**Operation Procedures:**

**Symbol Definitions**

In the description below, signals are defined in terms of the key or switch which is activated.

- Off Hook means the phone was taken off the hook.
- On Hook means that the receiver is on the hook.
- D1 or L1 stands for the first digit dialed in a string of digits.
- Dn or Ln stands for the last digit dialed in a string of digits.
- Dn+1 stands for the beginning of a new string of digits.
- Dn+m stands for the last digit in a new string of digits.
- ⌋ Input Level from High to Low.

Mn=M1~M3; Ln=0~9; Dn=0~9,\*,#,Pause.

**1. Normal Dialing**

Off Hook (or On Hook & HFI ⌋),  
D1, D2, ..., Dn

- 1.D1, D2, ... , Dn will be dialed out.
- 2.Dialing length is unlimited, but the Redial is inhibited if it oversteps 32 digits.

**2. Redialing**

Off Hook, D1, D2, ... , Dn, BUSY,  
 Come On Hook, Off Hook (or On Hook & HFI ⌋), R/P (or On Hook & HFI ⌋, D1, D2, ... , Dn), BUSY,  
HFI ⌋, Come HFI ⌋, R/P

The R/P key can execute Redial function only in first key-in after Off Hook, otherwise it will be Pause function.

**3. Number store**

1. Off Hook (or On Hook & HFI ⌋),  
D1, D2, ..., Dn, ST, ST, Mn or Ln  
On Hook (or On Hook & HFI ⌋)

- a.The dialing of D1, D2, ... , Dn must have finished, then ST key may be pressed.
- b.D1, D2, ... , Dn will be stored in Mn or Ln memory location and they will be dialed out.

2. Off Hook (or On Hook & HFI ⌋),  
ST, D1, D2, ..., Dn, ST, Mn or Ln  
On Hook (or On Hook & HFI ⌋)

- a.D1, D2, ... , Dn will be stored in Mn or Ln memory location but they will not be dialed out.
- b.R/P and \*/T keys can be stored as a digit in memory. In store mode, R/P in the pause function key.
- c.The store mode can be release after the store function is executed or the present state of hook switch is changed.

**4. Repertory Dialing**

1. Off Hook (or On Hook & HFI ⌋) Mn  
 2. Off Hook (or On Hook & HFI ⌋) A,  
Ln

**5. Access Pause**

Off Hook (or On Hook & HFI ⌋),  
D1, D2, R/P, D3, ..., Dn

- 1.The Pause function can be stored in memory.
- 2.The Pause function is executed in normal dialing or Redialing or memory dialing.

**6. Pulse to Tone (\*T)**

Off Hook (or On Hook & HFI ⌋),  
D1, D2, ..., Dn, \*/T,  
Dn+1, Dn+2, ..., Dn+m

- 1.If the mode switch is set in Pulse mode, then the output signal will be:  
 D1, D2, ... , Dn, Pause  
 (Pulse)  
 Dn+1, Dn+2, ... , Dn+m  
 (Tone)
- 2.If the mode switch is set in Tone mode, then the output signal will be:  
 D1, D2, ... , Dn,  
 (Tone)  
 , \* , Dn+1, Dn+2, ... , Dn+m  
 (Tone) (Tone)
- 3.It can be reset to Pulse mode only in operation of On Hook, because it's still in Tone mode when the digits have been dialed out.

**7. Flash**

1. Flash key can not be stored as a digit in memory and it has the first priority of the keyboard function.
2. The system will return to the initial state after the break time is finished.

**8. Mix Dialing**

1. Normal dialing + Repertory dialing + Normal dialing

2. Repertory dialing + Normal dialing + Repertory dialing

3. Redialing + Normal dialing + Repertory dialing

a. Redialing and Save dialing are valid just for first key in.

b. The second sequence should not be operated until the first sequence is dialed out completely.

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V<sub>IN</sub> and V<sub>OUT</sub> should be constrained to the range GND ≤ (V<sub>IN</sub> or V<sub>OUT</sub>) ≤ V<sub>CC</sub>.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or V<sub>CC</sub>). Unused outputs must be left open.
