crystal oscillator interface or LVCMOS/LVTTTL REF_IN clock input
- Maximum output frequency: 166.67MHz
- Maximum crystal input frequency: 38MHz
- Maximum REF_IN input frequency: 41.67MHz
- Individual banks with selectable output dividers for generating 33.33MHz, 66.66MHz, 100MHz and 133.33MHz
- Separate feedback control for generating PCI / PCI-X frequencies from a 16.66MHz or 20MHz crystal, or 25MHz or 33.33MHz reference frequency
- VCO range: 250MHz to 500MHz
- Cycle-to-cycle jitter: 120ps (maximum)
- Period jitter, RMS: 20ps (maximum)
- Output skew: 65ps (maximum)
- Static phase offset: 160ps ± 160ps
- Voltage Supply Modes:
 - $V_{DD} / V_{DDA} / V_{DDO}$
3.3/3.3/3.3
 - 3.3/3.3/2.5
- -40°C to 85°C ambient operating temperature
- Available in lead-free (RoHS 6) package

TABLE 1. PIN DESCRIPTIONS

Number	Name	Type		Description
1	V _{DD}	Power		Core supply pin.
2	FB_IN	Input	Pulldown	Feedback input to phase detector for generating clocks with “zero delay”. LVCMOS / LVTTTL interface levels.
3, 9, 20, 21	GND	Power		Power supply ground.
4	FB_OUT	Output		Feedback output. Connect to FB_IN. LVCMOS / LVTTTL interface levels.
5	REF_OUT	Output		Reference clock output. LVCMOS / LVTTTL interface levels.
6, 12	V _{DDO}	Power		Output supply pin
7, 8, 10, 11	Q3, Q2, Q1, Q0	Output		Clock outputs. 15Ω typical output impedance. LVCMOS / LVTTTL interface levels.
13	PLL_SEL	Input	Pullup	Selects between PLL and bypass mode. When HIGH, selects PLL. When LOW, selects reference clock. LVCMOS / LVTTTL interface levels.
14	V _{DDA}	Power		Analog supply pin. See Applications Note for filtering.
15	XTAL_SEL	Input	Pullup	Selects between crystal oscillator or reference clock as the PLL reference source. Selects XTAL inputs when HIGH. Selects REF_IN when LOW. LVCMOS / LVTTTL interface levels.
16, 17	XTAL_IN, XTAL_OUT	Input		Crystal oscillator interface. XTAL_IN is the input. XTAL_OUT is the output.
18	REF_IN	Input	Pulldown	Reference clock input. LVCMOS / LVTTTL interface levels.
19, 22, 24	nc	Unused		No connect.
23	MR	Input	Pulldown	Active HIGH Master Reset. When logic HIGH, the internal dividers are reset causing the outputs go low. When logic LOW, the internal dividers and the outputs are enabled. LVCMOS / LVTTTL interface levels.
25, 26	DIV_SEL0, DIV_SEL1	Input	Pulldown	Selects divide value for clock outputs as described in Table 3. LVCMOS / LVTTTL interface levels.
27, 28	FBDIV_SEL0, FBDIV_SEL1	Input	Pulldown	Selects divide value for reference clock output and feedback output. LVCMOS / LVTTTL interface levels.

NOTE: Pullup and Pulldown refer to internal input resistors. See Table 2, Pin Characteristics, for typical values.

odc	Output Duty Cycle; NOTE 4		48		52	%

NOTE: All parameters measured with feedback and output dividers set to DIV by 12 unless otherwise noted.

NOTE: Electrical parameters are guaranteed over the specified ambient operating temperature range, which is established when the device is mounted in a test socket with maintained transverse airflow greater than 500 lfm. The device will meet specifications after thermal equilibrium has been reached under these conditions.

NOTE 1: Defined as the time difference between the input reference clock and the average feedback input signal when the PLL is locked and the input reference frequency is stable. Measured at $V_{DD}/2$.

NOTE 2: Defined as skew between outputs at the same supply voltage and with equal load conditions. Measured at $V_{DDO}/2$.

NOTE 3: Jitter performance using LVCMOS inputs.

NOTE 4: Measured using REF_IN. For XTAL input, refer to Application Note.

NOTE 5: This parameter is defined in accordance with JEDEC Standard 65.

NOTE 6: This parameter is defined as an RMS value.

APPLICATION INFORMATION

POWER SUPPLY FILTERING TECHNIQUES

As in any high speed analog circuitry, the power supply pins are vulnerable to random noise. To achieve optimum jitter performance, power supply isolation is required. The 87604I provides separate power supplies to isolate any high switching noise from the outputs to the internal PLL. V_{DD} , V_{DDA} , and V_{DDO} should be individually connected to the power supply plane through vias, and $0.01\mu\text{F}$ bypass capacitors should be used for each pin. *Figure 1* illustrates this for a generic V_{DD} pin and also shows that V_{DDA} requires that an additional 10Ω resistor along with a $10\mu\text{F}$ bypass capacitor be connected to the V_{DDA} pin. The 10Ω resistor can also be replaced by a ferrite bead.

FIGURE 1. POWER SUPPLY FILTERING

RECOMMENDATIONS FOR UNUSED INPUT AND OUTPUT PINS

INPUTS:

CRYSTAL INPUT

For applications not requiring the use of the crystal oscillator input, both XTAL_IN and XTAL_OUT can be left floating. Though not required, but for additional protection, a $1\text{k}\Omega$ resistor can be tied from XTAL_IN to ground.

REF_CLK INPUT

For applications not requiring the use of the reference clock, it can be left floating. Though not required, but for additional protection, a $1\text{k}\Omega$ resistor can be tied from the REF_CLK to ground.

LVC MOS CONTROL PINS

All control pins have internal pull-ups or pull-downs; additional resistance is not required but can be added for additional protection. A $1\text{k}\Omega$ resistor can be used.

OUTPUTS:

LVC MOS OUTPUTS

All unused LVC MOS output can be left floating. There should be no trace attached.

CRYSTAL INPUT INTERFACE

The 87604I has been characterized with 18pF parallel resonant crystals. The capacitor values, C1 and C2, shown in *Figure 2* below were determined using a 25MHz , 18pF parallel resonant crystal and were chosen to minimize the frequency ppm error. The optimum C1 and C2 values can be slightly adjusted for optimum frequency accuracy.

FIGURE 2. CRYSTAL INPUT INTERFACE

OVERDRIVING THE CRYSTAL INTERFACE

The XTAL_IN input can be overdriven by an LVCMOS driver or by one side of a differential driver through an AC coupling capacitor. The XTAL_OUT pin can be left floating. The amplitude of the input signal should be between 500mV and 1.8V and the slew rate should not be less than .2V/nS. For 3.3V LVCMOS inputs, the amplitude must be reduced from full swing to at least half the swing in order to prevent signal interference with the power rail and to reduce internal noise. *Figure 3A* shows an example of the interface diagram for a high speed 3.3V LVCMOS driver. This configuration requires that the sum of the output impedance of the driver (R_o) and the series resistance (R_s) equals the transmission line impedance. In addition, matched termination at the crystal input will attenuate the

signal in half. This can be done in one of two ways. First, R_1 and R_2 in parallel should equal the transmission line impedance. For most 50 applications, R_1 and R_2 can be 100 Ω . This can also be accomplished by removing R_1 and changing R_2 to 50 Ω . The values of the resistors can be increased to reduce the loading for slower and weaker LVCMOS driver. *Figure 2* shows an example of the interface diagram for an LVPECL driver. This is a standard LVPECL termination with one side of the driver feeding the XTAL_IN input. It is recommended that all components in the schematics be placed in the layout. Though some components might not be used, they can be utilized for debugging purposes. The datasheet specifications are characterized and guaranteed by using a quartz crystal as the input.

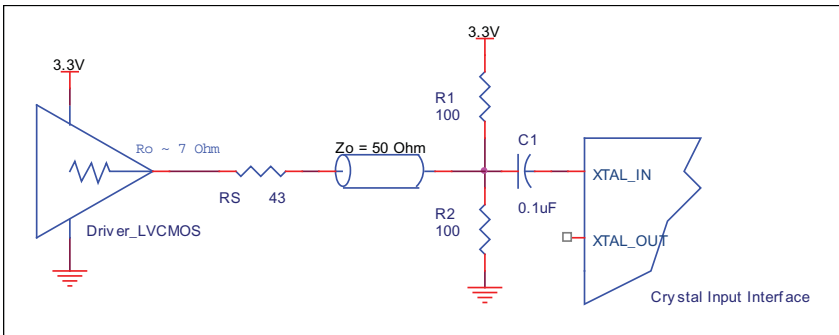

FIGURE 3A. GENERAL DIAGRAM FOR LVCMOS DRIVER TO XTAL INPUT INTERFACE

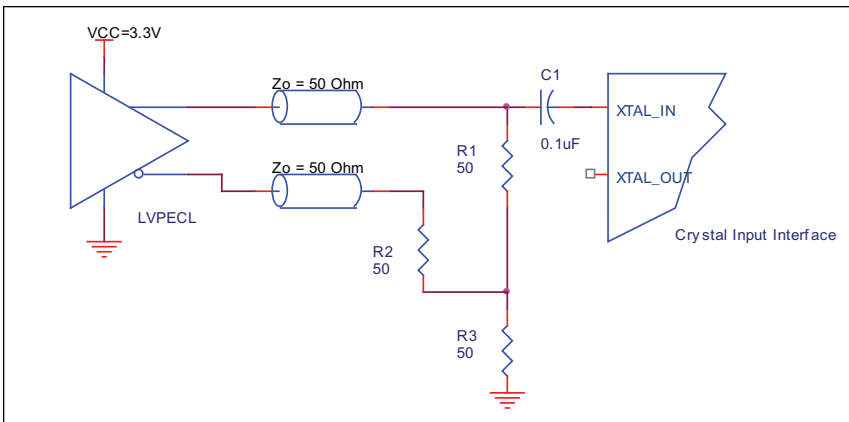

FIGURE 3B. GENERAL DIAGRAM FOR LVPECL DRIVER TO XTAL INPUT INTERFACE

SCHEMATIC EXAMPLE

Figure 4 shows a schematic example of the 87604I. Series termination is shown in this schematic. Additional LVCMOS termination approaches are shown in the LVCMOS Termination Application Note. In this example, an 18 pF parallel resonant 25MHz crystal is used. The C1=22pF and C2=22pF are recommended for frequency accuracy.

For different board layout, the C1 and C2 values may be slightly adjusted for optimizing frequency accuracy. The logic control inputs are either pull up or pull down depending on the application requirement. If there is space available, it is recommended to provide spare footprints as shown in the schematic for flexibility of choosing pull up or pull down.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
