

# Precision 600MHz to 7GHz, RF Detector with Adjustable Gain and 12MHz Baseband Bandwidth

## FEATURES

- Temperature Compensated Internal Schottky Diode RF Detector
- Wide Input Frequency Range: 600MHz to 7GHz\*
- Wide Input Power Range: -32dBm to 10dBm
- External Gain Control
- Precision  $V_{OUT}$  Offset Control
- Low Starting Voltage: 200mV for Gain = 2
- Wide  $V_{CC}$  Range of 2.7V to 5.5V
- Low Operating Current: 2mA
- Available in a Low Profile (1mm) SOT-23 Package

## APPLICATIONS

- 802.11a, 802.11b, 802.11g, 802.15, 802.16
- Multimode Mobile Phone Products
- Optical Data Links
- Wireless Data Modems
- Wireless and Cable Infrastructure
- RF Power Alarm
- Envelope Detector

## DESCRIPTION

The LTC<sup>®</sup>5535 is an RF power detector for RF applications operating in the 600MHz to 7GHz range. A temperature compensated Schottky diode peak detector and output amplifier are combined in a small ThinSOT<sup>™</sup> package. The supply voltage range is optimized for operation from a single cell lithium-ion or three cell NiMH battery.

The RF input voltage is peak detected using an on-chip Schottky diode. The detected voltage is buffered and supplied to the  $V_{OUT}$  pin.

The LTC5535 output amplifier gain is set via external resistors. The initial starting voltage of 200mV can be precisely adjusted using the  $V_{OS}$  pin.

The LTC5535 operates with input power levels from -32dBm to 10dBm. The 12MHz baseband bandwidth is much higher than that of previous Schottky detector products.

**LT**, LTC and LT are registered trademarks of Linear Technology Corporation. ThinSOT is a trademark of Linear Technology Corporation.

\*Higher frequency operation is achievable with reduced performance. Consult factory for more information.

## TYPICAL APPLICATION

**Output Voltage vs RF Input Power**

## PIN FUNCTIONS

**RF<sub>IN</sub> (Pin 1):** RF Input Voltage. Referenced to V<sub>CC</sub>. A coupling capacitor must be used to connect to the RF signal source. The frequency range is 600MHz to 7GHz. This pin has an internal 500Ω termination, an internal Schottky diode detector and a peak detector capacitor.

**GND (Pin 2):** Ground.

**V<sub>OS</sub> (Pin 3):** V<sub>OUT</sub> Offset Voltage Adjustment. From 0V to 200mV, V<sub>OUT</sub> does not change. Above 200mV, V<sub>OUT</sub> will track V<sub>OS</sub>.

**V<sub>M</sub> (Pin 4):** Negative Input to Output Amplifier.

**V<sub>OUT</sub> (Pin 5):** Detector Output.

**V<sub>CC</sub> (Pin 6):** Power Supply Voltage, 2.7V to 5.5V. V<sub>CC</sub> should be bypassed appropriately with ceramic capacitors.

## BLOCK DIAGRAM

## APPLICATIONS INFORMATION

### Operation

The LTC5535 RF detector integrates several functions to provide RF power detection over frequencies ranging from 600MHz to 7GHz. These functions include an internal frequency compensated output amplifier, an RF Schottky diode peak detector and a level shift amplifier to convert the RF input signal to DC. The LTC5535 has both gain setting and voltage offset adjustment capabilities.

### Output Amplifier

The output amplifier is capable of supplying typically 20mA into a load. The negative terminal  $V_M$  is brought out to a pin for gain selection. External resistors connected between  $V_{OUT}$  and  $V_M$  ( $R_A$ ) and  $V_M$  to ground ( $R_B$ ) will set the gain of this amplifier.

$$\text{Gain} = 1 + R_A/R_B$$

The amplifier is not unity gain stable; a minimum gain of two is required. The output amplifier has a bandwidth of 20MHz with a gain of 2. For increased gain applications, the bandwidth is reduced according to the formula:

$$\text{Bandwidth} = 40\text{MHz}/(\text{Gain}) = 40\text{MHz} \cdot R_B/(R_A + R_B)$$

For stable operation the gain setting resistors should be low values and the board capacitance on  $V_M$  should be minimized.  $R_B$  is recommended to be no greater than 500 $\Omega$  for all gain settings.

The  $V_{OS}$  input controls the DC input voltage to the output amplifier.  $V_{OS}$  must be connected to ground if the DC output voltage is not to be changed. The output amplifier is initially trimmed to 200mV (Gain = 2) with  $V_{OS}$  connected to ground.

The  $V_{OS}$  pin is used to change the initial  $V_{OUT}$  starting voltage. This function, in combination with gain adjustment enables the LTC5535 output to span the input range of a variety of analog-to-digital converters.  $V_{OUT}$  will not change until  $V_{OS}$  exceeds 200mV. The starting voltage at  $V_{OUT}$  for  $V_{OS} > 200\text{mV}$  is:

$$V_{OUT} = 0.5 \cdot V_{OS} \cdot \text{Gain}$$

where gain is the output amplifier gain. For a gain of 2,  $V_{OUT}$  will exactly track  $V_{OS}$  above 200mV.

### RF Detector

The internal RF Schottky diode peak detector and level shift amplifier converts the RF input signal to a low frequency signal. The detector demonstrates excellent efficiency and linearity over a wide range of input power. The Schottky diode is biased at about 50 $\mu\text{A}$  and drives a 5pF internal peak detector capacitor.

Demo Board Schematic

## APPLICATIONS INFORMATION

### Applications

The LTC5535 can be used as a self-standing signal strength measuring receiver for a wide range of input signals from  $-32\text{dBm}$  to  $10\text{dBm}$  for frequencies from  $600\text{MHz}$  to  $7\text{GHz}$ .

The LTC5535 offers increased baseband bandwidth compared to other Schottky diode detectors. Table 1 shows that the baseband (demodulation) bandwidth is typically  $12\text{MHz}$  at an RF input signal level of  $-10\text{dBm}$ . The baseband bandwidth is largely independent of the RF input signal frequency over the range of  $600\text{MHz}$  to  $7\text{GHz}$ .

**Table 1**

INPUT LEVEL (dBm)	OUTPUT BW -3dB (MHz)	FREQUENCY (GHz)	GAIN
-20	12.5	3	2
-10	12	3	2
-5	11	3	2
0	9.5	3	2

Operation at higher RF input frequencies is achievable. Consult factory for more information.

The LTC5535 can be used as a demodulator for AM and ASK modulated signals. Depending on specific application needs, the RSSI output can be split between two branches, providing AC-coupled data (or audio) output and a DC-coupled RSSI output for signal strength measurements and AGC.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:
