## HIGH PERFORMANCE CURRENT MODE PWM CONTROLLER

- TRIMMED OSCILLATOR FOR PRECISE FREQUENCY CONTROL
- OSCILLATOR FREQUENCY GUARANTEED AT 250kHz
- CURRENT MODE OPERATION TO 500kHz
- AUTOMATIC FEED FORWARD COMPENSATION
- LATCHING PWM FOR CYCLE-BY-CYCLE CURRENT LIMITING
- INTERNALLY TRIMMED REFERENCE WITH UNDERVOLTAGE LOCKOUT
- HIGH CURRENT TOTEM POLE OUTPUT
- UNDERVOLTAGE LOCKOUT WITH HYSTERESIS
- LOW START-UP AND OPERATING CURRENT

comparator which also provides current limit control, and a totem pole output stage designed to source or sink high peak current. The output stage, suitable for driving N-Channel MOSFETs, is low in the off-state.

### DESCRIPTION

The UC384xB family of control ICs provides the necessary features to implement off-line or DC to DC fixed frequency current mode control schemes with a minimal external parts count. Internally implemented circuits include a trimmed oscillator for precise DUTY CYCLE CONTROL under voltage lockout featuring start-up current less than 0.5mA, a precision reference trimmed for accuracy at the error amp input, logic to insure latched operation, a PWM

Differences between members of this family are the under-voltage lockout thresholds and maximum duty cycle ranges. The UC3842B and UC3844B have UVLO thresholds of 16V (on) and 10V (off), ideally suited off-line applications. The corresponding thresholds for the UC3843B and UC3845B are 8.5V and 7.9V. The UC3842B and UC3843B can operate to duty cycles approaching 100%. A range of the zero to < 50% is obtained by the UC3844B and UC3845B by the addition of an internal toggle flip flop which blanks the output off every other clock cycle.

### BLOCK DIAGRAM (toggle flip flop used only in UC3844B and UC3845B)

### ABSOLUTE MAXIMUM RATINGS

| Symbol    | Parameter  | Value         | Unit             |
|-----------|--|---------------|------------------|
| $V_i$     | Supply Voltage (low impedance source)                          | 30            | V                |
| $V_i$     | Supply Voltage ( $I_i < 30\text{mA}$ )                         | Self Limiting |                  |
| $I_o$     | Output Current   | $\pm 1$       | A                |
| $E_o$     | Output Energy (capacitive load)                                | 5             | $\mu\text{J}$    |
|           | Analog Inputs (pins 2, 3)                                      | - 0.3 to 5.5  | V                |
|           | Error Amplifier Output Sink Current                            | 10            | mA               |
| $P_{tot}$ | Power Dissipation at $T_{amb} \leq 25^\circ\text{C}$ (Minidip) | 1.25          | W                |
| $P_{tot}$ | Power Dissipation at $T_{amb} \leq 25^\circ\text{C}$ (SO8)     | 800           | mW               |
| $T_{stg}$ | Storage Temperature Range                                      | - 65 to 150   | $^\circ\text{C}$ |
| $T_J$     | Junction Operating Temperature                                 | - 40 to 150   | $^\circ\text{C}$ |
| $T_L$     | Lead Temperature (soldering 10s)                               | 300           | $^\circ\text{C}$ |

\* All voltages are with respect to pin 5, all currents are positive into the specified terminal.

### PIN CONNECTION (top view)

### PIN FUNCTIONS

| No | Function    | Description   |
|----|-------------|---|
| 1  | COMP        | This pin is the Error Amplifier output and is made available for loop compensation.   |
| 2  | $V_{FB}$    | This is the inverting input of the Error Amplifier. It is normally connected to the switching power supply output through a resistor divider.                                   |
| 3  | $I_{SENSE}$ | A voltage proportional to inductor current is connected to this input. The PWM uses this information to terminate the output switch conduction.                                 |
| 4  | $R_T/C_T$   | The oscillator frequency and maximum Output duty cycle are programmed by connecting resistor $R_T$ to $V_{ref}$ and capacitor $C_T$ to ground. Operation to 500kHz is possible. |
| 5  | GROUND      | This pin is the combined control circuitry and power ground.  |
| 6  | OUTPUT      | This output directly drives the gate of a power MOSFET. Peak currents up to 1A are sourced and sunk by this pin.  |
| 7  | $V_{CC}$    | This pin is the positive supply of the control IC.  |
| 8  | $V_{ref}$   | This is the reference output. It provides charging current for capacitor $C_T$ through resistor $R_T$ .   |

- Notes :**
1. Max package power dissipation limits must be respected; low duty cycle pulse techniques are used during test maintain T<sub>j</sub> as close to T<sub>amb</sub> as possible.
  2. These parameters, although guaranteed, are not 100% tested in production.
  3. Parameter measured at trip point of latch with V<sub>PIN2</sub> = 0.
  4. Gain defined as :  

$$A = \frac{\Delta V_{PIN1}}{\Delta V_{PIN3}} ; 0 \leq V_{PIN3} \leq 0.8 \text{ V}$$
  5. Adjust V<sub>i</sub> above the start threshold before setting at 15 V.

Figure 1: Open Loop Test Circuit.

High peak currents associated with capacitive loads necessitate careful grounding techniques. Timing and bypass capacitors should be connected close

to pin 5 in a single point ground. The transistor and 5 KΩ potentiometer are used to sample the oscillator waveform and apply an adjustable ramp to pin 3.

Figure 15 : Error Amp Configuration.

Figure 16 : Under Voltage Lockout.

Figure 17 : Current Sense Circuit .

Peak current ( $i_s$ ) is determined by the formula

$$I_{s \max} \approx \frac{1.0 \text{ V}}{R_s}$$

A small RC filter may be required to suppress switch transients.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
