## ◆ Cable assembly procedure

The cable ends are processed as shown in the drawing. For the dimensions  $L_1$ , refer to Table 1, which shows dimensions arranged L by part number.

- (1) Insert clamp from tip of cable and fold outer conductor of cable back onto clamp. Using a knife, cut off excess outer conductor left at this time.
- (2) Cut off center conductor of cable at  $L_2$ , from surface A of cable insulation. For dimensions of  $L_2$  and  $L_3$ , refer to Table 1.  $L_3$  is a reference dimension.
- (3) Solder cable center conductor and male contact (or female contact). It is a good idea at this time to solder the contact preliminarily in advance.  
(Note: There must be no gap between the contact and the cable insulation.)

Insert cable and parts into shell and fit sharp end of clamp completely into V-shaped surface of gasket. Tighten tightening nut sufficiently.

■ Remarks

1. The cable dimensions L are based on the MIL and DSP standards. They may differ somewhat depending on the type of cable. In such cases, match the dimensions with the connectors.
2. Some clamps and gaskets does not have not V-shaped, but the assembling procedures are the same.
