TC51

1μA Voltage Detector with Output Delay

Features

- Precise Detection Thresholds: ±2.0%
- Small Package: 3-Pin SOT-23A
- Low Supply Current: Typ. 1μA
- Wide Detection Range: 1.6V to 6.0V
- Wide Operating Voltage Range: 0.7V to 10V
- Built-in Delay Circuit: 50msec to 200 msec
- Open-Drain Output

Applications

- Battery Voltage Monitoring
- Microprocessor Reset
- System Brown-out Protection

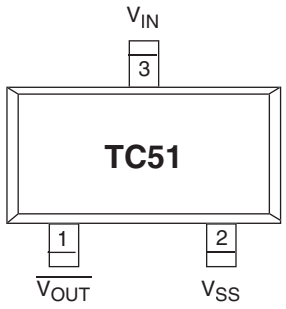
Device Selection Table

Part Number	Package	Temp. Range
TC51-xxxxxxxxxx	3-Pin SOT-23A	-40°C to +85°C

Other output voltages are available. Please contact Microchip Technology Inc. for details.

Package Type

3-Pin SOT-23A



NOTE: 3-Pin SOT-23A is equivalent to the EIAJ SC-59.

General Description

The TC51 is a very low power, open drain output, CMOS voltage detector with built-in delay. It is particularly well-suited for battery powered applications because of its extremely low 1μA operating current and small surface-mount packaging. Each part is laser-trimmed to the desired threshold voltage, which can be specified from 1.6V to 6.0V. The standard built-in output delay is 50msec-200msec.

The device includes a comparator, low-current high-precision reference, laser-programmed voltage divider, hysteresis circuit and output driver with digital delay timer.

In operation, the TC51's output ($\overline{V_{OUT}}$) remains in the logic HIGH state as long as V_{IN} is greater than the specified threshold voltage (V_{DET}-). When V_{IN} falls below V_{DET}-, the output is immediately driven to a logic LOW. $\overline{V_{OUT}}$ remains LOW until V_{IN} rises above V_{DET}- by an amount V_{HYST}, whereupon it returns to a logic HIGH after expiration of the built-in delay time.

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings*

Input Voltage .....+12V
Output Current 50mA
Output Voltage: Open Drain .....(V_{SS} – 0.3V) to 12V
Power Dissipation ($T_A \leq 70°C$):
3-Pin SOT-23A 240mW
Operating Temperature Range.....-40°C to +85°C
Storage Temperature Range .....-65°C to +150°C

*Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operation sections of the specifications is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

TC51 ELECTRICAL SPECIFICATIONS

Electrical Characteristics: T_A = 25°C, unless otherwise specified.						
Symbol	**Parameter**	**Min**	**Typ**	**Max**	**Units**	**Test Conditions**
V_{IN}	Operating Voltage	0.7	—	10.0	V	(V_{DET}-) = 1.6 to 6.0V

2.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in Table 2-1.

TABLE 2-1: PIN FUNCTION TABLE

Pin No. (3-Pin SOT-23A)	Symbol	Description
1	$\overline{V_{OUT}}$	Digital output. This output goes low when V_{IN} drops below V_{DET}- and returns high when V_{IN} rises above V_{DET}- + V_{HYST}. (See Figure 3-1, Timing Diagram).
2	V_{SS}	Ground terminal.
3	V_{IN}	Analog input. This pin is both the power supply input and the voltage to be monitored.

3.0 DETAILED DESCRIPTION

In normal steady-state operation, when $V_{IN} > V_{DET}-$, the output is high, see Figure 3-1. If and when the input falls below $V_{DET}-$, the output pulls down (Logic 0) to V_{SS}. Generally, V_{OUT} can pull down to within 0.5V of V_{SS} at rated output current and input voltage. (Also see Section 1.0, Electrical Characteristics).

The output, $\overline{V_{OUT}}$, stays valid until the input voltage falls below the minimum operating voltage, V_{INMIN}, of 0.7V. Below this minimum operating voltage, the output is undefined. During power-up or anytime V_{IN} has fallen below V_{INMIN}, $\overline{V_{OUT}}$ will remain undefined until V_{IN} rises above V_{INMIN}, at which time the output becomes valid. $\overline{V_{OUT}}$ is maintained in its active low state while $V_{INMIN} < V_{IN} < V_{DET}+$. ($V_{DET}+ = V_{DET}- + V_{HYST}$). If and when the input rises above $V_{DET}+$, the output will assume its inactive state after Delay Time (T_{DLY}).

FIGURE 3-1: TIMING DIAGRAM

4.0 APPLICATIONS INFORMATION

4.1 Processor $\overline{\text{RESET}}$ Supervisor

Figure 4-1 shows the TC51 used as a processor reset supervisor. Because the TC51 is available in threshold settings of 1.6V to 6.0V, the user can choose the reset single threshold setting best suited to the system power supply voltage at hand. Also, the 1μA supply current is significantly lower than its nearest competitor.

As shown in the timing diagram (Figure 3-1), $\overline{V_{OUT}}$ is low for voltages between 0.7V and V_{DET}+. The TC51 activates its on-board delay timer once the power supply voltage is within tolerance (i.e., greater than V_{DET}+). $\overline{V_{OUT}}$ is released after delay time (T_{DLY}).

Should the power supply voltage momentarily dip ("brown-out" condition), the TC51 immediately drives and holds the processor $\overline{\text{RESET}}$ input low. $\overline{\text{RESET}}$ is released after the power supply voltage is again within tolerance, and after the delay timer expires. $\overline{\text{RESET}}$ is driven and held low when power fails (power-off or "blackout"), and is maintained down low to a supply voltage of 0.7V.

FIGURE 4-1: PROCESSOR $\overline{\text{RESET}}$ SUPERVISOR

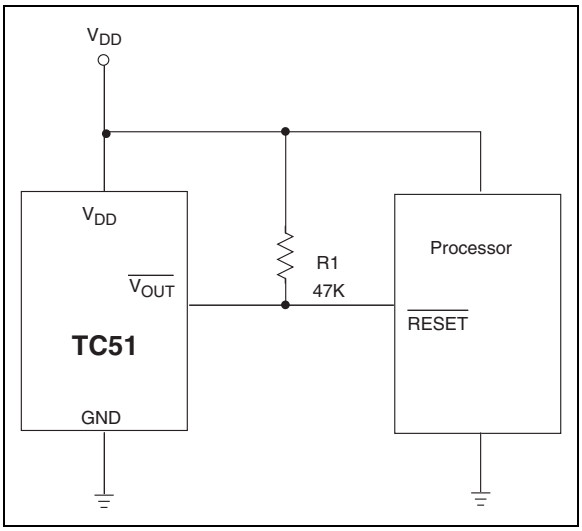

FIGURE 4-2: TC51 OPERATION DURING POWER-UP, BROWN-OUT AND POWER DOWN

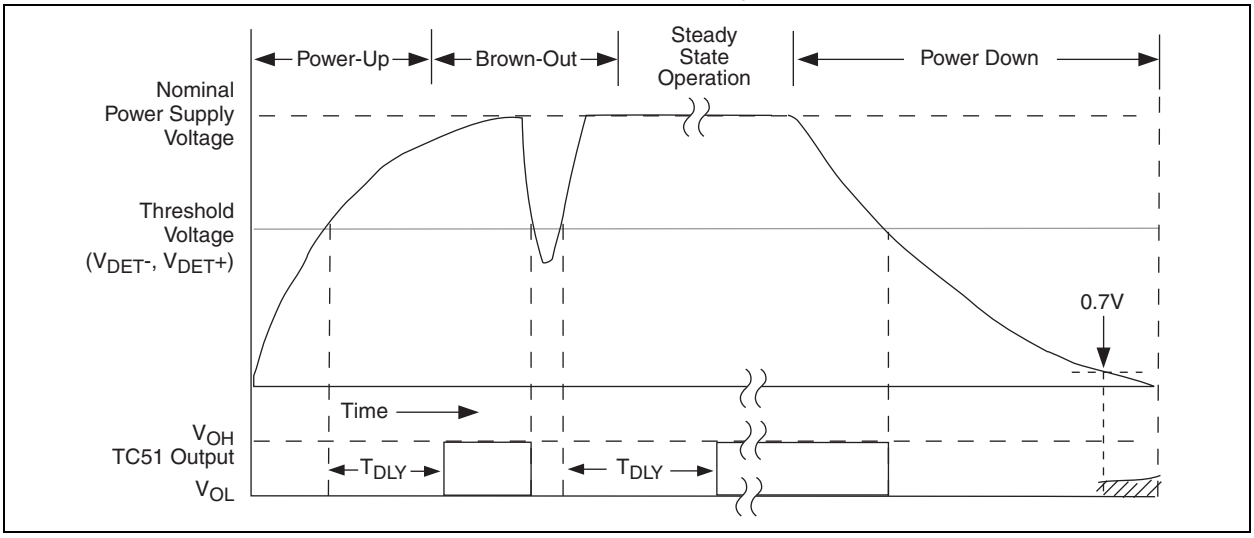

5.0 TYPICAL CHARACTERISTICS

Note: The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

PART CODE	TC51	N	18	0	2	E	CB	XX

Output Configuration:
N = Open Drain

Detected Voltage:
Ex: 18 = 1.8V

Output Delay:
0 = 50msec-200msec (standard)

Tolerance:
2 = ±2%

Temperature:
E: -40°C to +85°C

Package Type and Pin Count:
CB: 3-Pin SOT-23A (equivalent to EIAJ SC-59)

Taping Direction:
TR: Standard Taping

Sales and Support

Data Sheets
Products supported by a preliminary Data Sheet may have an errata sheet describing minor operational differences and recommended workarounds. To determine if an errata sheet exists for a particular device, please contact one of the following:

1. Your local Microchip sales office
2. The Microchip Worldwide Site (www.microchip.com)

Please specify which device, revision of silicon and Data Sheet (include Literature #) you are using.

New Customer Notification System

NOTES:

© 2002-2012 Microchip Technology Inc.

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
ISO/TS 16949

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.

OCEAN CHIPS
Океан Электроники
Поставка электронных компонентов

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «**JONHON**», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «**FORSTAR**».

AVIC JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
