

## 1/3, 1/4 Duty LCD Driver

### ■ GENERAL DESCRIPTION

**NJU6533** is a 1/3 or 1/4 duty segment type LCD driver. It incorporates 4 common driver circuits and 32 segment driver circuits. **NJU6533** can drive maximum 96 segments in 1/3 duty ratio and maximum 128 segments in 1/4 duty ratio. In addition, the **NJU6533's** useful functions and small package meet a wide range of applications.

### ■ PACKAGE OUTLINE

**NJU6533C**      **NJU6533KQ1**

**NJU6533FA2**      **NJU6533FH2**      **NJU6533FR3**

### ■ FEATURES

- LCD driving circuit :Max. 32outputs (4 outputs as for general purpose ports)
- Programmable Duty Ratio
  - 1/3 duty ratio :Driving max. 96 segments
  - 1/4 duty ratio :Driving max. 128 segments
- Programmable Bias Ratio :1/2, 1/3 bias ratio
- Serial Data Transfer :Shift clock max. 2MHz
- Built-in Oscillator :CR oscillation with external resistor, or external oscillation signal input
- Display OFF :INHb terminal
- Operating Voltage :3V / 5.0V
- C-MOS Technology :P-Sub
- Package Outline :Bare Chip, QFN48-Q1, QFP52-A2, LQFP52-H2, LQFP48-R3

## ■ FUNCTION DESCRIPTION

### (1) Block Function

- Oscillator  
The oscillator includes a built-in capacitor and an external resistor. It generates clock signal for LCD driving. When use external clock, input the clock signal to OSC1 and keep OSC2 open.
- Decoder  
Input serial data is decoded and sent to the appropriate block.
- Command Register  
Command data is written to this 8 bits command register to control **NJU6533** operation.
- Display Data Register  
Data is written to this 8 bits register as display data.
- Latch Circuit  
Data stored in display data register is assigned to the corresponding SEG/port.
- Segment Driver/General Purpose Ports  
Basing on display data, segment drivers output LCD SEG driving signal.  
And, SEG29/P1 ~ SEG32/P4 terminals can be selected as segment driver output or general-purpose ports by instruction.
- Common Driver  
Common drivers output LCD COM driving signal.
- Power On Reset  
When power is on, **NJU6533** is automatically initialized. And if RSTb="L", **NJU6533** is reset too.

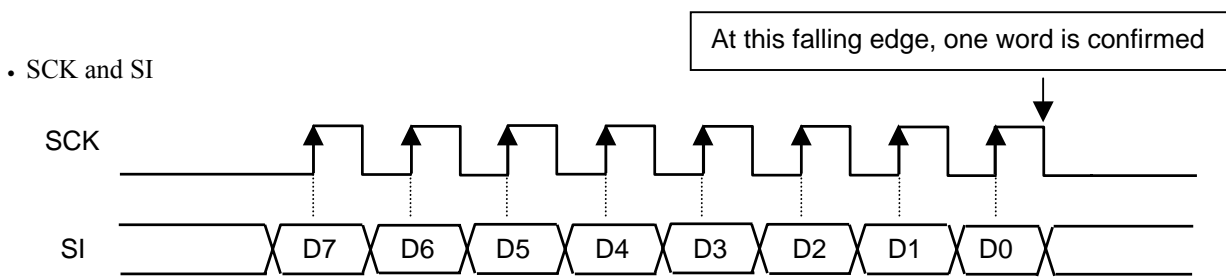

## (2) Serial Data Transfer

The transfer of an 8-bit/word serial data is conducted by synchronizing clock via interface with CPU. During CSb="L", serial data is obtainable and will be read in at the rising edge of SCK signal.

After CSb becoming low, if the first word is address data, the after data can be transferred continually and interrupted as display data even if CSb maintained low. In this case, every 8 bits data will be confirmed as a word either by the falling edge of the 8<sup>th</sup> SCK clock or by the rising edge of the CSb clock.

After CSb becoming low, if the first word is command data, the after data is invalid even though transfer can be continued without changing the polarity of CSb.

At the falling edge of CSb, SCK can be either "H" or "L", but, at the rising edge of CSb, SCK must be low.

Serial Interface Format

(3) Command Register

Command Register is used to set the duty ratio, the bias ratio, and the SEG driver/general purpose ports. When the D7 to D5 bits of the 1<sup>st</sup> word are (1,0,0), the D4 ~ D0 bits are recognized as command data.

The contents of Command Register will be initialized as following when applying Power On Reset or Reset.

**The Default Value of Command Register**

- Duty ratio : 1/4
- Bias ratio : 1/3
- SEG driver/General purpose ports : SEG drivers(SEG29, SEG30, SEG31, SEG32)

• Duty Ratio

DS	Duty ratio
0	1/4
1	1/3

\*) Do not change the duty ratio during display ON.

• Bias ratio

BS	Bias ratio
0	1/3
1	1/2

• SEG driver or general purpose ports

TSEL2	TSEL1	TSEL0	SEG29/P1	SEG30/P2	SEG31/P3	SEG32/P4
0	0	0	SEG29	SEG30	SEG31	SEG32
0	0	1	SEG29	SEG30	SEG31	P4
0	1	0	SEG29	SEG30	P3	P4
0	1	1	SEG29	P2	P3	P4
1	0	0	P1	P2	P3	P4

\*\*\*) If TSEL2 ~ TSEL0 is set to (1, 0, 1), (1, 1, 0), (1, 1, 1) all outputs are used as segment drivers.

## (4) Output Address Counter

Output Address Counter will specify the addresses of the SEG and COM drivers for the display data.

When the MSB (D7 to D4) of the 1<sup>st</sup> data is "0111", the LSB 4 bits (D3 to D0) specify the addresses of COM and SEG drivers, and the 2<sup>nd</sup> data is the display data which will be sent to the 1<sup>st</sup>-data-specified drivers. At the same time, SEG and COM driver addresses will be increased automatically in turn as shown in **Table 1**. In other words, as of the SEG and COM driver addresses specified by the first data in the Output Address Counter, display data can be transferred to the SEG and COM drivers without further address setting.

The address setting range is from "0000" to "1111", if transfer data outnumber the address number which are from D3 ~ D0 to "1111", the SEG and COM driver address will be reset to "0000" and renew the auto-increment operation.

### • Address Data

- ◇ If general purpose ports are selected by Command Register, under (C1, C0, S1, S0)=(0, 0, 1, 1), D3 ~ D0 bits are the addresses of (P1, P2, P3, P4) ports which corresponds to (SEG29, SEG30, SEG31, SEG32).
- ◇ When SEG29~SEG32 are set as general purpose output ports, data for SEG29~SEG32 during COM2~COM4 scanning will be ignored.
- ◇ When duty ratio is 1/3, do not set address between "1100"~"1111".  
Otherwise, unexpected address way be setup.

(5) Display OFF Function (INHb)

When INHb="L"

- All segment and common terminal output  $V_{SS}$   
(When general purpose output ports are selected, even INHb="L", these ports can output data)
- Suspending Oscillation (but, if RSTb="L", oscillator works)
- $V_1$  and  $V_2$  become "H" (no current pass through the bleeder resistors)

Even during INHb="L", interface can be accessed, and data can be written into the command register, address counter and data register.

(6) Power ON Reset

After power ON, **NJU6533** is initialized to the following values:

- Address counter (C1, C0, S1, S0)=(0, 0, 0, 0)
- Display Data Register all "0"
- Duty ratio 1/4duty
- Bias ratio 1/3 bias
- Segment/General purpose port: Segment output(SEG29, SEG30, SEG31, SEG32)

Note-1) Do not exceed the absolute maximum ratings, otherwise the stress may cause a permanent damage to the IC. It is also recommended that the IC be used within the range specified in the DC electrical characteristics, or the electrical stress may cause mulfuctions and impact on the reliability.

Note-2) All voltages are relative to  $V_{SS}=0V$  reference.

Note-3) The following relationship shall be maintained.

$$V_{LCD} \geq V_1 \geq V_2 \geq V_{SS}, V_{LCD} \geq V_{DD}, \text{ and } V_{LCD} \text{ shall be input after } V_{DD}.$$

Note-4) To stabilize the LSI operation, place decoupling capacitors between  $V_{DD}-V_{SS}$  and between  $V_{LCD}-V_{SS}$ .

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNIT
Power-on Rising Time	$t_{rDD}$		0.1		5	ms
Power-off Time	$t_{OFF}$		1			ms

Note 10)  $t_{OFF}$  is the off time when power-supply turns off suddenly or cycles on/off.

## APPLICATION CIRCUIT

- 1/4 duty, 1/3 bias

- 1/4 duty, 1/2 bias

Note) Because display data is not yet stable just after  $V_{DD}$  on, if LCD panel is turned on, unexpected pattern will be displayed, therefore, keep INHb terminal to "L" level until data transfer from MPU is over.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
