**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

---

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

**Trademarks**

The Microchip name and logo, the Microchip logo, dsPIC, FlashFlex, flexPWR, JukeBlox, KEELOQ, KEELOQ logo, Kleer, LANCheck, MediaLB, MOST, MOST logo, MPLAB, OptoLyzer, PIC, PICSTART, PIC<sup>32</sup> logo, RightTouch, SpyNIC, SST, SST Logo, SuperFlash and UNI/O are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

**QUALITY MANAGEMENT SYSTEM**  
**CERTIFIED BY DNV**  
**== ISO/TS 16949 ==**

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*

**Object of Declaration:** EVB-LAN9252-DIGIO

EU Declaration of Conformity

**Manufacturer:** Microchip Technology Inc.  
2355 W. Chandler Blvd.  
Chandler, Arizona, 85224-6199  
USA

This declaration of conformity is issued by the manufacturer.

The development/evaluation tool is designed to be used for research and development in a laboratory environment. This development/evaluation tool is not a Finished Appliance, nor is it intended for incorporation into Finished Appliances that are made commercially available as single functional units to end users under EU EMC Directive 2004/108/EC and as supported by the European Commission's Guide for the EMC Directive 2004/108/EC (8<sup>th</sup> February 2010).

This development/evaluation tool complies with EU RoHS2 Directive 2011/65/EU.

This development/evaluation tool, when incorporating wireless and radio-telecom functionality, is in compliance with the essential requirement and other relevant provisions of the R&TTE Directive 1999/5/EC and the FCC rules as stated in the declaration of conformity provided in the module datasheet and the module product page available at [www.microchip.com](http://www.microchip.com).

For information regarding the exclusive, limited warranties applicable to Microchip products, please see Microchip's standard terms and conditions of sale, which are printed on our sales documentation and available at [www.microchip.com](http://www.microchip.com).

Signed for and on behalf of Microchip Technology Inc. at Chandler, Arizona, USA

### NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our web site ([www.microchip.com](http://www.microchip.com)) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXA”, where “XXXX” is the document number and “A” is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB® IDE online help. Select the Help menu, and then Topics to open a list of available online help files.

## INTRODUCTION

This chapter contains general information that will be useful to know before using the EVB-LAN9252-DIGIO. Items discussed in this chapter include:

- [Document Layout](#)
- [Conventions Used in this Guide](#)
- [The Microchip Web Site](#)
- [Development Systems Customer Change Notification Service](#)
- [Customer Support](#)
- [Document Revision History](#)

## DOCUMENT LAYOUT

This document describes how to use the EVB-LAN9252-DIGIO as a development tool for the Microchip LAN9252 EtherCAT® slave controller. The manual layout is as follows:

- **Chapter 1. “Overview”** – Shows a brief description of the EVB-LAN9252-DIGIO.
- **Chapter 2. “Board Details & Configuration”** – Includes details and instructions for using the EVB-LAN9252-DIGIO.
- **Chapter 3. “LAN9252 EEPROM Programming”** – Includes details and instructions for programming the LAN9252 EEPROM.
- **Appendix A. “EVB-LAN9252-DIGIO Evaluation Board”** – This appendix shows the EVB-LAN9252-DIGIO.
- **Appendix B. “EVB-LAN9252-DIGIO Evaluation Board Schematics”** – This appendix shows the EVB-LAN9252-DIGIO schematics.
- **Appendix C. “Bill of Materials (BOM)”** – This appendix includes the EVB-LAN9252-DIGIO Bill of Materials (BOM).

## CONVENTIONS USED IN THIS GUIDE

This manual uses the following documentation conventions:

### DOCUMENTATION CONVENTIONS

Description	Represents	Examples
<b>Arial font:</b>		
Italic characters	Referenced books	<i>MPLAB<sup>®</sup> IDE User's Guide</i>
	Emphasized text	...is the <i>only</i> compiler...
Initial caps	A window	the Output window
	A dialog	the Settings dialog
	A menu selection	select Enable Programmer
Quotes	A field name in a window or dialog	"Save project before build"
Underlined, italic text with right angle bracket	A menu path	<u><i>File&gt;Save</i></u>
Bold characters	A dialog button	Click <b>OK</b>
	A tab	Click the <b>Power</b> tab
N'Rnnnn	A number in verilog format, where N is the total number of digits, R is the radix and n is a digit.	4'b0010, 2'hF1
Text in angle brackets < >	A key on the keyboard	Press <Enter>, <F1>
<b>Courier New font:</b>		
Plain Courier New	Sample source code	#define START
	Filenames	autoexec.bat
	File paths	c:\mcc18\h
	Keywords	_asm, _endasm, static
	Command-line options	-Opa+, -Opa-
	Bit values	0, 1
	Constants	0xFF, 'A'
Italic Courier New	A variable argument	<i>file.o</i> , where <i>file</i> can be any valid filename
Square brackets [ ]	Optional arguments	mcc18 [options] <i>file</i> [options]
Curly brackets and pipe character: {   }	Choice of mutually exclusive arguments; an OR selection	errorlevel {0 1}
Ellipses...	Replaces repeated text	var_name [, var_name...]
	Represents code supplied by user	void main (void) { ... }

## THE MICROCHIP WEB SITE

Microchip provides online support via our web site at [www.microchip.com](http://www.microchip.com). This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

## DEVELOPMENT SYSTEMS CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at [www.microchip.com](http://www.microchip.com), click on Customer Change Notification and follow the registration instructions.

The Development Systems product group categories are:

- **Compilers** – The latest information on Microchip C compilers, assemblers, linkers and other language tools. These include all MPLAB C compilers; all MPLAB assemblers (including MPASM assembler); all MPLAB linkers (including MPLINK object linker); and all MPLAB librarians (including MPLIB object librarian).
- **Emulators** – The latest information on Microchip in-circuit emulators. This includes the MPLAB REAL ICE and MPLAB ICE 2000 in-circuit emulators.
- **In-Circuit Debuggers** – The latest information on the Microchip in-circuit debuggers. This includes MPLAB ICD 3 in-circuit debuggers and PICkit 3 debug express.
- **MPLAB IDE** – The latest information on Microchip MPLAB IDE, the Windows Integrated Development Environment for development systems tools. This list is focused on the MPLAB IDE, MPLAB IDE Project Manager, MPLAB Editor and MPLAB SIM simulator, as well as general editing and debugging features.
- **Programmers** – The latest information on Microchip programmers. These include production programmers such as MPLAB REAL ICE in-circuit emulator, MPLAB ICD 3 in-circuit debugger and MPLAB PM3 device programmers. Also included are nonproduction development programmers such as PICSTART Plus and PIC-kit 2 and 3.

## CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: <http://www.microchip.com/support>

## DOCUMENT REVISION HISTORY

Revision	Section/Figure/Entry	Correction
DS50002332B (05-12-15)	All	Updated board name to “EVB-LAN9252-DIGIO” throughout document, corrected misc. typos and grammatical errors.
	<b>Section 1.2 “References”</b>	Updated list of application notes
DS50002332A	Initial Release of document	

---

---

## Chapter 1. Overview

---

---

### 1.1 INTRODUCTION

The LAN9252 is a 2-port EtherCAT® slave controller with dual integrated Ethernet PHYs which each contain a full-duplex 100BASE-TX transceiver and support 100Mbps (100BASE-TX) operation. 100BASE-FX is supported via an external fiber transceiver.

Each port receives an EtherCAT® frame, performs frame checking and forwards it to the next port. Time stamps of received frames are generated when they are received. The Loop-back function of each port forwards the frames to the next logical port if there is either no link at a port, if the port is not available, or if the loop is closed for that port. The Loop-back function of port 0 forwards the frames to the EtherCAT® Processing Unit. The loop settings can be controlled by the EtherCAT® master.

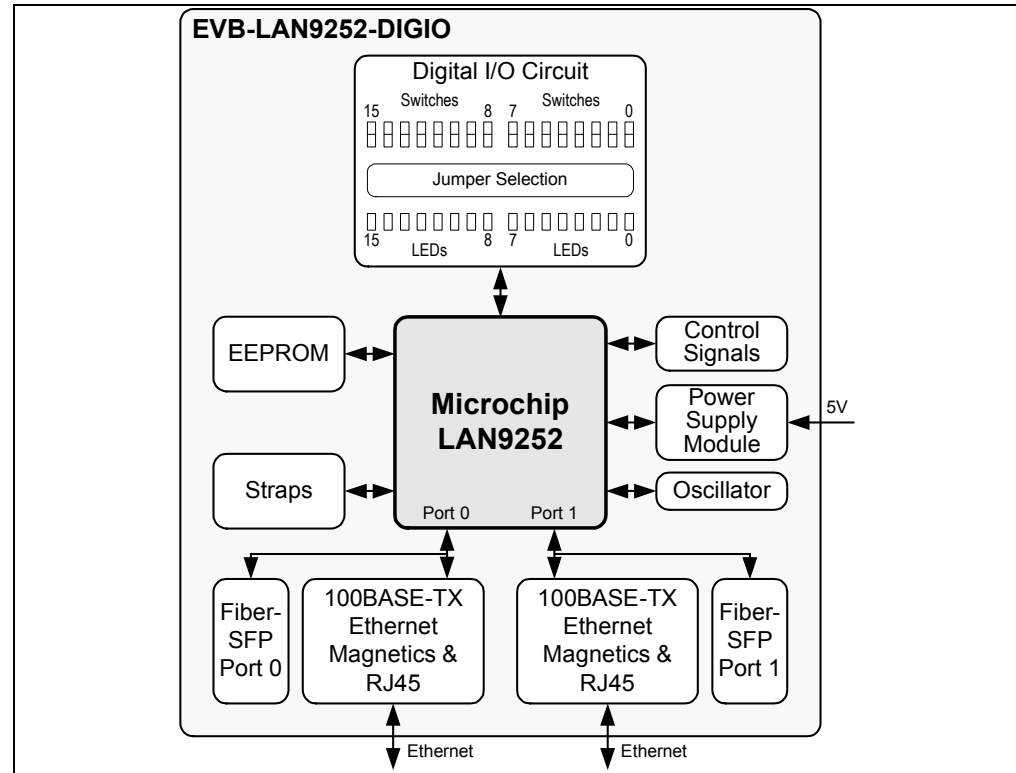

Packets are forwarded in the following order:

Port 0 -> EtherCAT® Processing Unit -> Port 1 -> Port 2.

The EtherCAT® Processing Unit (EPU) receives, analyzes and processes the EtherCAT® data stream. The main purpose of the EtherCAT® Processing unit is to enable and coordinate access to the internal registers and the memory space of the ESC, which can be addressed both from the EtherCAT® master and from the local application. Data exchange between master and slave applications is comparable to a dual-ported memory (process memory), enhanced by special functions for consistency checking (SyncManager) and data mapping (FMMU). Each FMMU performs bitwise mapping of logical EtherCAT® system addresses to physical device addresses.

The scope of this document is to describe the EVB-LAN9252-DIGIO setup, which supports a Digital I/O PDI Interface and corresponding jumper configurations. The LAN9252 is connected to an RJ45 Ethernet jack with integrated magnetics for 100BASE-TX connectivity. A simplified block diagram of the EVB-LAN9252-DIGIO is shown in [Figure 1-1](#).

**FIGURE 1-1: EVB-LAN9252-DIGIO BLOCK DIAGRAM**

## 1.2 REFERENCES

Concepts and material available in the following documents may be helpful when reading this document. Visit [www.microchip.com](http://www.microchip.com) for the latest documentation.

- LAN9252 Data Sheet
- AN 8.13 Suggested Magnetics
- EVB-LAN9252-DIGIO Schematics
- AN1920 Microchip LAN9252 EEPROM Configuration and Programming
- AN1907 Microchip LAN9252 Migration from Beckhoff ET1100

## 1.3 TERMS AND ABBREVIATIONS

IDE - Integrated Development Environment  
 ESC - EtherCAT® Slave Controller  
 EVB - Engineering Validation Board  
 HAL - Hardware Abstraction Layer  
 HBI - Host Bus Interface  
 SPI - Serial Protocol Interface  
 SSC - Slave Stack Code

---

---

## Chapter 2. Board Details & Configuration

---

---

This section includes sub-sections on the following EVB-LAN9252-DIGIO details:

- Power
- Resets
- Clock
- Configuration
- Mechanicals

### 2.1 POWER

#### 2.1.1 +5V Power

Power is supplied to the LAN9252 by a +3.3V on-board regulator, which is powered by a +5V external wall adapter (Manufacturer: TRIAD MAGNETICS and P/N: WSU050-3000). The LAN9252 includes an internal +1.2V regulator which supplies power to the internal core logic. Assertion of the D1 Green LED indicates successful generation of +3.3V output. The SW1 switch must be in the ON position for the +5V to power the +3.3V regulator.

### 2.2 RESETS

#### 2.2.1 Power-on Reset

A power-on reset occurs whenever power is initially applied to the LAN9252 or if the power is removed and reapplied to the LAN9252. This event resets all circuitry within the LAN9252. After initial power-on, the LAN9252 can be reset by pressing the reset switch SW2. The reset LED D2 will assert (Red) if when the LAN9252 is in reset condition. For stability, a delay of approximately 180ms is added from the +3.3V output to reset release.

### 2.3 CLOCK

The EVB-LAN9252-DIGIO utilizes an external 25Mhz 25ppm crystal from Cardinal Components Inc. (P/N: CSM1Z-A5B2C5-40-25.0D18-F).

# Board Details & Configuration

## 2.4 CONFIGURATION

The following sub-sections describe the various board features and configuration settings. A top view of the EVB-LAN9252-DIGIO is shown in Figure 2-1.

FIGURE 2-1: EVB-LAN9252-DIGIO TOP VIEW WITH CALLOUTS

## 2.4.1 Strap Options

### 2.4.1.1 CHIP MODE SELECTION

Table 2-1 details the LAN9252 chip mode configuration straps.

**TABLE 2-1: CHIP MODE CONFIGURATION STRAP**

Header	Description	Pins	Settings
J4,J5,J7,J8	Chip mode configuration strap inputs. This strap determines the number of active ports and port types.	1-2 2-3	Short 1-2 for high (pull-up) (Not supported in this EVB) Short 2-3 for low (pull-down) (default)

**Note:** This EVB supports Chip mode 00 which is 2-port mode, where Port 0 = PHY A and Port 1 = PHY B. This requires J4, J5, J7, and J8 to be pulled-down (2-3) shorted. All other configurations are not supported by this EVB.

### 2.4.1.2 EEPROM SIZE CONFIGURATION

The EEPROM size configuration strap (J6 & J9) determines the supported EEPROM size range. A low selects 1Kbits (128 x 8) through 16Kbits (2K x 8)\_24C16. A high selects 32Kbits (4K x 8) through 512Kbits (64K x 8) or 4Mbits (512K x 8)\_24C512.

**TABLE 2-2: EEPROM SIZE CONFIGURATION STRAP**

Header	Description	Pins	Settings
J6, J9	EEPROM size configuration strap inputs. This strap determines the supported EEPROM size range.	1-2 2-3	Short 1-2 for high (pull-up) (default) Short 2-3 for low (pull-down)

### 2.4.1.3 COPPER AND FIBER STRAPS

The LAN9252 supports 100BASE-TX (Copper) and 100BASE-FX (Fiber) modes. In 100BASE-FX operation, the presence of the receive signal is indicated by the external transceiver as either an open-drain, CMOS level, Loss of Signal (SFP) or a LVPECL Signal Detect (SFF).

This EVB supports 100BASE-TX (Copper) and SFP 100BASE-FX (Fiber) modes. By default Copper Mode is active. Fiber Mode is supported as an assembly option. To select the Copper or Fiber Mode, the respective strap and signal routing resistor assembly options must to be configured.

**Note:** Vendor part number for SFP: Finisar/FTLF1217P2

# Board Details & Configuration

## 2.4.1.3.1 Copper Mode

The EVB-LAN9252-DIGIO is set to Copper Mode by default. Table 2-3 details the required strap resistor settings for Copper Mode operation.

**TABLE 2-3: COPPER MODE STRAP RESISTORS**

Resistors	Description
R79 (10K)	Configures Port 0 & 1 to Copper Mode
R76, R80 (10K)	Configures Port 0 and Port 1 to Copper Mode, respectively

**Note:** R75, R77, and R78 must not be populated (DNP).

Additionally, the signal routing resistors detailed in Table 2-4 must be assembled for Copper Mode operation.

**TABLE 2-4: COPPER MODE SIGNAL ROUTING RESISTORS**

Resistors	Description
R17, R19, R21, R23	Port 0 Copper Mode enabled
R31, R33, R35, R37	Port 1 Copper mode enabled

**Note:** R16, R18, R20, R22, R30, R32, R34, and R36 (0402 package) must not be populated (DNP).

## 2.4.1.3.2 Fiber Mode

The EVB-LAN9252-DIGIO supports SFP type 100BASE-FX. To enable Fiber Mode, the respective strap and signal routing resistors must be configured.

**Note:** Copper Mode related resistors must be DNP while Fiber Mode is active (See **Section 2.4.1.3.1 “Copper Mode”**).

Table 2-5 details the required strap resistor settings for Fiber Mode operation.

**TABLE 2-5: FIBER MODE STRAP RESISTORS**

Resistors	Description
R77 (10K)	Configures Port 0 & 1 to FX-LOS Mode
R75, R78 (10K)	Configures Port 0 and Port 1 to Fiber Mode, respectively

**Note:** R76, R79, and R80 must not be populated (DNP).

Additionally, the signal routing resistors detailed in Table 2-6 must be assembled for Fiber Mode operation.

**TABLE 2-6: FIBER MODE SIGNAL ROUTING RESISTORS**

Resistors	Description
R16, R18, R20, R22	Port 0 Fiber Mode enabled
R30, R32, R34, R36	Port 1 Fiber mode enabled

**Note:** R17, R19, R21, R23, R31, R33, R35, and R37 (0402 package) must not be populated (DNP).

## 2.4.1.3.3 FX-LOS Fiber Mode Strap

FX-LOS strap details are shown in Table 2-7. These strap settings determine if the ports are to operate in FX-LOS Fiber Mode or FX-SD/Copper Mode.

**TABLE 2-7: FX-LOS MODE STRAP SETTINGS**

R77 (10K)	R79 (10K)	Reference Voltage (V)	Function
Populate	DNP	3.3	A level above 2V selects FX-LOS for Port 0 and Port 1
Populate	Populate	1.5	A level greater than 1.5V and below 2V selects FX-LOS for Port 0 and FX-SD / copper twisted pair for Port 1, further determined by FXSDB
DNP	Populate	0 (Default)	A level of 0V selects FX-SD / copper twisted pair for Ports 0 and 1, further determined by FXSDA and FXSDB

**Note:** The above strap details describe the LAN9252 function. This EVB does not support SFF Fiber Mode. Therefore, FX-SD related straps are not applicable.

## 2.4.2 LED Indicators

The D3 and D4 LEDs are used to indicate the Link/Activity status on the corresponding EVB ports, as detailed in Table 2-8. The Link/Act LED should be ON at each port when the cable is present. If the Link/Act LED is not ON, it indicates there is an issue with the connection or cable.

**TABLE 2-8: D3 AND D4 LINK/ACTIVITY LED STATUS INDICATORS**

State	Description
Off	Link is down
Flashing Green	Link is up with activity
Steady Green	Link is up with no activity

Additionally, the D5 LED is used as a RUN indicator (green) to show the AL status of the EtherCAT® State Machine (ESM), as detailed in Table 2-9.

**TABLE 2-9: D5 RUN LED STATUS INDICATOR**

State	Description
Off	The device is in the INITIALIZATION state
Blinking (on 200ms, off 200ms)	The device is in the PRE-OPERATIONAL state
Single Flash (on 200ms, off 1000ms)	The device is in the SAFE-OPERATIONAL state
On	The device is in the OPERATIONAL state
Flickering (on 50ms, off 50ms)	The device is booting and has not yet entered the INITIALIZATION state, or the device is in the BOOTSTRAP state and firmware download is in progress. (Optional. Off when not implemented.)

## 2.4.3 EEPROM Switch

The EVB-LAN9252-DIGIO utilizes 0x50 (7-bit) I<sup>2</sup>C slave addressing. The SW3 switch can be used to select the A0, A1, and A2 address bits, as shown in Figure 2-2 and Table 2-10. The eighth bit of the slave address determines if the master device wants to read or write to the EEPROM (24C512).

**FIGURE 2-2: SLAVE ADDRESS ALLOCATION**

**TABLE 2-10: EEPROM SWITCH**

Switch	Description	Settings
SW3	I2C EEPROM address selection switch (A0, A1, A2). See Figure 2-2.	ON for logic 0 (default) OFF for logic 1

## 2.4.4 DIG INPUT Mode

The DIG INPUT Mode can be selected through the headers J10 and J11:

- Logic 1 : (Default) SW4 & SW5 Off position. DIG I/P 0 to 15 tied to pull-up (R98 to R113)
- Logic 0 : The respective knob of 2-way, 8-position dip switch (SW4 & SW5) need to be moved to ON position. Signals can be selected individually.

**TABLE 2-11: DIGITAL I/O INPUT MODE SELECTION**

Header	Description	Short Pins
J10	Digital Input 0 to 7	1&2, 4&5, 7&8, 10&11, 13&14, 16&17, 19&20, 22&23
J11	Digital Input 8 to 15	1&2, 4&5, 7&8, 10&11, 13&14, 16&17, 19&20, 22&23

## 2.4.5 DIG OUTPUT Mode

The DIG OUTPUT Mode can be selected through the headers J10 and J11. The updated Digital I/O values can be seen on the LEDs (D6 to D21):

- Logic 1 : LED illuminated
- Logic 0 : LED not illuminated.

**Note:** LED (D6 to D21) anode connected to ASIC.

**TABLE 2-12: DIGITAL I/O OUTPUT MODE SELECTION (DEFAULT MODE)**

Header	Description	Short Pins
J10	Digital I/O 0 to 7	2&3, 5&6, 8&9, 11&12, 14&15, 17&18, 20&21, 23&24
J11	Digital I/O 8 to 15	2&3, 5&6, 8&9, 11&12, 14&15, 17&18, 20&21, 23&24

**Note:** The control signal OE\_EXT should be connected high by shorting J12 pins 15 and 16.

**2.4.6 DIG Bidirectional Mode**

The DIG Bidirectional Mode can be selected by shorting the respective test point pins with the headers J10 and J11, as detailed in Table 2-13. The input and output signal states in this mode are the same as detailed in **Section 2.4.4 “DIG INPUT Mode”** and **Section 2.4.5 “DIG OUTPUT Mode”**.

**TABLE 2-13: DIGITAL I/O BIDIRECTIONAL MODE DESCRIPTION**

Description	Short Pins
Digital I/O 0 to 7	TP5 & J10.1, TP6 & J10.4, TP7 & J10.7, TP8 & J10.10 TP9 & J10.13, TP10 & J10.16, TP11 & J10.19, TP12 & J10.22, TP13&J10.3, TP14&J10.6, TP15&J10.9, TP16& J10.12, TP17&J10.15, TP18&J10.18, TP19& J10.21, TP20&J10.24
Digital I/O 8 to 15	TP21 & J11.1, TP22 & J11.4, TP23 & J11.7, TP24 & J11.10, TP25 & J11.13, TP26 & J11.16, TP27 & J11.19, TP28 & J11.22, TP29&J11.3, TP30&J11.6, TP31&J11.9, TP32& J11.12, TP33&J11.15, TP34&J11.18,TP35& J11.21, TP36&J11.24

**2.4.7 Control Signals**

All control signals can be probed and controlled via the J12 header, as shown in Table 2-14.

**TABLE 2-14: J12 HEADER CONTROL SIGNAL MAPPING**

J12 Pin Number	J12 Signal	J12 Pin Number	J12 Signal
1	3V3	2	3V3
3	WD_STATE	4	GND
5	EOF	6	GND
7	SOF	8	GND
9	LATCH0	10	GND
11	LATCH1	12	GND
13	WD_TRIG	14	GND
15	OE_EXIT	16	3V3
17	OUTVALID	18	GND
19	LATCH_IN	20	GND

**Note:** J12 pins 15 & 16 must be shorted in output mode.

**2.4.7.1 WD\_STATE**

This pin is the SyncManager Watchdog State output. A “0” indicates the watchdog has expired. The state of this signal can be seen in the LED D22.

**Note:** This signal is not driven (high impedance) until the EEPROM is loaded.

**2.4.7.2 LATCH\_IN**

This pin is the external data latch signal. The input data is sampled each time a rising edge of LATCH\_IN is recognized. By default, this signals is pulled high through R131and can be made low using switch SW6.

## 2.5 MECHANICALS

## Chapter 3. LAN9252 EEPROM Programming

---

---

### 3.1 PROGRAMMING THE LAN9252 EEPROM

The LAN9252 configures itself to the desired mode (SPI, 6 HBI modes) by reading the strap settings located in EEPROM. The LAN9252 EEPROM is programmed and validated via the TwinCAT master tool. The programming procedure is as follows:

- Note 1:** This example utilizes the TwinCAT tool. Procedures may differ when using other EtherCAT® master tools.
- 2:** Ensure the system network properties are configured properly for the EtherCAT® frames, Ethernet cable linking your system, and EtherCAT® slave board.
1. Load the corresponding ESI file in the directory path “C:\TwinCAT\Io\EtherCAT”. For this demo, the ESI file for the 16-Bit Multiplexed Single-Phase Mode is used.
  2. If TwinCAT installed successfully, a TwinCAT icon will be shown in the bottom-right corner of the desktop. After clicking the icon, a pop-up list will display. Select “System Manager”, as shown in Figure 3-1.

**FIGURE 3-1: TWINCAT SYSTEM MANAGER**

# LAN9252 EEPROM Programming

3. If any devices are present, delete them accordingly by clicking the device and selecting “Delete Device”, as shown in Figure 3-2.

**FIGURE 3-2: TWINCAT DELETE DEVICE**

4. Scan for EtherCAT® slave devices by clicking “I/O devices” and selecting “Scan Devices”, as shown in Figure 3-3.

**FIGURE 3-3: TWINCAT SCAN DEVICES**

5. After scanning is complete, the right panel of the TwinCAT window will appear as shown in Figure 3-4.

**FIGURE 3-4: TWINCAT DEVICE LIST**

6. After a successful scan, click the “Device 2 (EtherCAT)” drop down bar on the left panel of the TwinCAT tool (as highlighted in Figure 3-4). Then click the “Online” tab on the right-side panel of the TwinCAT tool, as shown in Figure 3-5. Right click the LAN9252 listing and select “EEPROM Update” from the contextual menu.

**FIGURE 3-5: TWINCAT EEPROM UPDATE**

7. Upon selecting “EEPROM Update”, the Write EEPROM window will open. Click the “OK” button to initiate EEPROM programming.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
