PERFORMANCE CHARACTERISTICS

- 1. **Operating Temperature:** - 55 °C to + 85 °C with rated DC voltage  $U_R$  applied. + 85 °C to + 125° C with linear voltage derating to category voltage  $U_C$  for 499D only (see general information)
- 2. **Capacitance and Tolerance:** Capacitance measured at 100 Hz and + 25 °C shall be within the specified tolerance limits of the nominal rating. Capacitance measurement shall be made by means of a polarized capacitance bridge. No polarizing voltage is required. The maximum voltage applied during measurements shall be 0.5  $V_{RMS}$  at 100 Hz and + 25 °C.
- 3. **Reverse Voltage:** These capacitors are capable of withstanding peak voltage in the reverse direction equal to:
  - 15 % of the rated DC voltage at + 20 °C
  - 10 % of the rated DC voltage at + 25 °C
  - 5 % of the rated DC voltage at + 85 °C

4. Surge Voltage:

DC rated voltage at + 85 °C (V)	3	6.3	10	16	20	25	35	50
DC surge voltage at + 85 °C (V)	4	8	13	20	26	32	46	65

DC surge voltage at + 125 °C (V) <sup>(1)</sup>	2.6	5.2	8.6	13	16	21	28	40

Note

<sup>(1)</sup>For 499D

Capacitors shall withstand the surge voltage applied in series with a 1000 Ω (± 5 %) resistor, at the rate of 1.5 min on, 5.5 min off for 1000 successive test cycles at + 85 °C. After test, capacitance change shall not exceed 10 % of initial value, dissipation factor and DC leakage current shall meet initial requirements at + 25 °C - Table 2.

- 8. **Marking:** The capacitors shall be marked with the rated capacitance and the rated DC working voltage. A code may be used for both capacitance and voltage. Units rated at 6.3 volts are usually marked as 6 volts. The package shall be marked with full Vishay Sprague part number, date code and quantity.

**GUIDE TO APPLICATION**

1. **AC Ripple Current:** The maximum allowable ripple current shall be determined from the formula:

$$I_{RMS} = \sqrt{\frac{P}{R_{ESR}}}$$

where,

P = Power dissipation in W at + 25 °C as given below

R<sub>ESR</sub> = The capacitor Equivalent Series Resistance at the specified frequency

2. **AC Ripple Voltage:** The maximum allowable ripple voltage shall be determined from the formula:

$$V_{RMS} = \sqrt{\frac{P}{R_{ESR}}} \times Z$$

where,

Z = The capacitor impedance at the specified frequency

3. **AC Ripple Current or Voltage Derating Factor:** If these capacitors are to be operated at temperatures above + 25 °C, the permissible RMS ripple current or voltage shall be calculated using the derating factors in the table below:

TEMPERATURE	DERATING FACTOR
+ 25 °C	1.0
+ 55 °C	0.9
+ 85 °C	0.8
+ 125 °C	0.4

4. **Power Dissipation:** Power dissipation will be affected by the heat sinking capability of the mounting surface. Non-sinusoidal ripple current may produce heating effects which differ from those shown in the following table. It is important that the equivalent I<sub>RMS</sub> value be established when calculating permissible operating levels.

CASE CODE	POWER DISSIPATION AT + 25 °C (W)
A	0.080
B	0.090
C	0.100
D	0.110
E	0.120
F	0.130
H	0.140
M	0.150
N	0.160
R	0.180

5. **Cleaning:** These capacitors are compatible with all commonly used solvents, such as TES, TMS, Prelete and Chloretane. Solvents containing methylene chloride or other epoxy solvents should be avoided since these will attack the epoxy encapsulation material.
