

# VHF-to-Microwave, +3V, General-Purpose Amplifiers

MAX2630-MAX2633

## General Description

The MAX2630/MAX2631/MAX2632/MAX2633 are low-voltage, low-noise amplifiers for use from VHF to microwave frequencies. Operating from a single +2.7V to +5.5V supply, these devices have a flat gain response to 900MHz. Their low noise figure and low supply current make them ideal for receive, buffer, and transmit IF applications.

The MAX2630/MAX2631 are biased internally, eliminating the need for external bias resistors or inductors. The MAX2632/MAX2633 have a user-selectable supply current, which can be adjusted by adding a single external resistor. This allows customized output power and gain according to specific applications requirements. The MAX2631/MAX2633 feature a shutdown pin that allows them to be powered down to less than 1µA supply current. Aside from a single bias resistor required for the MAX2632/MAX2633, the only external components needed for this family of amplifiers are input and output blocking capacitors and a VCC bypass capacitor.

The MAX2630 comes in a 4-pin SOT143 package, requiring minimal board space. The MAX2631/MAX2632 come in small 5-pin SOT23 packages. The MAX2633 comes in a 6-pin SOT23 package.

## Applications

- |                                |                 |
|--------------------------------|-----------------|
| Personal Communicating Systems | Cordless Phones |
| Global Positioning Systems     | Cellular Phones |
| Wireless Local Area Networks   | ISM Radios      |
| Wireless Local Loops           | TV Tuners       |
| Land Mobile Radios             | Set-Top Boxes   |

## Typical Operating Circuit

## Features

- ◆ Single +2.7V to +5.5V Operation
- ◆ Internally Biased (MAX2630/MAX2631)
- ◆ Adjustable Bias (MAX2632/MAX2633)
- ◆ 6.6mA Supply Current (insensitive to supply voltage)
- ◆ 1µA Shutdown Current (MAX2631/MAX2633)
- ◆ 3.7dB Noise Figure
- ◆ 13.4dB Gain
- ◆ Ultra-Small SOT Packages

## Ordering Information

PART	TEMP RANGE	PIN-PACKAGE	SOT TOP MARK*
MAX2630EUS-T	-40°C to +85°C	4 SOT143-4	DG__
MAX2631EUK-T	-40°C to +85°C	5 SOT23-5	AABK
MAX2632EUK-T	-40°C to +85°C	5 SOT23-5	AABL
MAX2633EUT-T	-40°C to +85°C	6 SOT23-6	AAAA

\*The first two letters in the SOT top mark identify the part, while the remaining two letters are the lot-tracking code.

## Pin Configurations

For pricing, delivery, and ordering information, please contact Maxim/Dallas Direct! at 1-888-629-4642, or visit Maxim's website at [www.maxim-ic.com](http://www.maxim-ic.com).

# VHF-to-Microwave, +3V, General-Purpose Amplifiers

## ABSOLUTE MAXIMUM RATINGS

V <sub>CC</sub> to GND	-0.3V to 6V
Input Power	5dBm
OUT Current	±12mA
IN to GND Voltage	-1.2V to 1.2V
Bias to GND Voltage	0.0V to 3V
Voltage at SHDN Input (MAX2631/MAX2633)	-0.3V to (V <sub>CC</sub> + 0.3V)
Current into SHDN Input (MAX2631/MAX2633)	100μA

Continuous Power Dissipation (T <sub>A</sub> = +70°C)	
SOT143 (derate 4mW/°C above +70°C)	320mW
SOT23-5 (derate 7.1mW/°C above +70°C)	571mW
SOT23-6 (derate 7.1mW/°C above +70°C)	571mW
Operating Temperature Range	-40°C to +85°C
Junction Temperature	+150°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (soldering, 10s)	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**CAUTION!** ESD SENSITIVE DEVICE

## ELECTRICAL CHARACTERISTICS

## Typical Operating Characteristics (continued)

( $V_{CC} = +3V$ ,  $V_{\overline{SHDN}} = V_{CC}$  (MAX2631/MAX2633),  $Z_0 = 50\Omega$ ,  $f_{IN} = 900MHz$ ,  $R_{BIAS} = 10k\Omega$  (MAX2632/MAX2633),  $T_A = +25^\circ C$ , unless otherwise noted.)

## Pin Description

PIN				NAME	FUNCTION
MAX2630	MAX2631	MAX2632	MAX2633		
3	5	5	6	IN	Amplifier Input. Use a series blocking capacitor with less than 3 $\Omega$ reactance at your lowest operating frequency.
2	2	2	2	GND	Ground Connection. For optimum performance, provide a low-inductance connection to the ground plane.
1	3	3	3	OUT	Amplifier Output. Use a series blocking capacitor with less than 3 $\Omega$ reactance at your lowest operating frequency.
4	4	4	4	$V_{CC}$	Supply Connection. Bypass directly at the supply pin. The value of the bypass capacitor is determined by the lowest operating frequency, and is typically the same as the blocking capacitor value. Additional bypassing may be necessary for long $V_{CC}$ lines.
—	1	—	1	$\overline{SHDN}$	Shutdown Input. Driving $\overline{SHDN}$ with a logic low turns off the amplifier.
—	—	1	5	BIAS	Bias Resistor Connection. Connect a resistor to GND to set the bias current. See the Supply Current vs. $R_{BIAS}$ graph in the <i>Typical Operating Characteristics</i> .

# VHF-to-Microwave, +3V, General-Purpose Amplifiers

MAX2630-MAX2633

## Detailed Description

The MAX2630-MAX2633 are broadband amplifiers with 3dB bandwidth greater than 1GHz. Their small size and internal bias circuitry make them ideal for applications where board space is limited. The MAX2632/MAX2633 have a user-selectable bias current that allows the user to set both gain and output power for a particular application, and the MAX2631/MAX2633 incorporate shut-down capability.

## Applications Information

### External Components

The MAX2630-MAX2633 are easy to use, as shown in the *Typical Operating Circuit* and Figures 1, 2 and 3. Input and output series capacitors may be necessary to block DC bias voltages generated by the amplifiers from interacting with adjacent circuitry. These capacitors must be large enough to contribute negligible reactance in a 50Ω system at the minimum operating frequency. Use the following equation to calculate their minimum value:

$$C_{\text{BLOCK}} = \frac{53,000}{f} \text{ (pF)}$$

where  $f$  (in megahertz) is the minimum operating frequency.

The  $V_{\text{CC}}$  pin must be RF bypassed for correct operation. To accomplish this, connect a capacitor between the  $V_{\text{CC}}$  pin and ground, as close to the package as is practical. Use the same equation given above (for DC-blocking capacitor values) to calculate the minimum capacitor value. If the PC board has long  $V_{\text{CC}}$  lines, additional bypassing may be necessary. This can be done farther away from the package, if needed.

Proper grounding of the GND pin is essential. If the PC board uses a topside RF ground, connect it directly to the GND pin. For a board where the ground plane is not on the component side, the best technique is to connect the GND pin to it with a plated through-hole close to the package.

An on-chip buffer at the MAX2631/MAX2633's SHDN pin makes bypassing this pin unnecessary except in very noisy applications. When RF filtering is needed, use a bypass capacitor similar to the one used on  $V_{\text{CC}}$ . Since negligible current flows into this pin, additional RF filtering may be done with a series resistor.

To set the MAX2632/MAX2633's supply current, connect a resistor from the BIAS pin to ground. To estimate the value of this resistor, refer to the graph Supply Current vs.  $R_{\text{BIAS}}$  in the *Typical Operating Characteristics*.

## PC Board Layout Example

Example PC board layouts are given in Figures 4 to 7. They use FR-4 with a 31mil layer thickness between the RF lines and the ground plane. The boards satisfy all of the above recommendations.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
