

700mA High Speed Dual LDO Regulator

■ GENERAL DESCRIPTION

The XCM406A series is a high current, dual LDO regulator in an ultra small USP-12B01 package which measures just 2.8mm x 2.3mm. The IC is basically two XC6210 high speed CMOS LDOs which are precise, low noise, high current, regulators consisting of a voltage reference, an error amplifier, a current limiter and phase compensation circuit plus a driver transistor. The low ON resistance of the built-in driver transistor means that batteries can be used to a minimal input-output voltage differential and can therefore be used for a longer time. The series can be used with low ESR ceramic capacitors and output voltages are selectable in 0.05V increments within a range of 0.8V to 5.0V per channel. The fold-back current limit circuit also operates as the output current limiter and the output pin protector.

The IC can be placed in stand-by mode via the CE function so that power consumption is greatly reduced.

■ APPLICATIONS

- Mobile phone
- Bluetooth equipment
- Portable AV equipment
- Portable gaming equipment

■ FEATURES

Maximum Output Current	: 700mA (TYP. 800mA limit) ($1.6V \leq V_{OUT} \leq 5.0V$)
Dropout Voltage	: 50mV@ $I_{OUT}=100mA$
Operating Voltage Range	: 1.5V ~ 6.0V
Output Voltage Setting Range	: 0.8V ~ 5.0V (0.05V increments)
Accuracy	: $\pm 2\%$
Low Power Consumption	: 35 μA (TYP.)
High Ripple Rejection	: 60dB @ 1kHz
Operating Temperature Range	: - 40 °C ~ 85 °C
Package	: USP-12B01
Environmentally Friendly	: EU RoHS Compliant, Pb Free

■ TYPICAL APPLICATION CIRCUIT

* The dotted lines in the circuit indicates the connection using through-holes at the backside of the PC board

PIN CONFIGURATION

PIN ASSIGNMENT

PIN NUMBER	XCM406A	FUNCTION
1	V _{IN1}	Power Input1
2	NC	No Connection
3	V _{SS1}	Ground1
4	V _{IN2}	Power Input2
5	NC	No Connection
6	V _{SS2}	Ground2
7	V _{OUT2}	Output2
8	NC	No Connection
9	EN2	ON/OFF Control2
10	V _{OUT1}	Output1
11	NC	No Connection
12	EN1	ON/OFF Control1

* A dissipation pad on the reverse side of the package is electrically isolated.

*1: Electrical potential of the XC6210 series' dissipation pad should be the V_{SS} level.

*2: Electrical potential of the XC6210 series' dissipation pad should be the V_{SS} level.

Care must be taken for an electrical potential of each dissipation pad so as to enhance mounting strength and heat release when the pad needs to be connected to the circuit.

■ TEST CIRCUITS

● Circuit ①

● Circuit ②

● Circuit ③

■ OPERATIONAL EXPLANATION

The voltage, divided by resistors R1 & R2, which are connected to the V_{ROUT} pin is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET connected to the V_{ROUT} pin is then driven by the subsequent output signal. The output voltage at the V_{OUT} pin is controlled and stabilized by negative feedback. The constant current limit circuit and short circuit protection operate in relation to the level of output current.

<Low ESR Capacitor>

With the XCM406 series regulator, a stable output voltage is achievable even if low ESR capacitors are used, as a phase compensation circuit is built into the regulator. In order to ensure the effectiveness of the phase compensation, we suggest that an output capacitor (C_L) will be connected as close as possible between the output pin (V_{ROUT}) and the V_{SS} pin. Please use an output capacitor (C_L) with a capacitance based on the chart below. We also suggest an input capacitor (C_{IN}) of $1\mu F$. This should be connected between V_{IN} and V_{SS} in order to stabilize input power source.

Output Capacitor Corresponding Table

V_{OUT}	0.8V ~ 1.45V	1.5V ~ 1.75V	1.8V ~ 5.0V
C_L	$\geq 6.8\mu F$	$\geq 4.7\mu F$	$\geq 1.0\mu F$

<Current Limiter, Short-Circuit Protection>

The XCM406 series regulator offers a combination of current limit and short circuit protection by means of a built-in fixed current limiter circuit and a foldback circuit. When drops further and output current decreases. When the output pin is shorted, a current of about 50mA flows. the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, the output voltage

<EN Pin>

The IC's internal regulator circuitry can be shut down via the signal from the EN pin with the XC6210 series. In shutdown mode, output at the V_{ROUT} pin will be pulled down to the V_{SS} level via R1 & R2. Options are available for the EN pin logic (See the product classification). Note that as the XCM406AA types are 'High Active / No Pull-Down', operations will become unstable with the EN pin open. Although the EN pin is equal to an inverter input with CMOS hysteresis, with either the pull-up or pull-down options, the CE pin input current will increase when the IC is in operation. We suggest that you use this IC with either a V_{IN} voltage or a V_{SS} voltage input at the EN pin. If this IC is used with the correct specifications for the EN pin, the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry if a voltage other than V_{IN} or V_{SS} is applied.

■ NOTES ON USE

1. Please use this IC within the stated maximum ratings. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please strengthen V_{IN} and V_{SS} wiring in particular.
3. Please wire the input capacitor (C_{IN}) and the output capacitor (C_L) as close to the IC as possible. When rapid input fluctuation or load fluctuation occurs, please increase the capacitor value such as C_{IN} or C_L to stabilize the operation.
4. The two dies in the same package are closely placed so that one heat generation affects the other.
Heat dissipation should be evaluated on the actual board design before finalizing. In case of light load operation like 100 μA below, but the other side is heavy load operation, the light load output voltage may happen to be elevated up to the input voltage level as a result of leakage current. As a counter measure when it happened, adding one resistor between V_{OUT} and V_{SS} pins is recommended.
5. Torex places an importance on improving our products and its reliability.
However, by any possibility, we would request user fail-safe design and post-aging treatment on system or equipment.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
