48-pin Data Sheet – megaAVR® 0-series

Introduction

The ATmega809/1609/3209/4809 microcontrollers of the megaAVR® 0-series are using the AVR® processor with hardware multiplier, running at up to 20 MHz, with a wide range of Flash sizes up to 48 KB, up to 6 KB of SRAM, and 256 bytes of EEPROM in 28-, 32-, 40-, or 48-pin package. The series uses the latest technologies from Microchip with a flexible and low-power architecture including Event System and SleepWalking, accurate analog features and advanced peripherals.

The devices described here offer Flash sizes from 8 KB to 48 KB in a 48-pin package.

Features

- AVR® CPU
 - Single-cycle I/O access
 - Two-level interrupt controller
 - Two-cycle hardware multiplier
- Memories
 - Up to 48 KB In-system self-programmable Flash memory
 - 256B EEPROM
 - Up to 6 KB SRAM
 - Write/Erase endurance:
 - Flash 10,000 cycles
 - EEPROM 100,000 cycles
 - Data retention: 40 Years at 55°C
- System
 - Power-on Reset (POR) circuit
 - Brown-out Detector (BOD)
 - Clock options:
 - 16/20 MHz low-power internal oscillator
 - 32.768 kHz Ultra Low-Power (ULP) internal oscillator
 - 32.768 kHz external crystal oscillator
 - External clock input
 - Single pin Unified Program Debug Interface (UPDI)
 - Three sleep modes:
 - Idle with all peripherals running for immediate wake-up
 - Standby
 - Configurable operation of selected peripherals

- SleepWalking peripherals
 - Power-Down with limited wake-up functionality
- Peripherals
 - One 16-bit Timer/Counter type A (TCA) with a dedicated period register and three compare channels
 - Four 16-bit Timer/Counter type B with input capture (TCB)
 - One 16-bit Real-Time Counter (RTC) running from an external crystal or an internal RC oscillator
 - Four USART with fractional baud rate generator, auto-baud, and start-of-frame detection
 - Master/slave Serial Peripheral Interface (SPI)
 - Dual mode Master/Slave TWI with dual address match
 - Standard mode (Sm, 100 kHz)
 - Fast mode (Fm, 400 kHz)
 - Fast mode plus (Fm+, 1 MHz)
 - Event System for CPU independent and predictable inter-peripheral signaling
 - Configurable Custom Logic (CCL) with up to four programmable Look-up Tables (LUT)
 - One Analog Comparator (AC) with a scalable reference input
 - One 10-bit 150 ksps Analog to Digital Converter (ADC)
 - Five selectable internal voltage references: 0.55V, 1.1V, 1.5V, 2.5V, and 4.3V
 - CRC code memory scan hardware
 - Optional automatic scan before code execution is allowed
 - Watchdog Timer (WDT) with Window mode, with separate on-chip oscillator
 - External interrupt on all general purpose pins
- I/O and Packages:
 - 41 programmable I/O lines
 - 48-pin UQFN 6x6 and TQFP 7x7
- Temperature Range: -40°C to 125°C
- Speed Grades -40°C to 105°C:
 - 0-5 MHz @ 1.8V – 5.5V
 - 0-10 MHz @ 2.7V – 5.5V
 - 0-20 MHz @ 4.5V – 5.5V
- Speed Grades -40°C to 125°C:
 - 0-8 MHz @ 2.7V - 5.5V
 - 0-16 MHz @ 4.5V - 5.5V

Note:

1. Pin names are of type Pxn, with x being the PORT instance (A,B,C, ...) and n the pin number. Notation for signals is PORTx_PINn. All pins can be used as event input.
2. All pins can be used for external interrupt, where pins Px2 and Px6 of each port have full asynchronous detection.
3. Alternate pin positions. For selecting the alternate positions, refer to the PORTMUX documentation.

4. Electrical Characteristics

4.1 Disclaimer

All typical values are measured at $T = 25^{\circ}\text{C}$ and $V_{\text{DD}} = 3\text{V}$ unless otherwise specified. All minimum and maximum values are valid across operating temperature and voltage unless otherwise specified.

Typical values given should be considered for design guidance only, and actual part variation around these values is expected.

4.2 Absolute Maximum Ratings

Stresses beyond those listed in this section may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Table 4-1. Absolute Maximum Ratings

| Symbol | Description | Conditions | Min. | Max. | Unit |
|-----------------------|--|---|------|---------------------|--------------------|
| V_{DD} | Power Supply Voltage | | -0.5 | 6 | V |
| I_{VDD} | Current into a V_{DD} pin | $T_{\text{A}}=[-40, 85]^{\circ}\text{C}$ | - | 200 | mA |
| | | $T_{\text{A}}=[85, 125]^{\circ}\text{C}$ | - | 100 | mA |
| I_{GND} | Current out of a GND pin | $T_{\text{A}}=[-40, 85]^{\circ}\text{C}$ | - | 200 | mA |
| | | $T_{\text{A}}=[85, 125]^{\circ}\text{C}$ | - | 100 | mA |
| V_{PIN} | Pin voltage with respect to GND | | -0.5 | $V_{\text{DD}}+0.5$ | V |
| I_{PIN} | I/O pin sink/source current | | -40 | 40 | mA |
| $I_{\text{c1}}^{(1)}$ | I/O pin injection current except for the RESET pin | $V_{\text{pin}} < \text{GND}-0.6\text{V}$ or $5.5\text{V} < V_{\text{pin}} \leq 6.1\text{V}$ $4.9\text{V} < V_{\text{DD}} \leq 5.5\text{V}$ | -1 | 1 | mA |
| $I_{\text{c2}}^{(1)}$ | I/O pin injection current except for the RESET pin | $V_{\text{pin}} < \text{GND}-0.6\text{V}$ or $V_{\text{pin}} \leq 5.5\text{V}$ $V_{\text{DD}} \leq 4.9\text{V}$ | -15 | 15 | mA |
| T_{storage} | Storage temperature | | -65 | 150 | $^{\circ}\text{C}$ |

Note:

- If V_{PIN} is lower than $\text{GND}-0.6\text{V}$, then a current limiting resistor is required. The negative DC injection current limiting resistor is calculated as $R = (\text{GND}-0.6\text{V} - V_{\text{pin}})/I_{\text{CN}}$.
 - If V_{PIN} is greater than $V_{\text{DD}}+0.6\text{V}$, then a current limiting resistor is required. The positive DC injection current limiting resistor is calculated as $R = (V_{\text{pin}}-(V_{\text{DD}}+0.6))/I_{\text{CN}}$.

4.3 General Operating Ratings

The device must operate within the ratings listed in this section in order for all other electrical characteristics and typical characteristics of the device to be valid.

ATmega809/1609/3209/4809 – 48-pin

Electrical Characteristics

Table 4-2. General Operating Conditions

| Symbol | Description | Condition | Min. | Max. | Unit |
|-----------------|-----------------------------|-----------|--------------------|------|------|
| V _{DD} | Operating Supply Voltage | | 1.8 ⁽¹⁾ | 5.5 | V |
| T _A | Operating temperature range | | -40 | 125 | °C |

Note:

1. Operation is guaranteed down to 1.8V or VBOD with BODLEVEL0, whichever is lower.

Table 4-3. Operating Voltage and Frequency

| Symbol | Description | Condition | Min. | Max. | Unit |
|----------------------|--|--|------|------|------|
| f _{CLK_CPU} | Nominal operating system clock frequency | V _{DD} =[1.8, 5.5]V T _A =[-40, 105]°C ⁽¹⁾⁽⁴⁾ | 0 | 5 | MHz |
| | | V _{DD} =[2.7, 5.5]V T _A =[-40, 105]°C ⁽²⁾⁽⁴⁾ | 0 | 10 | |
| | | V _{DD} =[4.5, 5.5]V T _A =[-40, 105]°C ⁽³⁾⁽⁴⁾ | 0 | 20 | |
| | | V _{DD} =[2.7, 5.5]V T _A =[-40, 125]°C ⁽²⁾ | 0 | 8 | |
| | | V _{DD} =[4.5, 5.5]V T _A =[-40, 125]°C ⁽²⁾ | 0 | 16 | |

Note:

1. Operation is guaranteed down to BOD triggering level, V_{BOD} with BODLEVEL0.
2. Operation is guaranteed down to BOD triggering level, V_{BOD} with BODLEVEL2.
3. Operation is guaranteed down to BOD triggering level, V_{BOD} with BODLEVEL7.
4. These specifications do not apply to automotive range parts (-VAO).

The maximum CPU clock frequency depends on V_{DD}. As shown in the figure below, the Maximum Frequency vs. V_{DD} is linear between 1.8V < V_{DD} < 2.7V and 2.7V < V_{DD} < 4.5V.

Figure 4-1. Maximum Frequency vs. V_{DD} for $[-40, 105]^{\circ}\text{C}$

4.4 Power Considerations

The average die junction temperature, T_J (in $^{\circ}\text{C}$) is given from the formula

$$T_J = T_A + P_D * R_{\theta JA}$$

where P_D is the total power dissipation.

The total thermal resistance of a package ($R_{\theta JA}$) can be separated into two components, $R_{\theta JC}$ and $R_{\theta CA}$, representing the barrier to heat flow from the semiconductor junction to the package (case) surface ($R_{\theta JC}$) and from the case to the outside ambient air ($R_{\theta CA}$). These terms are related by the equation:

$$R_{\theta JA} = R_{\theta JC} + R_{\theta CA}$$

$R_{\theta JC}$ is device related and cannot be influenced by the user. However, $R_{\theta CA}$ is user dependent and can be minimized by thermal management techniques such as heat sinks, ambient air cooling, and thermal convection. Thus, good thermal management on the part of the user can significantly reduce $R_{\theta CA}$ so that $R_{\theta JA}$ approximately equals $R_{\theta JC}$.

The power dissipation curve is negatively sloped as ambient temperature increase. The maximum power dissipation is therefore at minimum ambient temperature while the highest junction temperature occurs at the maximum ambient temperature.

Table 4-4. Power Dissipation and Junction Temperature vs Temperature

| Package | T_A Range | $R_{\theta JA}$ ($^{\circ}\text{C}/\text{W}$) | P_D (W) Typical | $T_J - T_A$ ($^{\circ}\text{C}$) Typical |
|---------|--|---|-------------------|--|
| UQFN48 | -40°C to 125°C | | 1.0 | |
| TQFP48 | -40°C to 125°C | | 1.0 | |

4.5 Power Consumption

The values are measured power consumption under the following conditions, except where noted:

- $V_{DD}=3\text{V}$
- $T_A=25^{\circ}\text{C}$
- OSC20M used as system clock source, except where otherwise specified

- System power consumption measured with peripherals disabled and I/O ports driven low with inputs disabled

Note:

1. These parameters are for design guidance only and are not tested.

4.6 Peripherals Power Consumption

The table below can be used to calculate the additional current consumption for the different I/O peripherals in the various operating modes.

Some peripherals will request the clock to be enabled when operating in STANDBY. See the peripheral chapter for further information.

Operating conditions:

- V_{DD}=3V
- T=25°C
- OSC20M at 1 MHz used as system clock source, except where otherwise specified
- In Idle Sleep mode, except where otherwise specified

Table 4-7. Peripherals Power Consumption

| Peripheral | Conditions | Typ. ⁽¹⁾ | Unit |
|---------------------------|-------------------------------|---------------------|------|
| BOD | Continuous | 19 | μA |
| | Sampling @ 1 kHz | 1.2 | |
| TCA | 16-bit count @ 1 MHz | 13.0 | μA |

Note:

1. Current consumption of the module only. To calculate the total internal power consumption of the microcontroller, add this value to the base power consumption given in “Power Consumption” section in electrical characteristics.
2. CPU in Standby mode.
3. Average power consumption with ADC active in Free-Running mode.

Note:

1. A DNL error of less than or equal to 1 LSB ensures a monotonic transfer function with no missing codes.
2. These parameters are for design guidance only and are not production tested.
3. Reference setting and f_{ADC} must fulfill the specification in “Clock and Timing Characteristics” and “Power supply, Reference, and Input Range” tables.

4.15.2 External Reference Characteristics

Operating conditions:

- V_{DD} = 1.8 to 5.5V
- Temperature = -40°C to 125°C
- DUTYCYC = 25%
- CLK_{ADC} = 13 * f_{ADC}
- SAMPCAP is 5 pF

The accuracy characteristics numbers are based on the characterization of the following input reference levels and V_{DD} ranges:

- V_{ref} = 1.8V, V_{DD} = 1.8 to 5.5V
- V_{ref} = 2.6V, V_{DD} = 2.7 to 5.5V
- V_{ref} = 4.096V, V_{DD} = 4.5 to 5.5V

To order or obtain information, for example on pricing or delivery, refer to the factory or the listed sales office.

Note: Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes. Check with your Microchip Sales Office for package availability with the Tape and Reel option.

7. Online Package Drawings

For the most recent package drawings:

1. Go to <http://www.microchip.com/packaging>.
2. Go to the package type specific page, for example VQFN.
3. Search for either Drawing Number or Style to find the most recent package drawings.

The Microchip Web Site

Microchip provides online support via our web site at <http://www.microchip.com/>. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

Customer Change Notification Service

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at <http://www.microchip.com/>. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

Customer Support

Users of Microchip products can receive assistance through several channels:

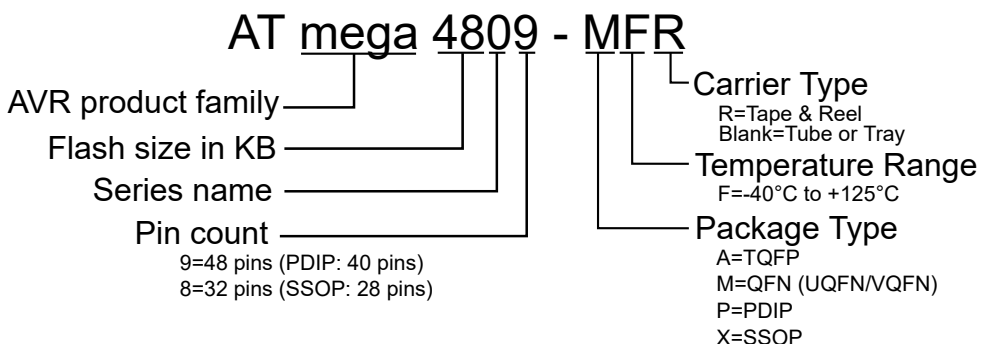

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or Field Application Engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: <http://www.microchip.com/support>

Product Identification System

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

Note: Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes. Check with your Microchip Sales Office for package availability with the Tape and Reel option.

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Quality Management System Certified by DNV

ISO/TS 16949

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC[®] MCUs and dsPIC[®] DSCs, KEELOQ[®] code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «**JONHON**», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «**FORSTAR**».

JONHON

«**JONHON**» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«**FORSTAR**» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
