

# MIC2550

## Universal Serial Bus Transceiver

### General Description

The MIC2550 is a single-chip transceiver that complies with the physical layer specifications for Universal Serial Bus (USB).

The MIC2550 supports full-speed (12Mbps) dual supply voltage operation (patent pending) and low-speed (1.5Mbps) operation.

A unique dual supply voltage operation allows the MIC2550 to reference the system I/F I/O signals to a supply voltage down to 2.5V while independently powered by the USB  $V_{BUS}$ . This allows the system interface to operate at its core voltage without addition of buffering logic and also reduce system operating current.

### Features

- Compliant to USB Specification Revision 2.0 for low-speed (1.5Mbps) and full-speed (12Mbps) operation
- Compliant to IEC-61000-4.2 (Level 2)
- Operation down to 2.5V
- Dual supply voltage operation
- Integrated speed-select termination supply
- Very low power consumption meets USB suspend-current requirements
- Small 14-pin TSSOP and 16-pin MLF™ packages

### Applications

- Personal digital assistants (PDA)
- Palmtop computers
- Cellular telephones

### Ordering Information

Part Number		Package
Standard	Pb-Free	
MIC2550BTS	MIC2550YTS	14-Pin TSSOP

## Pin Configuration

**14-Pin TSSOP (TM)**

**16-Pin MLF™ (ML)**

## Pin Description

Pin Name	Pin Number MIC2550BTS	Pin Number MIC2550BML	Pin Function
VIF	1	15	System Interface Supply Voltage (Input): Determines logic voltage levels for system interface signaling to logic controller.
SPD	2	1	Speed (Input): Edge rate control. Logic high selects full-speed edge rates. Logic low selects low-speed edge rates.
RCV	3	2	Receive Data (Output): System interface receive data interface to logic controller.
VP	4	3	Plus (Input/Output): System interface signal to logic controller. If OE# is logic 1, VP is a receiver output (+); If OE# is logic 0, VP is a driver input (+).
VM	5	4	Minus (Input/Output): System interface signal to logic controller. If OE# is logic 1, VM is a receiver output (-); If OE# is logic 0, VM is a driver input (-).
NC	6, 13	5, 8, 13 16	Not internally connected.
GND	7	6	Ground: Power supply return and signal reference.
SUS	8	7	Suspend (Input): Logic high turns off internal circuits to reduce supply current.
OE#	9	9	Output Enable (Input): Active-low system interface input signal from logic controller. Logic low causes transceiver to transmit data onto the bus. Logic high causes the transceiver to receive data from the bus.
D-	10	10	USB Differential Data Line - (Input/Output)
D+	11	11	USB Differential Data Line + (Input/Output)
VTRM	12	12	Termination Supply (Output): 3.3V speed termination resistor supply output.
VBUS	14	14	USB Supply Voltage (Input): Transceiver supply.

**Absolute Maximum Ratings (Note 1)**

Supply Voltage ( $V_{IF}$ )	+6.5V
Input Voltage ( $V_{BUS}$ )	-0.5V(min)/5.5V(max)
Output Current ( $I_{D+}$ , $I_{D-}$ )	±50mA
Output Current (all others)	±15mA
Input Current	±50mA
Power Dissipation ( $P_D$ )	TBD
Storage Temperature ( $T_S$ )	-65° to +150°C

**ESD, Note 3**

$V_{BUS}$ , D+, D-	±10kV
All other pins	±2kV

**Operating Ratings (Note 2)**

Supply Voltage ( $V_{BUS}$ )	4.0V to 5.25V
Temperature Range ( $T_A$ )	-40°C to +85°C
Junction Temperature ( $T_J$ )	160°C
Package Thermal Resistance TSSOP ( $\theta_{JA}$ )	100°C/W

**Electrical Characteristics (Note 8)**

$T_A = 25^\circ\text{C}$ , **bold** values indicate  $-40^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$ ; typical values at  $V_{BUS} = 5.0\text{V}$ ,  $V_{IF} = 3.0\text{V}$ ; minimum and maximum values at  $V_{BUS} = 4.0\text{V}$  to  $5.25\text{V}$ ,  $V_{IF} = 2.5\text{V}$  to  $3.6\text{V}$ ; unless noted.

**Note 1.** Exceeding the absolute maximum rating may damage the device.

**Note 2.** The device is not guaranteed to function outside its operating rating.

**Note 3.** Devices are ESD sensitive. Handling precautions recommended. Human body model, 1.5k in series with 100pF.

**Note 4.** Applies to the VP, VM, RCV, OE#, SPD, and SUS pins.

**Note 5.** Applies to D+, D-.

**Note 6.** Not production tested. Guaranteed by design.

**Note 7.** Characterized specification(s), but not production tested.

**Note 8.** Specification for packaged product only.

## Applications Information

The MIC2550 is designed to provide USB connectivity in mobile systems where system supply voltages are not available to satisfy USB requirements. The MIC2550 can operate down to supply voltages of 2.5V and still meet USB physical layer specifications. As shown in the system diagram, the MIC2550 takes advantage of USB's supply voltage,  $V_{BUS}$ , to operate the transceiver. The system voltage,  $V_{IF}$ , is used to set the reference voltage used by the digital I/O lines (VP, VM, RCV, OE#, SPD, and SUS pins) interfacing to the system. Internal circuitry provides translation between the USB and system voltage domains.  $V_{IF}$  will typically be the main supply voltage rail for the system.

In addition, a 3.3V, 10% termination supply voltage,  $V_{TRM}$ , is provided to support speed selection. A 0.47 $\mu$ F (minimum) capacitor from  $V_{TRM}$  to ground is required to ensure stability. As shown in the typical application diagram, a 1 $\mu$ F capacitor is recommended. A 1.5K resistor is required between this pin and the D+ or D- lines to respectively specify full-speed or low-speed operation.

### Power Supply Configurations

#### $V_{IF}/V_{BUS}$ Switched

When the  $V_{BUS}$  input pin is pulled to ground a low impedance path between  $V_{IF}$  and  $V_{BUS}$  can cause a high current flow from  $V_{IF}$  to  $V_{BUS}$  thereby damaging the MIC2550. This issue can arise in systems where  $V_{BUS}$  is driven from a power supply that can be switched off such as in the case of a desktop PC. Adding a Schottky diode, such as the ZHCS1000 by Zetex, in series with  $V_{BUS}$  will prevent any current flow during this condition. A solution is shown in Figure 8 below.

Note: \*(Optional) See Text - Power Supply Configurations

**Figure 8. Solution to  $V_{IF}/V_{BUS}$  Switching**

#### I/O Interface Using 3.3V

In systems where the I/O interface utilizes a 3.3V USB controller, an alternate solution is shown in Figure 9. This configuration has the advantage over Figure 8, in that no extra components are needed. Ensure that the load on  $V_{TRM}$  does not exceed 1mA total.

**Figure 9. I/O Interface Uses 3.3V**

#### Internal 3.3V Source

If the device is self-powered and has 3.3V available, the circuit in Figure 10 is yet another power supply configuration option. In this configuration, the internal regulator is disabled and the 3.3V source and not  $V_{BUS}$  powers the entire chip.

**Figure 10. Powering Chip from Internal 3.3V Source**

#### Suspend

When the suspend pin (SUS) is high, power consumption is reduced to a minimum.  $V_{TRM}$  is not disabled. RCV,  $V_P$  and  $V_M$  are still functional to enable the device to detect USB activity. For minimal current consumption in suspend mode, it is recommended that  $OE\# = 1$ .

#### External ESD Protection

The use of ESD transient protection devices is not required for operation, but is recommended. We recommend the following devices or the equivalent:

Cooper Electronics Technologies ([www.cooperet.com](http://www.cooperet.com))  
41206ESDA SurgX<sup>®</sup>  
0805ESDA SurgX<sup>®</sup>

Littelfuse ([www.littelfuse.com](http://www.littelfuse.com))

V0402MHS05  
SP0503BAHT

#### Non-Multiplexed Bus

To save pin count for the USB logic controller interface, the MIC2550 was designed with  $V_P$  and  $V_M$  as bidirectional pins. To interface the MIC2550 with a non-multiplexed data bus, resistors can be used for low cost isolation as shown in Figure 11.

**Figure 11. MIC2550 Interface to Non-Multiplexed Data Bus**

## PCB Layout Recommendations

Although the USB standard and applications are not based in an impedance controlled environment, a properly designed PCB layout is recommended for optimal transceiver performance. The suggested PCB layout hints are as follows:

- Match signal line traces (VP/VM, D+, D-) to 40ps, approximately  $\frac{1}{3}$  inch if possible. FR-4 PCB material propagation is about 150ps/inch, so to minimize skew try to keep VP/VM, D+/D- traces as short as possible.
- For every signal line trace width (w), separate the signal lines by 1.5–2 widths. Place all other traces at >2 widths from all signal line traces.
- Maintain the same number of vias on each differential trace, keeping traces approximately at same separation distance along the line.
- Control signal line impedances to  $\pm 10\%$ .
- Keep  $R_S$  as close to the IC as possible, with equal distance between  $R_S$  and the IC for both D+ and D-.

Package Information

14-Pin TSSOP (TS)

TOP VIEW

BOTTOM VIEW

1. DIMENSIONS ARE IN mm.
2. DIE THICKNESS ALLOWABLE IS 0.305mm MAX.
3. PACKAGE WARPAGE MAX 0.05mm.
4. THIS DIMENSION APPLIES TO PLATED TERMINAL AND IS MEASURED BETWEEN 0.20mm AND 0.25mm FROM TIP.
5. APPLIES ONLY FOR TERMINALS

FOR EVEN TERMINAL/SIDE

Rev. 02

16-Pin MLF™ (ML)

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
