
0.8% Low Voltage Detector with Output Delay for Industrial Applications

NO.EA-347-170203

OUTLINE

The R3116x is a CMOS-based voltage detector IC with high detector threshold accuracy and ultra-low supply current, which can be operated at an extremely low voltage and is used for system reset as an example.

This IC consists of a voltage reference unit, a comparator, resistors for detector threshold setting, an output driver, a hysteresis circuit and an output delay circuit. The detector threshold is internally fixed with high accuracy and does not require any adjustment.

Two output types, Nch open drain type and CMOS type are available.

R3116x is offered in a 5-pin SOT-23-5 package and an ultra-small 4-pin DFN(PLP)1010-4 package which can achieve the smallest possible footprint solution on boards where area is limited.

This is a high-reliability semiconductor device for industrial applications (-Y) that has passed both the screening at high temperature and the reliability test with extended hours. This line of products operate in a wide temperature range from low temperature to high temperature to support harsh environment applications.

FEATURES

- Operating Voltage Range (Maximum Rating)0.5V to 6.0V (7.0V)
- Operating Temperature Range -50°C to 105°C
- Supply Current Typ. 0.35μA (-V_{DET}=1.5V, V_{DD}=-V_{DET}+1V)
- Detector Threshold Range0.7V to 5.0V (0.1V steps)
- Detector Threshold Accuracy±0.8% (-V_{DET} ≥ 1.5V)
- Temperature-Drift Coefficient of Detector Threshold Typ. ±30ppm/°C
- Built-in Output Delay Circuit Typ. 100ms with an external capacitor: 0.022μF
- Output Delay Time Accuracy±15% (-V_{DET} ≥ 1.5V)
- Output Types Nch Open Drain and CMOS
- Packages DFN(PLP)1010-4, SOT-23-5

APPLICATIONS

- Industrial equipments such as FAs and smart meters
- Equipments used under high-temperature conditions such as surveillance camera and vending machine
- Equipments accompanied by self-heating such as motor and lighting

SELECTION GUIDE

The package type, the detector threshold, the output type and the taping type for the ICs can be selected at the users' request.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R3116Kxx1*-TR-Y	DFN(PLP)1010-4	10,000 pcs	Yes	Yes
R3116Nxx1*-TR-YE	SOT-23-5	3,000 pcs	Yes	Yes

xx : The set detector threshold ($-V_{SET}$) can be designated in the range from 0.7V(07) to 5.0V(50) in 0.1V steps.

* : Designation of Output Type
 (A) Nch Open Drain
 (C) CMOS

PIN DESCRIPTIONS

• DFN(PLP)1010-4

• SOT-23-5

• DFN(PLP)1010-4

Pin No.	Symbol	Description
1	OUT	Output Pin ("L" at detection)
2	C_D	Pin for External Capacitor (for setting output delay)
3	GND	Ground Pin
4	V_{DD}	Input Pin

*) The tab on the bottom of the package enhances thermal performance and is electrically connected to GND (substrate level). It is recommended that the tab be connected to the ground plane on the board, or otherwise be left open.

• SOT-23-5

Pin No.	Symbol	Description
1	OUT	Output Pin ("L" at detection)
2	V_{DD}	Input Pin
3	GND	Ground Pin
4	NC	No Connection
5	C_D	Pin for External Capacitor (for setting output delay)

ABSOLUTE MAXIMUM RATINGS

Symbol	Item		Rating	Unit
V _{DD}	Supply Voltage		7.0	V
V _{OUT}	Output Voltage (Nch Open Drain Output)		V _{SS} -0.3 to 7.0	V
	Output Voltage (CMOS Output)		V _{SS} -0.3 to V _{DD} +0.3	
I _{OUT}	Output Current		20	mA
P _D	Power Dissipation (DFN(PLP)1010-4)*	Standard Land Pattern	400	mW
	Power Dissipation (SOT-23-5) *	Standard Land Pattern	420	
T _j	Junction Temperature		-50 to 125	°C
T _{stg}	Storage Temperature Range		-55 to 125	°C

* Please refer to *PACKAGE INFORMATION* for detailed information.

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings are not assured.

RECOMMENDED OPERATING CONDITIONS

Symbol	Item	Rating	Unit
V _{DD}	Operating Voltage	0.60 to 6.0	V
T _a	Operating Temperature Range	-50 to 105	°C

RECOMMENDED OPERATING CONDITIONS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

ELECTRICAL CHARACTERISTICS

The specifications surrounded by are guaranteed by design engineering at $-50^{\circ}\text{C} \leq T_a \leq 105^{\circ}\text{C}$.

				$1.5\text{V} \leq -V_{\text{DET}} \leq 5.0\text{V}$	75		135	

All of unit are tested and specified under load conditions such that $T_j \approx T_a = 25^{\circ}\text{C}$

*1 Minimum operating voltage means the value of input voltage when output voltage maintains 0.1V or less.
(In case of Nch Open Drain Output type, the output pin is pulled up with a resistance of 470k Ω to 5.0V)

*2 In case of CMOS type

*3 In case of Nch Open Drain type

TIMING CHART

When the supply voltage, which is higher than released voltage, is forced to V_{DD} pin, charge to an external capacitor starts, then C_D pin voltage increases. Until the C_D pin voltage reaches to C_D pin threshold voltage, output voltage maintains "L". When the C_D pin voltage becomes higher than C_D pin threshold voltage, output voltage is reversed from "L" to "H". Where the time interval between the rising edge of supply voltage and output voltage reverse point means output delay time.

When the output voltage reverses from "L" to "H", the external capacitor starts to discharge. Therefore, when lower voltage than the detector threshold voltage is forced to V_{DD} pin, the output voltage reverses from "H" to "L" thus the detect delay time is constant not being affected by the external capacitor.

• Output Delay Time

Output Delay Time (t_d) can be calculated with the next formula using the external capacitor:

$$t_d(s) = 4.5 \times 10^6 \times C_D(F)$$

DEFINITION OF OUTPUT DELAY TIME

Output Delay Time (t_d) is defined as follows:

1. In the case of Nch Open Drain Output:

Under the condition of the output pin (OUT) is pulled up through a resistor of 470k Ω to 5V, the time interval between the rising edge of V_{DD} pulse from $(-V_{DET})-0.1V$ to $(-V_{DET})\times 1.1V$ pulse voltage is supplied, the becoming of the output voltage to 2.5V.

2. In the case of CMOS Output:

The time interval between the rising edge of V_{DD} pulse from $(-V_{DET})-0.1V$ to $(-V_{DET})\times 1.1V$ pulse voltage is supplied, the becoming of the output voltage to $((-V_{DET})\times 1.1V)/2$.

*Note2) 1. In the case of CMOS output type:
When the voltage is forced from (-VDET)-0.1V to (-VDET)×1.1V pulse voltage is added to VDD, time interval that the output voltage reaches ((-VDET)×1.1V)/2.

2. In the case of Nch Open Drain output type:
The output pin is pulled up to 5.0V through 470kΩ, and when the voltage is forced from (-VDET)-0.1V to (-VDET)×1.1V pulse voltage is added to VDD, time interval that the output voltage reaches 2.5V.

TYPICAL APPLICATION

• R3116xxx1A CPU Reset Circuit 1 (Nch Open Drain Output)

Case1. Input Voltage to R3116xxx1A is equal to Input Voltage to CPU

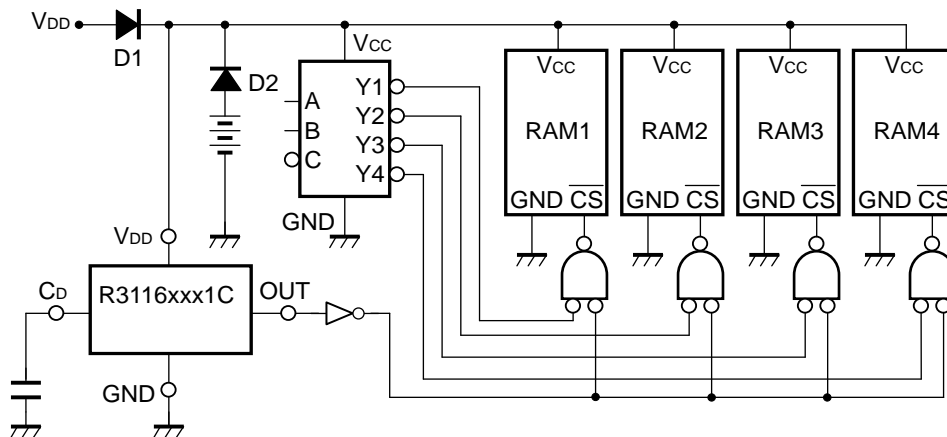

Case2. Input Voltage to R3116xxx1A is unequal to Input Voltage to CPU

• R3116xxx1C CPU Reset Circuit 2 (CMOS Output)

• Memory Back-up Circuit

• **Voltage level Indicator Circuit (lighted when the power runs out)
(Nch Open Drain Output)**

• **Detector Threshold Adjustable Circuit 1
(Nch Open Drain Output)**

Adjustable Detector Threshold= $(-V_{DET}) \times (R_a + R_b) / R_b$

Hysteresis Voltage= $(V_{HYS}) \times (R_a + R_b) / R_b$

- *1) To prevent oscillation, set $R_a \leq 1k\Omega$, $R_b \leq 100\Omega$.
- *2) If the value of R_a is set excessively large, voltage drop may occur caused by the supply current of IC itself, and detector threshold and hysteresis voltage may vary.
- *3) If V_{up} and V_{DD} are connected, the voltage dropdown caused by R_{up} , may cause difference in the hysteresis voltage.

• **Detector Threshold Adjustable Circuit 2
(Nch Open Drain Output)**

Adjustable Detector Threshold= $(-V_{DET}) \times (R_a + R_b) / R_b$

Hysteresis Voltage= $(V_{HYS}) \times (R_a + R_b) / R_b$

- *1) To prevent oscillation, set $R_a \leq 10k\Omega$, $R_b \leq 1k\Omega$, $C \geq 1\mu F$.
- *2) If the value of R_a is set excessively large, voltage drop may occur caused by the supply current of IC itself, and detector threshold and hysteresis voltage may vary.
- *3) If V_{up} and V_{DD} are connected, the voltage dropdown caused by R_{up} , may cause difference in the hysteresis voltage.
- *4) If the value of R_a , R_b and C are set excessively large, the delay of the start-up may become too long.

• **Window Comparator Circuit
(Nch Open Drain Output)**

• **Over-charge Preventing Circuit**

TECHNICAL NOTES

When connecting resistors to the device's input pin

When connecting a resistor (R1) to an input of this device, the input voltage decreases by [Device's Consumption Current] x [Resistance Value] only. And, the cross conduction current*1, which occurs when changing from the detecting state to the release state, is decreased the input voltage by [Cross Conduction Current] x [Resistance Value] only. And then, this device will enter the re-detecting state if the input voltage reduction is larger than the difference between the detector voltage and the released voltage.

When the input resistance value is large and the VDD is gone up at mildly in the vicinity of the released voltage, repeating the above operation may result in the occurrence of output.

As shown in Figure A/B, set R1 to become 100kΩ or less as a guide, and connect C_{IN} of 0.1μF and more to between the input pin and GND. Besides, make evaluations including temperature properties under the actual usage condition, with using the evaluation board like this way. As result, make sure that the cross conduction current has no problem.

Figure A

Figure B

*1 In the CMOS output type, a charging current for OUT pin is included.

*2 Note the bias dependence of capacitors.

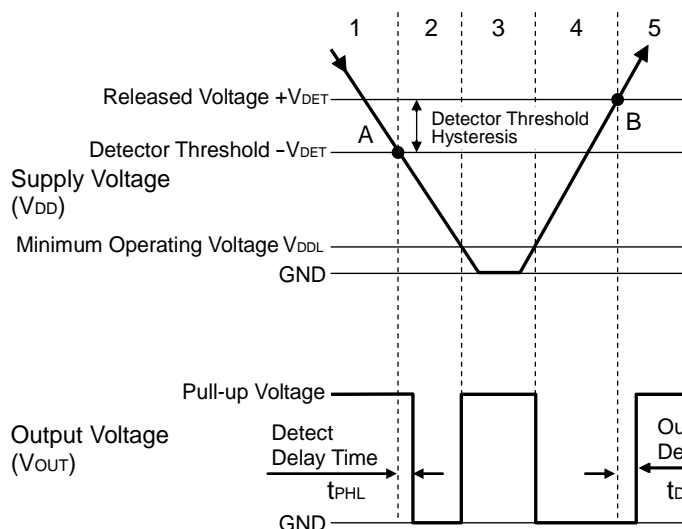

OPERATION

• Operation of R3116xxx1A

OUT pin should be pulled-up to V_{DD} or an external voltage level.

Block Diagram (R3116xxx1A)

Step	1	2	3	4	5
Comparator (-) Pin Input Voltage	I	II	II	II	I
Comparator Output	L	H	Indefinite	H	L
Tr.1	OFF	ON	Indefinite	ON	OFF
Output Tr. Nch	OFF	ON	Indefinite	ON	OFF

$$I \quad \frac{R_b + R_c}{R_a + R_b + R_c} \times V_{DD}$$

$$II \quad \frac{R_b}{R_a + R_b} \times V_{DD}$$

Operation Diagram

• Explanation of operation

Step 1. The output voltage is equal to the pull-up voltage.

Step 2. At Point "A", $V_{ref} \geq V_{DD} \times (R_b + R_c) / (R_a + R_b + R_c)$ is true, as a result, the output of comparator is reversed from "L" to "H", therefore the output voltage becomes the GND level. The voltage level of Point A means a detector threshold voltage ($-V_{DET}$).

Step 3. When the supply voltage is lower than the minimum operating voltage, the operation of the output transistor becomes indefinite. The output voltage is equal to the pull-up voltage.

Step 4. The output voltage is equal to the GND level.

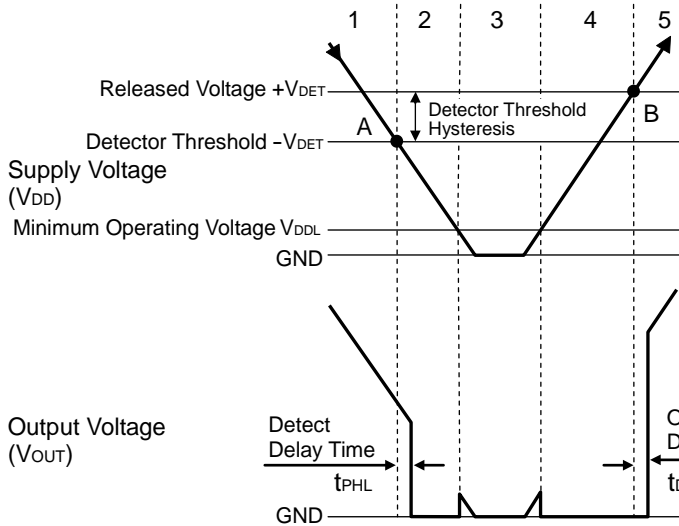

Step 5. At Point "B", $V_{ref} \leq V_{DD} \times R_b / (R_a + R_b)$ is true, as a result, the output of comparator is reversed from "H" to "L", then the output voltage is equal to the pull-up voltage. The voltage level of Point B means a released voltage ($+V_{DET}$).

*) The difference between a released voltage and a detector threshold voltage is a detector threshold hysteresis.

• Operation of R3116xxx1C

Block Diagram (R3116xxx1C)

Step	1	2	3	4	5	
Comparator (-) Pin Input Voltage	I	II	II	II	I	
Comparator Output	L	H	Indefinite	H	L	
Tr.1	OFF	ON	Indefinite	ON	OFF	
Output Tr.	Pch	ON	OFF	Indefinite	OFF	ON
	Nch	OFF	ON	Indefinite	ON	OFF

$$I \quad \frac{Rb+Rc}{Ra+Rb+Rc} \times V_{DD}$$

$$II \quad \frac{Rb}{Ra+Rb} \times V_{DD}$$

Operation Diagram

• Explanation of operation

Step 1. The output voltage is equal to the supply voltage (V_{DD}).

Step 2. At Point "A", $V_{ref} \geq V_{DD} \times (Rb+Rc) / (Ra+Rb+Rc)$ is true, as a result, the output of comparator is reversed from "L" to "H", therefore the output voltage becomes the GND level. The voltage level of Point A means a detector threshold voltage ($-V_{DET}$).

Step 3. When the supply voltage is lower than the minimum operating voltage, the operation of the output transistor becomes indefinite.

Step 4. The output voltage is equal to the GND level.

Step 5. At Point "B", $V_{ref} \leq V_{DD} \times Rb / (Ra+Rb)$ is true, as a result, the output of comparator is reversed from "H" to "L", then the output voltage is equal to the supply voltage (V_{DD}). The voltage level of Point B means a released voltage ($+V_{DET}$).

*) The difference between a released voltage and a detector threshold voltage is a detector threshold hysteresis.

DETECTOR OPERATION VS. GLITCH INPUT VOLTAGE TO THE V_{DD} PIN

When the R3116x is at released, if the pulse voltage which the detector threshold or lower voltage, the graph below means that the relation between pulse width and the amplitude of the swing to keep the released state for the R3116x.

*V_{OD}: Over Drive Voltage

V_{DD} Input Waveform

This graph shows the maximum pulse conditions to keep the released voltage. If the pulse with larger amplitude or wider width than the graph above is input to V_{DD} pin, the reset signal may be output.

PACKAGE INFORMATION

POWER DISSIPATION (DFN(PLP)1010-4)

Power Dissipation (P_D) depends on conditions of mounting on board. This specification is based on the measurement at the condition below:

Measurement Conditions

	Standard Test Land Pattern
Environment	Mounting on Board (Wind velocity=0m/s)
Board Material	Glass cloth epoxy plastic (Double sided)
Board Dimensions	40mm × 40mm × 1.6mm
Copper Ratio	Top side: Approx. 50%, Back side: Approx. 50%
Through-holes	φ 0.54mm × 24pcs

Measurement Result: (Ta=25°C, Tjmax=125°C)

	Standard Test Land Pattern
Power Dissipation	400mW
Thermal Resistance	$\theta_{ja} = (125-25^\circ\text{C})/0.4\text{W} = 250^\circ\text{C/W}$
	$\theta_{jc} = 67^\circ\text{C/W}$

Power Dissipation

Measurement Board Pattern

○ IC Mount Area (Unit : mm)

PACKAGE DIMENSIONS (DFN(PLP)1010-4)

*) The tab on the bottom of the package enhances thermal performance and is electrically connected to GND (substrate level). It is recommended that the tab be connected to the ground plane on the board, or otherwise be left floating.

POWER DISSIPATION (SOT-23-5)

Power Dissipation (P_D) depends on conditions of mounting on board. This specification is based on the measurement at the condition below:

(Power Dissipation (SOT-23-5) is substitution of SOT-23-6.)

* Measurement Conditions

	Standard Test Land Pattern
Environment	Mounting on Board (Wind velocity=0m/s)
Board Material	Glass cloth epoxy plastic (Double sided)
Board Dimensions	40mm*40mm*1.6mm
Copper Ratio	Top side: Approx. 50%, Back side: Approx. 50%
Through-holes	ϕ 0.5mm * 44pcs

* Measurement Result:

($T_a=25^\circ\text{C}$, $T_{j\text{max}}=125^\circ\text{C}$)

	Standard Land Pattern	Free Air
Power Dissipation	420mW	250mW
Thermal Resistance	$\theta_{ja} = (125-25^\circ\text{C})/0.42\text{W} = 238^\circ\text{C/W}$	400 $^\circ\text{C/W}$

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact Ricoh sales or our distributor before attempting to use AOI.
11. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

Ricoh is committed to reducing the environmental loading materials in electrical devices with a view to contributing to the protection of human health and the environment.

Ricoh has been providing RoHS compliant products since April 1, 2006 and Halogen-free products since April 1, 2012.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
